

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

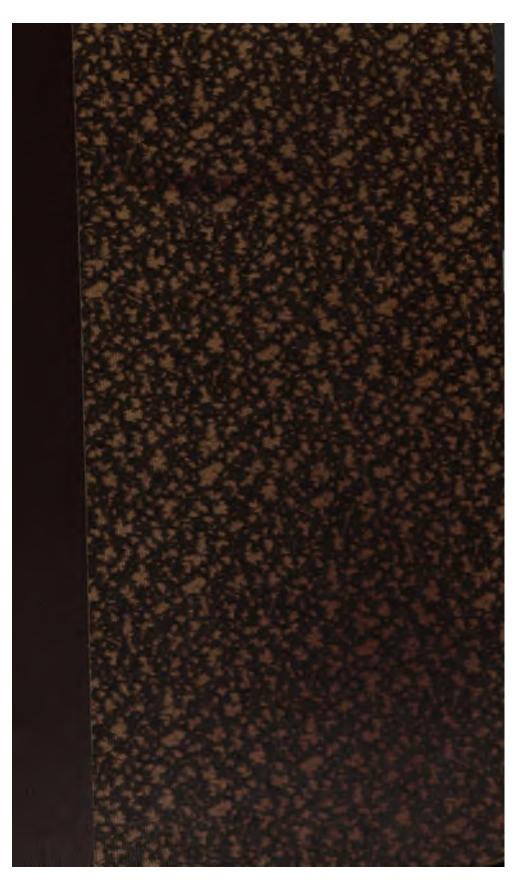

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. In Part I.

pp. 270-297. In addition to the arguments there adduced to shew that the ancient sound of long i was (ii) or (ii), and not (ei, ai, ei), Mr. James A. H. Murray has communicated to me some striking proofs from the Gaelic forms of English words and names, and English forms of Gaelic names, which will be given in Part IV.

p. 302, l. 14, blue is erroneously treated as a French word, but in the Alpha-BETICAL LIST on the same page it is correctly given as anglosaxon. The corrections which this oversight renders necessary will be given in Part IV., in the shape of a cancel for this page, which could not be prepared in time for this Part.

In Part II.

p. 442, Paternoster, col. 2, vv. 4 and 8, for don, mis'doon' read doon, mis'doon'.
p. 443, Credo 1, col. 2, ll. 4 and 7, for laverd, ded, read laaverd, deed; Credo 2, col. 2, line 4, for loverd read looverd.

p. 462, verses, 1. 2, for Richard read Richard.

pp. 464-5. On the use of f for 3, and the possibility of 3 having been occasionally confused with (s) in speech, Mr. W. W. Skeat calls attention to the remarks of Sir F. Madden, in his edition of Lajamon, 3, 437.

p. 468, Translation, col. 2, l. 4, for hil read hill.

p. 473, note, col. 2, l. 1, for 446 read 447; l. 17, for (mee, dee, swee, pee) read (mee, dee, swee, pee); l. 18, for may read May; l. 24-5 for (eint mynt) read (eint ment).

saungur (maan sœœiq gər).

p. 550, Mr. H. Sweet has communicated to me the sounds of Icelandic letters as noted by Mr. Melville Bell from the pronunciation of Mr. Hjaltalin, which will be given in Part IV.

p. 553, verse 30, col. 1, l. 4, for alikalfii read alikalfi; col. 2, l. 4, for aa likaaul vi read aa likaaul vi.

p. 559, in the Haustlöng; l. l, for er read es, l. 2, for er read es; l. 4, for bauge read baugi; l. 5, for Hel'lesbror...bauge read Hel'lesbror...bauge; line 7, for isarnleiki read isarnleiki.

p. 560, note 1, l. 2, for longr read langr.
p. 599, col. 2, l. 14, for demesne read demesne.
p. 600, col. 1, l. 6, for Eugene read Eugene.

p. 614, Glossotype as a system of writing is superseded by Glossic, explained in the appendix to the notice prefixed to Part III.

p. 617, col. 2, under n, l. 4, for lpand read pland.

In Part III.

p. 639, note 2 for (spii·seli, spes·eli) read (spii·sheli, spesh·eli).

p. 651. The numbers in the Table on this page are corrected on p. 725. p. 653, note 1. The memoir on Pennsylvania German by Prof. S. S. Haldeman, was read before the Philological Society on 3 June, 1870, and will be published separately; Dr. Mombert, having gone to Europe, has not furnished any additions to that memoir, which is rich in philological interest.

p. 680 to p. 725. Some trifling errors in printing the Critical Text and Pronun-

ciation of Chaucer's Prologue are corrected on p. 724, note. p. 754, note 1, for (abitee shun) read (abitaa siun).

p. 789, col. 1, the reference after +amat should be 7594.

p. 791, col. 2, under much good do it you, for mychyoditio read mychgoditio; and

to the references add, p. 938, note 1. pp. 919-996. All the references to the Globe Shakspere relate to the issue of 1864, with which text every one has been verified at press. For later issues, the number of the page (and page only) here given, when it exceeds 1000, must be diminished by 3, thus VA 8 (1003), must be read as VA 8 (1000), and PT 42 (1057'), must be read as PT 42 (1054'). The cause of this difference is that pages 1000, 1001, 1002, in the issue of 1864, containing only the single word Poems, have been cancelled in subsequent issues.

NOTICE.

Indisposition, arising from overwork, has greatly delayed the appearance of this third part of my work, and a recent relapse, rendering the revision of the last seventy pages and the preparation of this notice extremely difficult, has compelled me to postpone to the next part the illustrations for the xvII th and xvIII th centuries, which were announced to be included in the present. Three years or more will probably elapse before the remainder of the book can

be published.

The fourth and concluding part of this treatise is intended to consist of four chapters, two of which, devoted to the xvn th and IVIII th centuries respectively, are now completely ready for press, and will therefore certainly appear either under my own or some other superintendence. In chapter XI., I am desirous of giving some account of Existing Varieties of English Pronunciation, dialectic, antiquated, American, colonial, and vulgar, for the purpose of illustrating the results of the preceding investigation. This cannot be properly accomplished without the extensive co-operation of persons familiar with each individual dialect and form of speech. invite all those into whose hands these pages may fall to give me their assistance, or procure me the assistance of others, in collecting materials for this novel and interesting research, which promises to be of great philological value, if properly executed. Many hundred communications are desirable. There cannot be too many, even from the same district, for the purpose of comparison and control. As I hope to commence this examination early in 1872, it will be an additional favour if the communications are sent as soon as possible, and not later than the close of 1871. They should be written on small-sized paper, not larger than one of these pages, and only on one side, leaving a margin of about an inch at the top for reference notes, with the lines wide apart for insertions, and all the phonetic part written in characters which cannot be misread. Correspondents would much add to the value of their communications by giving their full names and addresses, and stating the opportunities they have had for collecting the information For the purpose of writing all English dialects in one alphabet on an English basis, I have improved the Glossotype of Chapter VI., and append its new form under the name of Glossic, with specimens which will shew the reader how to employ it, (pp. xiii–xx.) For the sake of uniformity and general intelligibility, I should feel obliged if those who favour me with communications on this subject would represent all peculiarities of pronunciation in the Glossic characters only, without any addition or alteration whatever. The little arrangements here suggested will, if carried vi NOTICE.

out, save an immense amount of labour in making use of any communications.

The following table will shew the kind of work wanted. All the varieties of sound there named are known to exist at present, and there are probably many more. It is wished to localize them accurately, for the purpose of understanding the unmixed dialectic English of the XII th and XIII th centuries, and to find traces of the pronunciations prevalent in the more mixed forms of the xIV th, xvith, and xviith centuries. Many of the latter will be found in Ireland and America, and in the 'vulgar' English everywhere. No pronunciation should be recorded which has not been actually heard from some speaker who uses it naturally and habitually. The older peasantry and children who have not been at school preserve the dialectic sounds most purely. But the present facilities of communication are rapidly destroying all traces of our older dialectic English. Market women, who attend large towns, have generally a mixed style of speech. The daughters of peasants and small farmers, on becoming domestic servants, learn a new language, and corrupt the genuine Doric of their parents. Peasants do not speak naturally to strangers. The ear must also have been long familiar with a dialectic utterance to appreciate it thoroughly, and, in order to compare that utterance with the Southern, and render it correctly into Glossic, long familiarity with the educated London speech is Resident Clergymen, Nonconformist Ministers, also necessary. National and British Schoolmasters, and Country Gentlemen with literary tastes, are in the best position to give the required information, and to these, including all members of the three Societies for whom this work has been prepared, I especially appeal. number of persons more or less interested in our language, who have opportunities of observing, is so great, that scarcely any one who reads these lines will be unable to furnish at least a few observations, and it should be borne in mind that even one or two casual remarks lose their isolated character and acquire a new value when forwarded for comparison with many others. It is very desirable to determine the systems of pronunciation prevalent in the Northern, West and East and Central Midland, South Western, South Eastern, and purely Eastern dialects. The Salopian, Lincolnshire, and Kent Dialects are peculiarly interesting. Mr. James A. H. Murray's learned and interesting work on Lowland Scotch (London, Asher, 1871) will shew what is really wanted for each of our dialectic systems.

In the following, unfortunately very imperfect, Table a few suggestive words are added to each combination of letters, and the presumed varieties of pronunciation are indicated both in Glossic and Palaeotype, but only in reference to the particular combinations of letters which head the paragraph. The symbols placed after the sign =, shew the various sounds which that combination of letters is known to have in some one or other of the exemplificative words, in some locality or other where English is the native language of the speaker. In giving information, however, the whole

word should be written in Glossic, as considerable doubt may attach to local pronunciations of the other letters, and the name of the locality, and of the class of speakers, should be annexed. The quantity of the vowel and place of the accent should be given in every word, according to one of the two systems explained in the Key to Universal Glossic, p. xvi, and exhibited on pp. xix and xx. In writing single words, the accentual system, used on p. xx, is preferable. Great attention should be paid to the analysis of diphthongs, and the Glossic ei, oi, ou, eu, should only be employed where the writer, being unable to analyse the sound accurately, confines himself to marking vaguely the class to which it belongs. The trilled r when occurring without a vowel following should always be carefully marked, and the untrilled r should never be marked unless it is distinctly heard. Each new word, or item of information, should commence on a new line. Thus:

cord kaa-d or kaad Bath, workmen, petty traders, etc.

card ka'd or kád Bath, as before.

beacon bai kn or baikn Bath, as before.

key kai or kai Bath, as before.

fair feir or fay er fayer fayu' Bath, country farming man.

Sentences constructed like those of French, German, and Teviotdale in Glossic, p. xix, to accumulate all the eculiarities of dialectic utterances in a

district.

Every peculiar sentence and word should be written fully in Glossic, and have its interpretation in ordinary language and spelling, as literal as possible, and peculiar constructions should be explained.

Comparative Specimen.

In order to compare different dialects, it is advisable to have one passage written in the idiom and pronunciation of all. Passages from the Bible are highly objectionable. Our next most familiar book is, perhaps, Shakspere. The fol-lowing extracts from the *Two Gentle-*men of *Verona*, act 3, sc. 1, sp. 69-133, have been selected for their rustic tone, several portions having been omitted as inappropriate or for brevity. Transla-tions into the proper words, idiom, and pronunciation of every English dialect would be very valuable.

The Milkmaid, her Virtues and Vices.

Launce. He lives not now that knows me to be in love. Yet I am in love. But a team of horse shall not pluck that from me, nor who 'tis I love-and yet 'tis a woman. what woman, I will not tell myselfand yet 'tis a milkmaid. Here is a cate-log of her condition. 'Imprimis: She can fetch and carry.' Why a horse can do no more; nay, a horse cannot fetch, but only carry; there-fore is she better than a jade. 'Item: She can milk;' look you, a sweet virtue in a maid with clean hands.

Speed. How now! what news in your paper P

Launce. The blackest news that ever thou heardest.

Speed. Why, man, how black? Launce. Why, as black as ink. Speed. Let me read them.

Launce. Fie on thee, jolt-head ! thou canst not read.

Speed. Thou liest; I can. Come,

fool, come; try me in thy paper.

Launce. There; and Saint Nicholas

be thy speed!

Speed. [reads] 'Imprimis: she can milk.'

Launce. Ay, that she can.
Speed. 'Item: she brews good ale.' Launce. And thereof comes the proverb: 'Blessing of your heart, you brew good ale.

Speed. 'Item: she can sew.'
Launce. That's as much as to say, Can she so?

Speed. 'Item: She can wash and

scour.' Launce. A special virtue; for then

she need not be washed and scoured. Speed. 'Item: she can spin.'
Launce. Then may I set the world

on wheels, when she can spin for her living.

'Here follow her vices.' Speed. Launce. Close at the heels of her virtues.

Speed. 'Item: she doth talk in her sleep.'

Launce. It's no matter for that, so

she sleep not in her talk.

Speed. 'Item: she is slow in words.' Launce. O villain, that set down among her vices! To be slow in words is a woman's only virtue: I pray thee, out with't, and place it for her chief virtue.

Speed. 'Item: she is proud.'

Launce. Out with that too; it was Eve's legacy, and cannot be ta'en from

Speed. 'Item: she will often praise her liquor.'

Launce. If her liquor be good, she shall; if she will not, I will; for good things should be praised.

Speed. 'Item: she hath more hair than wit, and more faults than hairs,

and more wealth than faults.' Launce. Stop there; I'll have her; she was mine, and not mine, twice or thrice in that last article. Rehearse Rehearse that once more.

Speed. 'Item: She hath more hair than wit.'

Launce, More hair than wit? It may be; I'll prove it. The cover of the salt hides the salt, and therefore it is more than the salt: the hair that covers the wit is more than the wit, for the greater hides the less. What's next? Speed. 'And more faults than hairs.' Launce. That's monstrous: O, that

that were out!

Speed. 'And more wealth than faults.' Launce. Why, that word makes the faults gracious. Well, I'll have her: and if it be a match, as nothing is impossible,-

Speed. What then?
Launce. Why, then will I tell thee that thy master stays for thee at the North-gate.

Speed. For me?

Launce. For thee! ay, who art thou?

he hath stayed for a better man than

Speed. And must I go to him?

Launce. Thou must run to him, for thou hast stayed so long, that going will

scarce serve the turn.

Speed. Why didst thou not tell me sooner? pox of your love-letters!

[Exit. Launce. Now will he be swinged for reading my letter—an unmannerly slave, that will thrust himself into secrets! I'll after, to rejoice in the boy's correction.

Of course it would be impossible to enter upon the subject at great length in Chapter XI. The results will have to be given almost in a tabular form. But it is highly desirable that a complete account of our existing English language should occupy the attention of an ENGLISH DIALECT SOCIETY, and I solicit all correspondents to favour me with their views on this subject, and to state whether they would be willing to join such a body. At the same time I must request permission, owing to the necessity of mental repose on this subject, to abstain from more than simply acknowledging the receipt of their communications during 1871.

In Chap. XII. I hope to consider the various important papers which have recently appeared, bearing upon the present investigations, especially those by Dr. Weymouth, Mr. Payne, Mr. Murray, Mr. Furnivall, and Herr Ten Brink, together with such criticisms on my work as may have appeared before that chapter is printed. Any reader who can point out apparent errors and doubtful conclusions, or who can draw my attention to any points requiring revision, or supply omissions, or indicate sources of information which have been overlooked, will confer a great favour upon me by communicating their observations or criticisms within the year 1871, written in the manner already suggested. The object of these considerations, as of my whole work, is, not to establish a theory, but to approximate as closely as possible to a recovery of Early English Pronunciation.

Those who have read any portion of my book will feel assured that no kind assistance that may thus be given to me will be left unacknowledged when published. And as the work is not one for private profit, but an entirely gratuitous contribution to the history of our language, produced at great cost to the three Societies which have honoured me by undertaking its publication, I feel no hesitation in thus publicly requesting aid to make it more worthy of the

generosity which has rendered its existence possible.

ALEXANDER J. ELLIS.

Appendix to the Notice prefixed to Part III.

${f GLOSSIC}$

A NEW SYSTEM OF SPELLING, INTENDED TO BE USED CON-CURRENTLY WITH THE EXISTING ENGLISH ORTHOGRAPHY IN ORDER TO REMEDY SOME OF ITS DEFECTS, WITHOUT CHANGING ITS FORM, OR DETRACTING FROM ITS VALUE.

KEY TO ENGLISH GLOSSIC.

Read the large capital letters always in the senses they have in the following words, which are all in the usual spelling except the three underlined, meant for foot, then, rouge.

1	вЕЕт	вAІт	вАА	cAU	L C	OAL	COOL
ENIT		иEт	GNAT	иOт	N	·Uτ	r UOT
	1	EIGHT	FOLL	rO	$\mathbf{U}_{\mathbf{L}}$	FEU_D	
	Yra		Way	WHEY		HAY	
Pea	Bee	Tor	Dor	CHEST	Jest	KEEP	GAPE
FIE	$\mathbf{v}_{\mathbf{ie}}$	THIN	DHen	SEAL	ZEAI	RUSE	ROUZHE
1	raR 1	R'ING EA	RR'rve	LAY	MAY	NAT 8	ıNG

B is vocal when no vowel follows, and modifies the preceding vowel forming diphthongs, as in PEER, PAIR, BOAR, BOOR, HERB.

Use R for R' and RR for RR', when a vowel follows, except in elementary books, where r' is retained.

Separate th, dh, sh, sh, ng by a hyphen (-) when necessary. Read a stress on the first syllable when not otherwise directed.

Mark stress by (·) after a long vowel or ei, oi, ou, eu, and after the first consonant following a short vowel.

Mark emphasis by (*) before a word. Pronounce el, em, en, er, ej, a, obscurely, after the stress syllable.

When three or more letters come together of which the two first may form a digraph, read them as such. Letters retain their usual names, and alphabetical arrangement.

Words in customary or NOMIC spelling occurring among GLOSSIC, and conversely, should be underlined with a wavy line , and printed with spaist letters, or else in a different type.

BRIEF KEY TO THE VOWELS.

A as in English gnat.

(read ai-huok) fine southern English ask, between aa and e.

AA as in English baa.

AE usual provincial English e, French . German ä.

AH broad German ah, between aa & au. at as in English bait, with no aftersound of ee

AO open Italian o, between o and oa. so' closer sound of ao, not quite oa. AU as in English caul.

au' closer sound of au, as i in Irish sir.

E as in southern English net.

E' modification of e by vocal r in herb. ea Russian M. Polish y, variety of ee.

EO close French eu in peu, feu.

co' opener sound of co, not quite oc. I as in English knit.

I opener sound of i, not quite e, as e in English houses, Welsh u. o as in English not, opener than an.

o' a closer sound of o. oa as in English coal, with no after-

sound of oo. oa' closer sound of oa; u with lips

rounded.

OE open French eu in veuf, German o. oe' opener sound of oe.

oo as in English cool. v as in English nut.

U' obscure u, as o in English mention. us open provincial variety of u.

ue' slightly closer ua. UE French u, German ü.

wi provincial Ger. ü, nearly ee, Swed. y. wi' Swedish long u.

to as in English full, woman, book. uo' Swedish long o.

UU usual provincial variety of u. uu' Gaelic sound of ao in laogh; try to pronounce oo with open lips.

SPECIAL RULES FOR VOWELS.

Ascertain carefully the received pronunciation of the first 12 key words on p. xiii, (avoiding the after-sounds of ee and oo, very commonly perceptible after ai and oa). Observe that the tip of the tongue is depressed and the middle or front of the tongue raised for all of them, except u; and that the lips are more or less rounded for oo, no, oa, au, o. Observe that for i, e, uo, the parts of the mouth and throat behind the narrowest passage between the tongue and palate, are more widely opened than for ee, ai, oo.

Having ee quite clear and distinct, like the Italian, Spanish, French, and German i long, practise it before all the English consonants, making it as long and as short as possible, and when short remark the difference between ee and i, the French fini, and English finny. Then lengthen i, noticing the distinction between leap lip, steal still, feet fit, when the latter words are sung to a long note. Sustaining the sound first of ee and then of i, bring the lips together and open them alternately, observing the new sounds generated, which will be ui and ue. A proper appreciation of the vowels, primary ee wide i, round ui, wide round ue, will render all the others easy.

Obtain oo quite clear and distinct, like Italian and German u long, French ou long. Pronounce it long and short before all the English consonants. Observe the distinction between pool and pull, the former having oo, the latter uo. The true short oo is heard in French poule. English pull and French poule, differ as English finny and French fini, by widening. Observe that the back of the tongue is decidedly raised as near to the soft palate for oo, uo, as the front was to the hard palate for ee, i; and that the lips are rounded. While continuing to pronounce oo or uo, open the lips without moving the tongue. This will be difficult to do voluntarily at first, and the lips should be mechanically opened by the fingers till the habit is obtained. The results are the peculiar indistinct sounds un'

and w, of which w is one of our commonest obscure and unaccented sounds.

In uttering ee, ai, ae, the narrowing of the passage between the tongue and hard palate is made by the middle or front of the tongue, which is gradually more retracted. The ai, ae, are the French é, è, Italian e chiuso and e aperto. The last ae is very common, when short, in many English mouths. The widening of the opening at the back, converts ee, ai, ae, into i, e, a. Now e is much finer than ae, and replaces it in the South of England. Care must be taken not to confuse English a with aa. The true a seems almost peculiar to the Southern and Western, the refined Northern, and the Irish pronunciation of English. The exact boundaries of the illiterate a and aa have to be ascertained. Rounding the lips changes ee, ai, ae, into ui, eo, eo', of which eo is very common. Rounding the lips also changes i, e, a, into ue, oe, oe', of which oe is very common.

On uttering oo, oa, au, the back of the tongue descends lower and lower, till for au the tongue lies almost entirely in the lower jaw. The widening of these gives uo, ao, o. The distinction between au, o, is necessarily very slight; as is also that between ao and o. But ao is very common in our dialects, and is known as o aperto in Italy. primary forms of oo, oa, au, produced by opening the lips, are the obscure uu', uu, ua, of which uu is very common in the provinces, being a deeper, thicker, broader sound of w. But the wide sounds uo, ao, o, on opening the lips, produce u', aa, ah. Here aa is the true Italian and Spanish a, and ah is the deeper sound, heard for long a in Scotland and Germany, often confused with the rounded form au.

Of the mixed vowels, the only important primary vowel is u, for which the tongue lies flat, half way between the upper and lower jaw. It is as colourless as possible. It usually replaces uu in unaccented syllables, and altogether replaces it in refined South-ern speech. Its wide form a' is the modern French fine a, much used also for aa in the South of England. The rounded form on' seems to replace u or uu in some dialects. The mixed sound resulting from attempting to utter ah and a together is e', which Mr. Bell considers to be the true vowel in herd.

Distinctions to be carefully drawn in

writing dialects. EE and I. AI and E. AE and E. AA, AH and A. OA and AO. AO, AU and AH. OO and UO. UU and U. UI, UE and EEW, IW, YOO. UE and EO. OE and U.

QUANTITY OF VOWELS.

All vowels are to be read short, or medial, except otherwise marked.

The Stress (·) placed immediately after a vowel shews it to be long and accented, as august; placed immediately after a consonant, hyphen (-). gap (:), or stop (..), it shews that the preceding vowel is short and accented, as august, aamao:', pa'pa' ...

The Holder (*) placed immediately after a vowel or consonant shews it to be long, as aw gust, needle; the Stress Holder (") shews that the consonant it follows, is held, the preceding vowel being short and accented, compare hap'i, hap"i, hapi, harp'i; in theoretical writing only. Practically it is more convenient to double a held consonant, as hap i, hap pi, ha ppi.

Stop (..) subjoined to any letter indicates a caught-up, imperfect utter-ance, as ka.., kat.. for kat; great abruptness is marked by (...)

Accent marks may also be used when preferred, being placed over the first letter of a combination, thus:

with stress—āa. āa āa āa āa If the first letter is a capital the accent marks may be placed on the second, as August, august, kaazaa.

SYSTEMATIC DIPHTHONGS.

The stressless element of a diphthong is systematically indicated by a preceding turned comma (') called hook, as m'eeai'ee It. miei, Laa'ooraa It. Laura, p'aaoo raa It paura, l'ueee Fr. lui. But when, as is almost always the case, this element is 'ee 'oo, or 'ue, it may be replaced by its related consonant y, w or w, as myaiy, Laavraa, l, wee. Any obscure final element as 'u, 'e, 'e', is sufficiently expressed by the sign of simple voice h', as provincial nech't night, streeh'm stream wih'kn waken. In applying the rule for marking stress and quantity, treat the stressless element as a consonant.

The four English Glossic diphthongs BI, OI, OU, BU are unsystematic, and are variously pronounced, thus:

Ex is my in the South, sometimes a'y,

say; and is often broadened to suy,

ahy, su'y, in the provinces.
or is oy in the South, and becomes swy,

provincially.
Ou is no in the South, sometimes a'w, saw, and is often broadened to uww ahw, oaw, aow; it becomes os,w in Devonshire, and aew in Norfolk.

EU varies as iso, eero, yoo, yiso, yeero.

The Londoners often mispronounce

AI as si'y, siy, sy or nearly uy, and oa as oa.w., oaw, ow or nearly uw.

English vocal R, is essentially the same as H', forming a diphthong with the preceding vowel. Thus English glossic peer, pair, boar, boor, fer, diferring, are systematic pi'h', pe'h', bao'h', bao'h', fe'h' or fu', dife'h' ring or difu ring. But r is used where r', or rr', or h'r' may be occasionally heard.

CONSONANTS.

Differences from English Glossic consonants are marked by adding an h in the usual way, with y' for palatals, and w' for labials, by subjoining an apostrophe (') or by prefixing a turned comma ('), a turned apostrophe (,), or a simple comma (,).

Simple consonants, and added G. Y, W, H; P B, T D, J, K G, P V, S Z, vocal R, L M N, NG.

Added H.

WH, CH, TH DH, SH ZH. KH, GH German ch, g in Dach, Tage; YH, R'H, LH, MH, NH, NGH are the hissed voiceless forms of y, r', l, m, n, ng.

Added Y' and YH.

TY', DY', KY',GY', LY', NY', NGY', are palatalised or mouillé varieties of t, d, k, g, l, n, ng, as in virtue, verdure, old eart, old guard, Italian gl, gn, vulgar French, il n'y a pas = ngy'aa pah. LYH is the hissed voiceless form of LY.

KYH, GYH are palatal varieties of KH, GH as in German ich, fliege.

Added W' and WH.

TW', DW', KW', GW', RW', R'W' LW', NW', &c., are labial varieties

of t, d, k, g, r, r', l, n, &c., produced by rounding the lips at or during their utterance, French toi, dois, English quiet, quano, our, French roi, loi, noix, &c. KWH, GWH are labial varieties of

KH, GH as in German auch, saugen, and Scotch qub. HWH is a whistle.

Added apostrophe (') called " Hook."

H' called aich-huok, is the simplest emission of voice: H'W' is h' with rounded lips; H'WH a voiced whistle.

T', D', called tee-huok, dee-huok, dental t, d, with tip of tongue nearly between teeth as for th, dh.

F', V', called ef-huok, vee-huok, toothless f, v, the lip not touching the teeth; v' is true German w.

R', or R before vowels, is trilled r. N' read en-huok, French nasal n, which nasalizes the preceding vowel. To Englishmen the four French words vent, vont, vin, un sound von', voan', van', un'; but Frenchmen take them as vahn', voan', vaen', oen'. Sanscrit unuosvaa,ru.

K', G' peculiar Picard varieties of

ky', gy', nearly approaching ch, j.
CH', J', TS', DZ' monophthongal
Roman varieties of ch, j, ts, dz.
T'H, D'H lisped varieties of s, z, imitating th, dh; occasional Spanish

S' not after t, Sanscrit visu rgu.

Prefixed comma (,), called "Comma."

,H read koma-aich, lax utterance, opposed to .H.

,T ,D read koma-tee, koma-dee peculiar Sardinian varieties of t, tongue being much retracted.

,L Polish barred l, with ,LH its voice-less, ,LW' its labial, and ,LWH its voiceless labial forms.

; read hamza, check of the glottis.

Prefixed turned comma (1), called " Hook."

! read ein, the Arabic !aayn or bleat. 'H, 'T 'D, 'S 'Z, 'K, read huok-aich, huok-tee, &c.; peculiar Arabic varieties of h, t, d, s, z, k; G the voiced form of 'K.

'KH, 'GH, called huok-kai-aich, huokjee-aich; the Arabic kh, gh pronounced with a rattle of the uvula.

'W, 'PR, 'BR, read huok-dubl-eu, &c.; lip trills, the first with tight and the others with loose lips; the first is the common English defective w for r', as ve'wi t'woo, the last is used for stopping horses in Germany.

'R read huok-aar, the French r grasseyé, and Northumberland burr or k'ruop ='gh+; 'RH its voiceless form.

1, 'L, read huok-el-aich, huok-el,

Welsh II, and its voiced Manx form. F, 'V, read huok-ef &c.; f, v with back of tongue raised as for oo.

Prefixed turned apostrophe (), called " Curve."

.AA, read kerv-aa, an aa pronounced through the nose, as in many parts of Germany and America, different from aan', and so for any vowel, oh, or h'.

T.D., SH, R. L., N read kerv-tee &c., Sanscrit "cerebral" t, d, sh, r', l, n; produced by turning the under part of the tongue to the roof of the mouth and attempting to utter t, d,

sh, r', l, n. H read kerv-aich, a post aspiration, consisting of the emphatic utterance of the following vowel, in one syllable with the consonant, or an emphatically added final aspirate after a consonant. Common in Irish-English, and Hindoostaanee.

W is the consonant related to ue, as to is to oo.

Clicks, -spoken with suction stopped.

C, tongue in t position, English tut!

Q, tongue in t position. X, tongue in ty position, but unilateral, that is, with the left edge clinging to the palate, and the right free, as in English clicking to a horse. C, q, x, are used in Appleyard's Caffre.

QC, tongue in ty position, but not unilateral; from Boyce's Hottentot. KC, tongue retracted to the 'k position and clinging to the soft palate.

Whispers or Flats.

°H, called serkl-aich, simple whisper; °H' whisper and voice together "H' diphthongal form of "h'.

AA, read serkl-aa, whispered aa, and so for all vowels.

B, D, read serkl-bee etc., the sound of b, d, heard when whispering, as distinct from p, t, common in Saxony when initial, and sounding to Englishmen like p, t when standing for b, d, and like b, d when standing for p, t. °G, whispered g, does not occur in Saxony.

°V, °DH, °Z, °ZH, °L, °M, °N read

serkl-vee etc., similar theoretical English varieties, final, or interposed between voiced and voiceless letters.

TONES.

The tones should be placed after the Chinese word or the English syllable to which they refer. They are here, for convenience, printed over or un-der the vowel o, but in writing and printing the vowel should be cut out.

o, o, high or low level tone, p, hing 6, 9, tone rising from high or low pitch,

shaang'.

g rise and fall, (that is, foo-kyen shaang',) or fall and rise.

ò, o falling tone to high or low pitch, kyoo' or k hoe'.

č, o sudden catch of the voice at a high or low pitch, shoo, zhee, nyip, or yaap.

SIGNS.

Hyphen (-), used to separate combinations, as in mis-hap, in-got. In whair-ever, r is vocal; elm fauln are monosyllables, el-m, faul-n are dissyllables; fidler has two syllables, fidl-er three syllables.

Divider), occasionally used to assist the reader by separating to the eye, words not separated to the ear, as

tel)er dhat)l doo.

Omission (,), occasionally used to assist the reader by indicating the omission of some letters usually pronounced, as hee) I doo) t.

Gap (;) indicates an hiatus. Closure (.) prefixed to any letter indicates a very emphatic utterance as

mei .hei for my eye.

Emphasis (·) prefixed to a word, shews that the whole word is more emphatically uttered, as ei 'neu dhat 'dhat dhat 'dhat man sed woz rong; ei gaiv 'too thingz too 'too men, and · hee gair 'too, 'too, too 'too, 'too

The following are subjoined to indicate, I emission, ; suction, ¿ trill of the organs implicated, † inner and 4 outer position of the organs implicated, ‡ tongue protruded, § unilate-rality, • linking of the two letters between which it stands to form a third sound, (extreme faintness.

CHAPTER VII.

ILLUSTRATIONS OF THE PRONUNCIATION OF ENGLISH DURING THE FOURTEENTH CENTURY.

§ 1. Chaucer.

CRITICAL TEXT OF PROLOGUE.

In accordance with the intimation on p. 398, the Prologue to the Canterbury Tales is here given as an illustration of the conclusions arrived at in Chap. IV., for the pronunciation of English in the xIV th century. But it has been necessary to abandon the intention there expressed, of following the Harl. MS. 7334 as closely as possible, for since the passage referred to was printed, the Chaucer Society has issued its magnificent Six-Text Edition of the Prologue and Knight's Tale, and it was therefore necessary to study those MSS. with a view to arriving at a satisfactory text to pronounce, that is, one which satisfied the laws of grammar and the laws of metre better than the reading of any one single MS. which we possess. For this purpose the systematic orthography proposed on p. 401, became of importance. The value of exact diplomatic reprints of the MSS. on which we rely, cannot be overrated. But when we possess these, and endeavour to divine an original text whence they may have all arisen, we ought not to attempt to do so by the patchwork process of fitting together words taken from different MSS., each retaining the peculiar and often provincial orthography of the originals. The result of such a process could not but be more unlike what Chaucer wrote than any systematic orthography. Chaucer no doubt did not spell uniformly: It is very difficult to do so, as I can attest, after making the following attempt, and probably not succeeding. But a modern should not venture to vary his orthography according to his own feelings at the moment, as they would be almost sure to lead him astray. Whenever, therefore, a text is made out of other texts some sort of systematic orthography is inevitable, and hence, notwithstanding the vehement denunciation of the editor of the Six-Text Edition, I have made trial of that one proposed on p. 401, in all its strictness. The result is on the whole, better than could have been expected. Notwithstanding the substantial agreement of the Harleian 7334, and the Six New Texts, there is just sufficient discrepancy to assist in removing almost every difficulty of language and metre, so far as the prologue is concerned, and to render conjecture almost unnecessary. The details are briefly given in the footnotes to the following composite text.

PRONUNCIATION OF LONG U AND OF AY, EY AS DEDUCED FROM A COMPARISON OF THE ORTHOGRAPHIES OF SEVEN MANUSCRIPTS OF THE CANTERBURY TALES.

The investigations in Chap. IV. for the determination of the pronunciation of the xiv th century, were avowedly founded upon the single MS. Harl. 7334 (suprà p. 244). Now that large portions of six other MSS. have been diplomatically printed, it is satisfactory to see that this determination is practically unaffected by the new orthographies introduced. The Cambridge and the Lansdowne MSS., indeed, present us at first sight with what appears to be great vagaries, but when we have once recognized these as being, not indeterminate spellings of southern sounds, but sufficiently determinate representations of provincial, northern, or west midland, utterances, mixed with some attempts to give southern pronunciation, they at once corroborate, instead of invalidating, the conclusions already obtained. That this is the proper view has been sufficiently shewn in the Temporary Preface to the Six-Text Edition, p. 51 and p. 62, and there is no need to discuss it further.

¹ Temporary Preface to the Six-Text Edition of Chaucer's Canterbury Tales, Part I., by F. J. Furnivall, pp. 113-115. A uniform system of spelling did not prevail in the xiv th century, and as we have seen, can scarcely be said to prevail in the xix th, but variations were not intentional, and the plan I advocate is, from the varied spellings which prevail, to discover the system aimed at, but missed, by the old writer, and adopt it. All varieties of grammar, dialect, and pronunciation, when belonging to the author, and not his scribe, who was often ignorant, and still oftener careless (p. 249), should be preserved, and autographs, such as Orrmin's and Dan Michel's, must be followed implicitly and literatim. In such diplomatic printing, I even object to insertions between brackets. They destroy the appearance of the original, and hence throw the investigator into

the editor's track, and often stand in the way of an independent conjecture. At the same time they do not present the text as the editor would shew it, for the attention is distracted by the brackets. The plan pursued for the Prisoner's Prayer, suprà pp. 434-437, of giving the original and amended texts in parallel columns, is the only one which fully answers both purposes. Where this is not possible, it it appears to me that the best course to pursue is to leave the text pure, and submit the correction in a note. This serves the purpose of the [] or sic, much more effectually than such dis-turbances of the text, which are only indispensable when notes are inconvenient. The division of words and capitals of the original should for the same reason be retained. See the Temp. Pref. p. 88.

These MSS. may be looked upon as authorities for the words, but not for the southern pronunciation of the words, and they shew their writers' own pronunciation by using letters in precisely the same sense as was assigned from the Harl. MS. on p. 398 above. Two points may be particularly noticed because they are both points of difference between Mr. Payne and myself, (suprà pp. 582, 583) and in one of them I seem to differ from many of those who have formed an opinion on the subject.

Long u after an examination of all the authorities I could find, was stated on p. 171 to have been (yy) during the xvi th century. There did not appear to be any ground for supposing it to be different in the xivth century, and hence it was assumed on p. 298 to have had that value at that time. This was strengthened by the proof that (uu), the only other sound which it could have represented, was written ou, p. 305. A further though a negative proof seems to be furnished by the fact that I have not observed any case of long u and ou rhyming together, or being substituted one for the other in the old or any one of the six newly published texts. I cannot pretend to have carefully examined them for that purpose, but it is not likely that in my frequent references to them for other purposes, such a marked peculiarity should have escaped me. It has however been already pointed out that in the first half of the xm th century (uu) was represented by u, and not by ou, and for about thirty years, including the end of the xm th and beginning of the xiv th century, both signs were employed indiscriminately for (uu), and that this use of ou seemed to have arisen from a growing use of u as (yy), pp. 424, 470, 471 note 2, etc.2 Hence the predominance of ou in the be-

Compare fortone, buke in Hampole (suprà p. 410, n. 2). The two orthographies boke, buke, struggle with each other in Hampole. In the Towneley Mysteries, I have also observed the rhyme, goode infude, which however, may be simply a bad rhyme, the spelling is Northern and of the latter part of the xv th century. On examining the Harl. MS. 2253 for the rhymes: bur mesaventur, bure coverture, quoted from the Cam. MS. of King Horn on p. 480, I find that the first rhyme disappears. Thus v. 325, Lumby's edition of the Cam. MSS. has

Went ut of my bur
Wip muchel mefaventur
and the Harl. reads fo. 85,
Went out of my boure,
fhame pe mott byfhoure;
and v. 649, the Cam. MS. has
heo ferde in to bure
to fen auenture,
and the Harl. has, fo. 87,
Horn ne pohte nout him on
ant to boure wes ygon.

Judging however by the collation in F. Michel's edn. the Oxf. MS. agrees with the Cam. The text is clearly doubtful.

But v. 691, which in the Cam. MS.

he lip in bure under couerture becomes in the Harl. fo. 87, he byht nou in boure,

where the scribe by adopting the orthography on has clearly committed himself to the pronunciation (uu) and not (yy). It would, however, not be safe to draw a general conclusion from these examples in evidently very untrustworthy texts, which have yet to be properly studied in connection with dialectic and individual pronunciation,

suprà p. 481.

On p. 301, note, col. 1, a few instances of the Devonshire substitutes for (uu) are given, on the authority of Mr. Shelly's pronunciation of Nathan Hogg's Letters. The new series of

ginning of the xiv th century and the subsequent strict severance of long u and ou, which seem so far as I have observed, to have been never confused, as short u and ou certainly were (p. 304). The conclusion seems to be inevitable, that long u and ou represented different sounds, and that the long u must have had in the xiv th, what Bullokar in the xvi th century called its "olde and continued" sound, namely (yy). This, however, is directly opposed to Mr. Payne's opinions given on p. 583.

those letters there named, having an improved orthography, using u, a, for (y, æ),—not (a), as there misprinted,—has allowed me to make some collections of words, which are curious in connection with the very ancient west-ern confusion of u, e, i, and the pro-nunciation of long u as (yy). It may be stated that the sound is not always exactly (yy). In various mouths, and even in the same mouth, it varies considerably, inclining towards (uu), through (uu?), or towards (se) the labi-alised (se). The short sound in did seemed truly (dsd). But in could, good, I heard very distinctly (kyd, gyd) with a clear, but extremely short (y), from South Devon peasants in the neighbourhood of Totnes. Nor is the use of (yy) or (uu, so) for (uu) due to any incapacity on the part of the speaker to say (uu). The same peasant who called *Combs*, (Kyymz) or (Ksymz), [it is difficult to say which, and apparently the sound was not determinate], and even echoed the name thus when put to him as (Kuumz), and called brook (bryk), with a very short (y), talked of (muur, stuunz, ruud) for more, stones, road. Mr. Murray, in his paper on the Scotch dialect in the Philological Transactions, has some interesting spe-Scotch, and on the transition of (u) or (u) through (e) into (c) and (c) (w) through (a) into (b) and finally (a).
On referring to pp. 160-3, supra, the close connection of (uu, yy) will be seen to be due to the fact that both are labial, and that in both the tongue is raised, the back for (uu) and front for (yy). The passage from (uu) to (yy) may therefore be made almost imperceptibly, and if the front is slightly lowered, the result becomes (20). The two sounds (yy, 20) are consequently greatly confused by speakers in Scotland, Norfolk, and Devonshire. Mr. Murray notes the resemblance between (2, 0),—which indeed led to the similarity of their notation in palaeotype—as shewn by Mr. M. Bell's assigning (a) and my giving (b) to the French mute s, which others again make (b). If then (u) travels through (y, s) to (a), its change to (x) is almost imperceptible, and the slightest labialisation of the latter sound gives (a). Whatever be the reason, there can be no doubt of the fact that (u, y, s, a, x, o) do interchange provincially sow, and hence we must not be surprised at finding that they did so in ancient times, when the circumstances were only more favourable to varieties of speech. These observations will serve in some degree to explain the phenomena alluded to in the text, and also the following lists from Nathan Hogg's second series, in which I retain the orthography of the author (Mr. H. Baird), where we should read u, a as (y, se) short or long, and other letters nearly as in glossotype.

u, a as (y, w) short or long, and other letters nearly as in glossotype.

EW and long U become (yy), as: blu, buty, cruel, curyiss ourious, cut, acuts, duce deuce, duty, hu hus yeu, humin human, kinklud conclude, muzic, nu new, pur pure, rain'd, stu stew, stupid, tru, truth, tun, vlut flute, vu view few, vum fume, vutur future, yuz'd used, zuant suant.

Long and short OO, OU, O, U, usually called (uu, u) become (yy, y) or (so, s), as: balu hullahbaloo, blum bloom, bruk brook, buk book, chuz choose, cruk crook, cud could, curt court, cus course coarse, dru through, drupin drooping, du do, gud good, gulden golden, intu, kushin cushion, luk look, lus'nd loosened, minuver manoeuvre, muv move, num noon, pul'd pulled, pruv prove, puk pook, rum room, shu shoe, shud should, skule school, stud stood, trupin trooping, tu too two to [emphatic, unemphatic ta = (to)], tuk took, tum tomb, u who, vul full fool, vut foot, yu you, zmuthe smooth, zun soon.

Short U, OO, O usually called (a) become (i), as: blid blood, dist do'st, honjist, unjust, jist just adv., rin run

The second point is extremely difficult, and cannot be so cursorily What was the sound attributed to ai ay, ei ey in Chaucer? The constant confusion of all four spellings shews that it was one and the same. Here again the voice of the xvi th century was all but unanimous for (ai), but there is one remarkable exception, Hart, who as early as 1551 (in his MS. cited below Chap. VIII, § 3, note 1), distinctly asserts the identity of the sounds of these combinations with that of e, ea, that is (ee). For printing this assertion in 1569 he was strictly called to order by Gill in 1621, suprà p. 122. All the other writers of the xvi th century, especially Salesbury and Smith distinctly assert that (ai) was the sound. Hence on p. 263, (ai) was taken without hesitation to be the sound of ay, ey, in Chaucer. We are familiar with the change of (ai) into (ee), p. 238, and with the change of (ii) into (ei, ai), p. 295, but the change of (ee) into (ai), although possible, and in actual living English progress (p. 454, n. 1), is not usual. There was no reason at all to suppose that ay could have been (ii), and little reason to suppose that it would have been (ee) before it became (ai). On examining the origin of ay, ey, in English words derived from ags. sources, the y or i appears as the relic of a former g = (gh, gh, J) and then (i), which leads irrresistibly to the notion of the diphthong (ai), p. 440, l. 14, p. 489. But it certainly does not always so arise, and we have seen in Orrmin (ib.) that the gg = (1) was sometimes as pure an insertion as we occasionally find in romance words derived from the Latin, and as we now find

[also to urn], rish'd rushed, tich'd touched, vlid food, wid'n would not, winder wonder, wisser worser, zich such, zin sun son, zmitch smutch.

Short E, I, usually called (e, i) are frequently replaced by (e) or (x), as: beval befell, bul bell, bulch'd belched, burry'd buried, churish cherish, eszul himself, etazul itself, mezul myself, mulkin milking, muller miller, purish perish, shullins shillings, spul spell, spurit spirit [common even in London, and compare syrop, stirrup], tullee tell you, turrabul terrible, ulbaw'd elbowed, vuller fellow [no r pronounced final or pre-consonantal trilled (r) seems unknown in Devonshire], vullidge village, vulty filthy, vurrit ferret, vury very, vust first, wul well, wulvare welfare, yul yell, yur'd heard, zinul smell, zulf self.

The words zup'd swept, indust indeed,

The words zup'd swept, indud indeed, dad did done, humman hummen woman women, do not exactly belong to any of these categories.

The above lists, which, being only derived from one small book, are necessarily very incomplete, serve to shew the importance of modern dialectic study in the appreciation of ancient and therefore dialectic English (p. 581).

1 Not in Scotch, where the spellings ai, ei seem to have been developed independently in the xvth century, for the Scotch long a, e, and perhaps meant (as, cs), compare Sir T. Smith, suprà p. 121, l. 18. These spellings were accompanied by the similar forms oi, ui, omi for the long o, u, ou, perhape = (os, ys, us), though the first was not much used. We must recollect that in Scotch short i was not (i) or (i), but (e), and hence might casily be used for (s) or (e) into which unaccented (e) readily degenerates. For this information I am indebted to Mr. Murray's paper on Scotch (referred to in the last note), which was kindly shewn to me in the MS. The notes there furnished on the development of Scotch orthography are highly interesting, and tend to establish an intentional phonetic reformation at this early period, removing Scotch spelling from the historical affiliation which marks the English.

² "In Italian, Spanish, Portuguese, and Provençal, Latin A remains unaltered. Some deviations into ai or emust be admitted... The most important and frequent case is when a by

in English after the sound of (e) in what many persons recognize as the "standard" pronunciation of our language, for instance (neeim) for name. There are a few straggling instances in even xiii th century MSS. where ay appears to rhyme to e, the chief of which turn on apparently a dialectic pronunciation of saide as sede, which is also an orthography occasionally employed (p. 484, l. 15, p. 481, l. 33). Dr. Gill, 1621 (Logonomia p. 17), cites (sed) as a northern pronunciation for (said), and classes it with (saa) for (sai). Mr. Payne has pointed out similar cases in the Owl and Nightingale, v. 349, 707, 835, 1779. The orthography sede occurs also, v. 472, 548, 1293, and probably elsewhere. Mr. Payne also notes the less usual rhymes: bigrede upbreide 1411, misrede maide 1061, grede maide These rhymes are certainly faulty, because in each case the ags. has a g in the second word but not in the first, and we cannot suppose them to have rhymed at this early period.2 In Floris and

the action of an inserted coalescing i or e, according to the individual tendency of the language, passes into ai, or ei, or e and ie: prov. air, sp. aire from aer: prov. primairan (otherwise only primer primier), port. primeiro, span. primero, it. primiero, from primarius; prov. esclairar from esclariar which also exists; prov. bais, port. beijo. span. beso from basium; prov. fait, port. feito, span. hecho from factus c being palatalised into i. . . This vowel has suffered most in French, where its pure sound is often obscured into ai, e and ie. We must first put aside the common romance process, just noticed, by which this obscuration is effected by an inserted i as in air, premier, baiser, fait." Translated from Diez, Gr. der rom. Spr. 2nd. ed. i. 135. ¹ The Jesus Coll. Oxf. MS. reads

seyde in each case. ² The orthography and rhymes of the Owl and Nightingale as exhibited in the Cott. MS. Calig. A. 1x., followed by Wright, in his edition for the Percy Society, 1843, are by no means immaculate. The MS. is certainly of the xIII th century, before the introduction of on for (uu), that is, before 1280 or probably before the death of Henry III., 1272, (so that, as has been conjectured on other grounds, Henry II. was the king whose death is alluded to in the poem), and is contained in the same volume with the elder text of Lazamon, though it is apparently not by the same scribe. Nor should I be inclined to think that the scribe was a Dorsetshire man, although the poem is usually ascribed to Nicholas de Guildford, of Portisham, Dorsetshire.

The confusions of e i, o e, e a, recall the later scribe of Havelok. Dreim 21, cleine 301, are obvious scribal errors, corrected to drem clene in the Oxf. MS., and: crei 334, in Oxf. MS. crey, although put in to rhyme with dai, must be an error for cri. We have cases of omitted letters in : rise wse 53, wrste toberste 121, wlite wto 439, for wise, verste (?), wite. There are many suspicious rhymes, and the following are chiefly assonances: worse mershe 303, heisugge stubbe 505, worde forworthe 547, igremet of-chamed 931, wise ire 1027, oreve idorve 1151, flesche cwesse 1385, fliste vicst 405, and, in addition to the ci, c rhymes cited in the text, we have: forbreideth nawedeth 1381, in Oxf. MS. ne awedep. As to the present pronunciation of ay, ey in Dorsetshire, the presumed home of the poet, Mr. Barnes gives us very precise information: "The diphthongs as or ay, and ei or ey, the third close long sound [that is, which usually have the the sound of a in mate], as in May, hay, maid, paid, rein, neighbour, prey, are sounded—like the Greek a, -the a or e, the first open sound, as a in father, and the i or y as ce, the first close sound. The author has marked th a of diphthongs so sounded with a circumflex: as mây, hây, mâid, pâid, vâin, nâighbour, prây." Poems of Rural Life, 2nd ed., p. 27.—That is, in Dorsetshire the sound (ai), which we have recognized as ancient, is still prevalent. This is a remarkable comment upon the false rhymes of the MSS. Stratmann's edition, 1868, is of no use for the present investigation, on account of its critical orthography.

Blancheflur, Lumby's ed. occurs the rhyme: muchelhede maide 51. which is similarly faulty. See also p. 473 and notes there. have likewise seen in some faulty west midland MSS. belonging to the latter part of the xv th century, (suprà p. 450, n. 2), that ey was regarded as equivalent to e. In the Towneley Mysteries we also find ay, ey, tending to rhyme either with a or e. In fact we have a right to suppose that in the xv th century, at least, the pronunciation of ey, ay as (ee) was gaining ground, for we could not otherwise account for the MSS, mentioned, for the adoption of the spelling in Scotch in 1500, p. 410, n. 3, and for the fact that Hart, -who from various other circumstances appears to have been a West Midland man—seemed to know absolutely no other pronunciation of ay than (ee) in 1551.2 We have thus direct evidence of the coexistence of (ee, ai) in the xvi th century, each perhaps limited in area, just as we have direct evidence of the present coexistence of both sounds in high German (p. 238), and Dyak (p. 474, note, col. 2). Such changes do not generally affect a whole body of words suddenly. They begin with a few of them, concerning which a difference prevails for a very long while, then the area is extended, till perhaps the new sounds prevail. We have an instance of this in the present coexistence of the two sounds (a, u) for short u, p. 175 and notes. It is possible that although Gill in 1621 was highly annoyed at maids being called (meedz) in place of (maidz) by gentlewomen of his day (suprà, p. 91, l. 8), this very pronunciation might have been the remnant of an old tradition, preserved by the three rhymes just cited from the xIII th century to the present day, although this hypothesis is not so probable as that of scribal error. And if it were correct, it would by no means

¹ On consulting the Auchinleck MS. text of Floris et Blancheflur, the difficulty vanishes. Lumby's edition of the Cam. MS. reads, v. 49:

pu art hire ilich of alle pinge, Both of femblaunt and of murninge, Of fairnesse and of muchelhede,

Bute bu ert a man and heo a maide; where the both of the second line makes the third line altogether suspiciously like an insertion. The Auchinleck MS., according to the transcription kindly furnished me by Mr. Halkett, the librarian of the Advocates Library, Edinburgh, reads, v. 53:

pou art ilich here of alle pinge Of semblant and of mourning But pou art a man and he is a maide pous pe wif to Florice faide. Another bad rhyme in the Cam. MS. is v. 533.

Hele ihc wulle and no ping wreie Ower beire cumpaignie which in the Abboteford Club edition of the text in the Auch. MS. runs thus, v. 518:

To the king that the hem nowt biwreie

Where thourgh thai were fiker to dethe.

The editor suggests biwreipe, which would not be a rhyme. The real reading is manifestly to deye, arising, as Mr. Murray suggests, from the common MS. confusion of y, b. Admiral is both in the Auch. and Cott. MSS. constantly spelled -ayl, and hence we must not be offended with the rhyme, Admiral confail 799, for there was evidently an uncertain pronunciation of this strange word.

² This day (9 July, 1869) a workman, who spoke excellent English to me, called *specially* (spii·sul·). Had he any idea that others said (spes·ul·)? The facts in the text are perhaps partly accounted for by the influence of the Scotch orthography and pronunciation,

referred to on p. 637, n. 1.

prove that the general pronunciation of ay in all words from ags. was not distinctly (ai) and that the (ee) pronunciation was not extremely rare.

In a former investigation it was attempted to shew that Norman French ei, ai, had at least frequently the same sound (ai), supra pp. 453-459. Mr. Payne on the contrary believes that the sound was always pure (ee), and that the Norman words were taken into English, spellings and all, retaining their old sounds. He then seems to conclude that all the English ay, ey, were also pronounced with pure (ee), and maintains that this view agrees with all the observed facts of the case (p. 582). Prof. Rapp also, as we shall see, lays down that Early English Orthography was Norman, and as he only recognizes (ee) or (EE) as the sound of Norman as, of course he agrees practically with Mr. Payne. Modern habits have induced perhaps most readers to take the same view, which nothing but the positive evidence of the practice of the xvi th century could easily shake.1 But it would seem strange if various scribes, writing by ear, and having the signs e, ee, ea, ie, at hand to express the sound (ee), should persist in a certain number of words, in always using ey, ay, but never one of the four former signs, although the sounds were identical. This is quite opposed to all we know of cacographists of all ages, and seems to be only explicable on the theory of a real difference of sound, more marked than that of (EE, ee). Nay, more, some occasional blunders of o for ey, etc., would not render this less strange to any one who knows by painful experience (and what author does not know it?) that he does not invariably write the letters he intends, and does not invariably see his error or his printer's or transcriber's errors when he revises the work. mistake of e for ey we might expect to be more frequent than that of ay for s. When the writer is not a cacographist, or common scribe, but a careful theoretical orthographer as Orrmin or Dan Michel, the absolute separation of the spellings e, ey becomes evidence. We cannot suppose that Dutchmen when they adopted pais called it anything but (pais), why then should we suppose Dan Michel, who constantly employs the spelling pais,2 pronounced

¹ I was glad to learn lately from so distinguished an English scholar as Prof. H. Morley that he was always of opinion that ay, ey, were (ai) and not (ee).

(ee).

Mr. Morris's index to Dan Michel's
Ayenbite refers to p. 261, as containing pese for peace. I looked through
that page without discovering any instances of pese, but I found in it 11 instances of pais, pays and 3 of paysible.
Thinking Dan Michel's usages important, I have extracted those words given
in the index, which of course does not
refer to the commonest ags, words of
constant occurrence. This is the list,
the completeness of which is not guaranteed, though probable: adreynt,

otherwise? And when we see some French words in Chaucer always or generally spelled with e which had an ai in French, as: resoun 276, sesoun 348, pees 2929, plesant 138, ese 223, 2672, why should we not suppose that in these words the (ee) sound was general, but that in others, at least in England, the (ai) sound prevailed? Nay more, when we find ese occasionally written eyes for the rhyme in Chaucer (suprà p. 250 and note 1, and p. 265), as it is in Dan Michel's prose, why should we not suppose that two sounds were prevalent, just as our own (niidh:1, neidh:1) for neither, and that the poet took the sound which best suited him? appears to me to be the theory which best represents all the facts of the case. It is also the theory which best accords with the existing diversities of pronunciation within very narrow limits in the English provinces. It remains to be seen how it is borne out by the orthography of the Ha. Harleian 7334, and the six newly published MS. texts, E. Ellesmere, He. Hengwrt, Ca. Cambridge, Co. Corpus, P. Petworth, and L. Lansdowne of the Canterbury Tales. For this purpose I have looked over the prologue and Knightes Tale, and examined a large number, probably the great majority of the cases, with the following results. The initial italic words, by which the lists are arranged, are in modern spelling, and where they are Where no initials are put, all the absent the words are obsolete. MSS. unnamed agree in the preceding spelling so far as having one of the combinations ai, ay, oi, oy is concerned, small deviations in other respects are not noted, but if any other letter is used for one of the above four it is named. The numbers refer to the lines of the Six Text edition, and they have frequently to be increased by 2 for Wright's edition of the Harleian MS.

The general unanimity of these seven MSS. is certainly remarkable. It seems almost enough to lead the reader to suppose that when he finds the usual ay, sy replaced by a, s, i in any other MSS., the scribe has accidentally omitted one of the letters of the diphthong, which being supplied converts a, s, i into ay, sy, ai or si respectively. Thus when in v. 1530 all but L. use sy or ay, and in v. 1575 all, including L., use sy in sodsynly, sodsynlichs, we cannot but conclude that sodanly in L. 1530, is a clerical error for sodaynly. We have certainly no right to conclude that the a was designed to indicate a peculiar pronunciation of a as ay or conversely. But it will be best to consider the variants scriatim as they are not many in number.

CONSIDERATION OF VARIANTS IN THE LAST LIST.

Anglosaxon and Scandinavian Words.

Against 1787 has still two sounds (sgeenst, sgenst) which seem to correspond to two such original sounds as (again agen).

Ashes, aisshes Co. 2957 represented really a duplicate form, as appears from its having been preserved into the xvi th century, p. 120, l. 6.

Die 1109, see variants on p. 284. Dry 420, see variants on p. 285.

Dyer, the general orthography dyer 362 is curious, for the ags. deagan would naturally give deyer, which however is only preserved in Ha, the rest giving dyere, and the Promptorium

ever is only preserved in Ha, the rest giving dyere, and the Promptorium having dyyn; Ha. has deye in 11037. It would almost seem as if habit had confused the two words dye, die, and hence given the first the same double sound as the second. There is no room for supposing the sound (dee) in either case.

Eye 10, see variants on p. 285.

Flesh, 147 is one of the words mentioned on p. 265, as having two spellings in Ha. see also p. 473 note 1, for a possible origin of the double pronunciation.

Height, height P. 1890 is of course a clerical error for heighte.

Neighbour 535, follows nigh in its

Nigh 732, 535. The variants here seem to shew that this word should be added to the list given on pp. 284-6, as having a double pronunciation, especially as we have seen that the (ii) acound is preserved in Devon, p. 291, as it is in Lonsdale.

Seen. The orthography seyn 2840 for seen is supported by too many MSS. to be an error, it must be a du-

plicate form, retaining in the infinitive the expression of the lost guttural, which crops up so often in different parts of this verb, Gothic saihwan, compare the forms on p. 279.

Slay 992, see p. 265; the double sound (ee, ai) may have arisen from the double ags. form, without and with the guttural, the latter being represented by (ai) and the former by (ee), which is more common.

Spreind, isprend, isprind 2169 must be merely clerical errors for ispreined, as in most MSS., because both words rhyme with ymeynd, which retains its orthography in each case.

orthography in each case.

Whether, 1857, has certainly no more title to (ai) than beat or them, but nevertheless we have seen Orrmin introduce the (i) or (s) into these words, p. 489, hence it is not impossible that there may have been some provincials who said wheider, but still it is more probable that the ei of E. and He. in 1857 are clerical errors. The word is not common and I have not noted another example of it in E. He.

FRENCH WORDS.

Barren, baran L. 1977, must be a clerical error for barayn.

Braid 1049, seems to have had various sounds, corresponding to the ags. bregdan, icel. bregda, and to the French broder, which would give the forms breyde, browde. while broyde would seem to be an uncertain, or mistaken mixture of the two (braid'e, bruud'e, brûid'e). We do not find brede (breed'e). but as the g was sometimes omitted even in ags. it would have been less curious than brayde.

Caitiff. The orthography catiff P. 1552, 1717, 1946, being repeated in

three places although opposed to the other six MSS. which determine caytif to be the usual form, may imply a different pronunciation rather than be a clerical error. The French forms of this derivative of the Latin captivus, as given by Roquefort are very numerous, but all of them contain i, or an ederived from ai, thus: caitif, caiptif, caitien, caitis, caitin, caitif, caitif, cetis, chaitien, chaitif, chetif, chetif, chetif, chaitif, chetif, chetif, chetif, chaitif, cultificely definition of the caition. The Spanish cautivo has introduced the labial instead of the palatal modification, while the Italian only has preserved the a pure by assimilating p, thus, cattivo. If then the a in P. was intentional, it was very peculiar.

Chieftain, cheveten Ha. 2565, should according to the general analogy of such terminations be cheveteyn, and it will then agree with the other MSS.

Company. In compaignye 331, 2105, 2411, the i is conceived by M. Francisque Michel to have been merely orthographical in French, introduced to make gn mouillé, just as i was introduced before il to make it mouillé. Compare also p. 309, n. 1, at end. It is very possible that both pronunciations prevailed (kumpainsi e, kumpansi e) and that the first was considered as French, the latter as English. There is no room for supposing such a pronunciation as (kumpeensi e) with (ee).

Conveyed. Convoyed E. 2737 is not a variant of the usual conveyed, but another word altogether, a correction of the scribes.

Counsel, counsel L. 3096, is probably a clerical error for counseil as in the other MSS.

Courtesy. Curteisye 46, vileynye 70, may be considered together. They were common words, and the second syllable was usually unaccented, whereas in curteis, vileyn, it was frequently accented. Hence we cannot be surprised at finding ey strictly preserved in the latter, but occasional deviations into non-diphthongal sounds occurring in the former. Careful scribes or speakers seem, however, to have preserved the ey of the primitive in the derivative. The vilonye of Ha. Co. P. 70, which is replaced by vilanye in Ha.

740, serves to corroborate this view, as evidently the scribe did not know how to write the indistinct sound he heard, a difficulty well known to all who have attempted to write down living sounds. See also Mr. Payne's remarks, supra p. 585. To the same category belong the variants of portraiture, purveyance, verily.

Dais, dese L. for deys = dais 370, in opposition to the six other MS. is probably a clerical error for deyse the final e being added also to the rhyming word burgeise in L. which retains the i.

Dice. Deys Ca. 1238 for dys is clearly an error as shewn by the rhyming word pardys, but dys itself seems to have been accommodated to the rhyme for dees, which occurs in Ha. 13882, and is the natural representative of the French des.

Finest. The orthography foynest Ca. 194, must be a clerical error.

Florin. The floren, florin, floreyn 2088 may be concurrent forms of a strange word, and the last seems more likely to have been erroneous.

Fresh 92, had no doubt regularly (ee), but the older (ai) seems to have been usual to some, the fresshe of Ca. is a provincialism of the order noted

on p. 476

Kerchiefs. Couercheis Ca. 453, is probably a mere clerical error for couerchefs, i having been written for f, as we can hardly suppose the provincial scribe of Ca., to have selected a

Norman form by design.

Maintain. Maynteyne 1778, susteyne 1993, belong to the series of words derived from tenere. There is no disagreement respecting the ay in the first syllable of maynteyne; susteme is fully supported by the rhyme, p. 265, 1. 1, and hence mayntene, sustens are probably the proper forms. I have unfortunately no note of the Chancerian forms of obtain, detain, retain, contain, appertain, entertain, abstain, but probably -tene would be found the right form. The spelling ey and pronunciation (ai) may have crept in through a confusion with the form -teyne = Lat. -tingere, of which I have also accidentally been guilty p. 265, 1. 25, as: atteyne, bareyne, must rhyme, 1243, 8323, and as -stringere produces -streyne 1455, 1816 in all MSS.

Master, mystir Ca. 261 for master is probably a clerical error.

ing, which see.

Pertracture 1968, portrayer 1899; the variants may be explained as in Courtesy, which see.

Portraying. In portreying, portreying 1938 there is an omission of one y on account of the inconvenience of the yy in the first form, overcome by changing the first y into i in P.

Purveyance 1165, the variants may be explained as in Courtesy, which see.

Straight. Stryt Ca. 1984, must be a clerical error for streyt, as the absence of e is quite unaccountable.

sence of s is quite unaccountable.

Suddenly. Sodanly L. 1530 must, as
we have seen p. 643, be an error for
sedsinly.

The natural effect of this examination has been to place the variants rather than the constants strongly before the reader's mind. He must therefore recollect that out of the total of 111 words the following 73, many of which occur very frequently, are invariably spelt with one of the phonetically identical forms ai, ay, oi, oy, in each of the seven MSS. every time they occur:—

Verily 1174, the variants may be

On the other hand, the variants only affect 38 words, of which few, except those already recognized to have two forms in use, occur more than once, while the variants confined to one or two MSS. display no manner of rule or order, and are far from shewing a decided θ form as the substitute for ay, θy . They may be classified as follows:

15 CLERICAL ERRORS: height heght, spreyned sprend sprined, whether wheither,—berren baran, chieftain, chevetan, counsel counsel, dice deys, finest feynest, kerchiefs couercheis, maintain maynteyne mayntene, master mystir, straight stryt, suddenly sodanly, sustain susteyne, turneignge turnyinge tornynge.

BLES: courtesy courteisie curtesie, portraiture portreiture pourtrature, portrayer portreyor purtreoure, purveyance purveiance purueance puruyance, verily verraily verrely verrily, villany vileynye velany vilonye.

5 MISCELLANEOUS: caitiff may have been occasionally catiff as well as caytif—convoyed was a different reading, not an error for conveyed—foring being a foreign coin may have been occasionally mispronounced foreyn,—portreing was an orthographical abbreviation of portreiynge—wasseyllage was a manifest error for the unusual vasselage, the usual wasseyl occurring to the scribe.

The variants, therefore, furnish almost as convincing a proof as the constants, that ay, sy represented some sound distinct from s

(ee). But if there was a distinct sound attachable to these combinations ay, sy, in Chaucer's time, what could it have possibly been but that (ai) sound, which as we know by direct evidence, subsisted in the pronunciation of learned men and courtiers (Sir T. Smith was secretary of state) during the xvi th century, and which the spelling used, and no other, was calculated to express, and was apparently gradually introduced to express. The inference is therefore, that Chaucer's scribes pronounced ay, sy as (ai) and not as (ee), and where they wished to signify the sound of (ee), in certain well-known and common Norman words, they rejected the Norman orthography and introduced the truly English spelling s. The inference again from this result is that there was a traditional English pronunciation of Norman as, si, as (ai), which may have lasted long after the custom had died out in Normandy, on the principle already adduced (p. 20), that emigrants preserve an older pronunciation.

TREATMENT OF FINAL E IN THE CRITICAL TEXT.

As the following text of the Prologue is intended solely for the use of students, it has been accommodated to their wants in various First the question of final e demanded strict investigation. The helplessness of scribes during the period that it was dying out of use in the South, and had already died out in the North, makes the new MSS. of little value for its determination, the Cambridge and Lansdowne being evidently written by Northern scribes to whom a final e had become little more than a picturesque addition. It was necessary therefore to examine every word in connection with its etymology, constructional use, and metrical value. every case where theory would require the use of a final e, or other elided letter, but the metre requires its elision, it has been replaced by an apostrophe. The results on p. 341 were deduced from the text adopted before it had heen revised by help of the Six-Text Edition, and therefore the numbers there given will be slightly erroneous1, but the reader will by this means understand at a glance the bearing of the rules on p. 342.

The treatment of the verbal termination -ede, required particular attention. There are many cases in which, coming before a consonant, it might be -ed' or -'de, and it was natural to think that the latter should be chosen, because in the contracted forms of two syllables, we practically find this form; thus: fedde 146, bledde 145, wente 255, wiste 280, spente 300, coude 326, 346, 383, kepte 442, dide 451, couthe 467, tawghte 497, cawghte 498, kepte 512, wolde 536, mighte 585, scholde 648, seyde 695, moste 712 and

1 The number of clisions of essential e, stated at 13 on p. 341, has been reduced. The only important one left is meer' 541, and that is doubtful on account of the double form of the rhyming word milleer. see p. 389. The number of plural -es treated as -s has been somewhat increased. The fol-

lowing are examples: palmer's 13, servawnt's 101, fether's 107, finger's 129, hunter's 178, grayhound's 190, sleev's 193, tavern's 240, haven's 407, housbond's 460, aventur's 795. Of course (') is not used as the mark of the genitive cases, but only to shew a real elision.

many others. But even here it is occasionally elided. Mr. Morris observes that in the Cambridge MS. of Boethius, and in the elder Wycliffite Version (see below § 3), the -ede is very regularly written. This however does not prove that the final e was pronounced, because the orthography hire, here, oure, youre, is uniform, and the elision of the final -e almost as uniform. The final e in -ede might therefore have been written, and never or rarely pronounced. It is certain that the first s is sometimes elided, when the second also vanishes, as before a vowel or h in: lov'd' 206, 533, gam'd' 534, etc. But it is also certain that -ed' was pronounced in many cases without the e, suprà p. 355, art. 53, Ex. Throughout the prologue I have not found one instance in which -ede, or -'de, was necessary to the metre, but there are several in which -ed', before a vowel, is necessary. If we add to this, that in point of fact -ed' remained in the xvi th century, and has scarcely yet died out of our biblical pronunciation, the presumption in favour of -ed' is very strong.² On adopting this orthography, I have not found a single case in the prologue where it failed, but possibly such cases occur elsewhere, and if so, they must be compared to the rare use of hadde, and still rarer use of were, here for the ordinary hadd', wer', her'.

The infinitive -e is perhaps occasionally lost. It is only saved by a trisyllabic measure in: yeve penawnce 223. If it is not elided in help' 259, then we must read whelpe 258, with most MSS. but unhistorically. On the other hand the subjunctive -e remains

as: ruste 500, take 503, were 582, spede 769, quyte 770.

Medial elisions must have been common, and are fully borne out by the Cuckoo Song, p. 423. Such elisions are: ev'ry 15, 327, ev'ne 83, ov'ral 249, ov'rest 290, rem'nawnt 724, and: mon'th 92, tak'th 789, com'th 839. The terminations -er, -el, -en, when run on to the following vowel, should also probably be treated as elisions. As respects -er, -re, I have sometimes hesitated whether to consider the termination as French -re, or as assimilated into English, under the form -er, but I believe the last is the right view, and in that case such elisions as: ord'r he 214, are precisely similar to: ev'ry 15, and occasion no difficulty. Similarly, -el, -le, are both found in MSS., but I have adopted -el, as more consonant with the treatment of strictly English words, and regarded the cases in which the l is run on to the following word, as elisions, thus: simp'l and Such elisions are common in modern English, and in the case of -le, they form the rule when syllables are added, suprà p. 52. In: to fest'n' his hood 195, we have an elision of e in en, and a final e elided, the full gerundial form being to festene, as it would be written in prose.

¹ The plural weygheden 454, is not in point.

Mr. Murray observes that lovde would be an older form than loved for lovede, and grounds his observation on the fact of the similar suppression of the y before l in tabyll, sadyll, fadyr, modyr, in the old Scotch plurals

tablys, sadlys, fadrys, modrys, but its subsequent restoration, accompanied by a suppression of the y before the s, in the more recent forms tabylls sadylls, fadyrs, modyrs. These analogies are valuable. All that is implied in the text is that the form -ed seems to have prevailed in Chancer.

As the text now stands there is no instance of an open e, that is, of final e preserved before a vowel (suprà p. 341, l. 2. p. 363, art. 82, and infrà note on v. 429), but there is one instance of final e preserved before he, (infrà note on v. 386).

METRICAL PECULIARITIES OF CHAUCER.

The second point to which particular attention is paid in this text is the metre. Pains have been taken to choose such a text as would preserve the rhythm without violating the laws of final s, and without having recourse to modern conjecture. For this purpose a considerable number of trisyllabic measures (supra p. 334) have been admitted, and their occurrence is pointed out by the sign iii in the margin. The 69 examples noted may be classified thus:

It would have been easy in many cases by elisions or slight changes to have avoided these trisyllabic measures, but after considering each case carefully, and comparing the different manuscripts, there did not appear to be any sufficient ground for so doing.

Allied to trisyllabic measures are the lines containing a superfluous unaccented syllable at the end, but to this point, which was a matter of importance in old Italian and Spanish versification, and has become a matter of stringent rule in classical French poetry, no attention seems to have been paid by older writers, whether French or English, and Chaucer is in this respect as free as Shakspere.

There are a few cases of two superfluous unaccented syllables, comparable to the Italian versi sdruccioli, and these have been indicated by (+) in the margin. There are only 6 instances: berye merye 207, 208, apotecaryes letuaryes 425, 426, miscarye mercenarye 513, 514, all of which belong to the class i-, so that the two syllables practically strike the ear as one.

But there are also real Alexandrines, or lines of six measures, which do not appear to have been previously noticed, and which I have been very loth to admit. These are marked vi in the margin.

There are four instances. In:

But sore wepte sche if oon of hem wer' deed. 148

the perfect unanimity of the MSS., and the harsh and unusual elision of the adverbial -s in sors, and the not common elision of the imperfect s in wepts, which would be necessary to reduce the line to one of five measures, render the acceptance of an Alexandrine imperative, and certainly it is effective in expressing the feeling of the Prioresse. In:

Men mote yeve silver to the pore freres. 232

the Alexandrine is not pure because the casura does not fall after the third measure. But the MSS, are unanimous, the elisions mot yev' undesirable, and the lengthening out of the line with the tag of "the pore freres," seems to indicate the very whine of the begging friar. In

With a thredbare cop', as a pore scoleer. 260

the pore which lengthens the line out in all MSS., seems introduced for a similar purpose. The last instance

Ine sawgh not this yeer so mery a companye. 764

is conjectural, since no MS. gives the reading complete, but: I ne sawgh, or: I sawgh not, are both unmetrical, and by using both we obtain a passable Alexandrine, which may be taken for what it is worth, because no MS. reading can be accepted.

The defective first measures to which attention was directed by Mr. Skeat, suprà p. 333, have been noted by (—), and a careful consideration of the MSS. induces me to accept 13 instances, 1, 76, 131, 170, 247, 271, 294, 371, 391, 417, 429, 733, 778, though they are not all satisfactory, as several of them (131, 247, 271, 391, 778) offend against the principle of having a strong accent on the first syllable, and two (417, 429) throw the emphasis in rather an unusual manner, as: weel coud' he, weel knew he, where: weel coud' he, well knew he, would have rather been expected, but there is no MS. authority for improving them.

Three instances have been noted of saynt forming a dissyllable, as already suggested, (suprà pp. 264, 476), one of which (697), might be escaped by assuming a bad instance of a defective first measure, but the other two (120, 509,) seem clearly indicated by MS. authority. See the notes on these passages. They are indicated by at in the margin.

CHAUCER'S TREATMENT OF FRENCH WORDS.

The third point to which attention is directed in printing the text of the prologue, is linguistic rather than phonetic, but seemed of sufficient interest to introduce in a work intended for the use of the Chaucer Society, namely, the amount of French which Chaucer admitted into his English. "Thank God! I may now, if I like, turn Protestant!" exclaims Moore's Irish Gentleman on the evening of 16th April, 1829, when the news of the royal assent to the Catholic Relief Bill reached Dublin.1 And in the same way it would appear that the removal of the blockade on the English language, when after "be furste moreyn," 1348, "John Cornwal, a maystere of grammere, chaungede be lore in gramere scole,"2 and Edward III. enacted in the 36th year of his reign, 1362-3, that all pleas should be pleaded and judged in the English tongue, the jealous exclusion of French terms from English works, which marks the former period, seemed to cease, and English having become the victor did not disdain to make free use of the more "gentle" tongue, in which so many treasures of literature were locked up. Even our older poems are more or less translations from the French, though couched in unmistakable English. But in the xrvth century we have Gower writing long poems in both languages, and Chaucer familiar with both, and often seeking his originals in The people for whom he principally wrote must have been also more or less familiar with the tongue of the nobles, and large numbers of French words must have passed into common use among Englishmen, before they could have assumed English inflectional terminations. We have numerous instances of this in Whenever a French verb was employed, the French termination was rejected, and an English inflectional system substituted. Thus using italics for the French part, we have in the prologue: perced 2, engend'red 4, 421, inspired 6, esed 29, honour'd 50, embrouded 89, harneysed 114, entuned 123, peyned 139, rosted 147. ypinched 151, gawded 159, crouned 161, purfyled 193, farsed 233, accorded 244, enryned 342, chaunged 348, passed 464, encombred 508, spyced 526, ypunish'd 657, trussed 681, feyned 705, assembled 717, served 749, grawnted 810, pray'den 811, reuled 816, studieth 841.—flouting' 91, harping' 266, offring' 450, 489, assoyling 661, —cry' 636, rost', broyll', frye 383, rehers' 732, feyne 736. Again we have an English adjective or adverbial termination affixed to French words, as: specially 15, fetisly 124, 273, certainly 235, solemnely 274, staatly 281, estaatlich 140, verrayly 338, really

In: daggeer 113, 392, we have a substantive with an English termination to a French root. Footmantel 472, is compounded of an English and French word. In: daliawnce 211, loodmannage 403, deverye 577, French terminations only are assumed. A language must have long been in familiar use to admit of such treatment as this. What then more likely than the introduction of complete words, which did not require to have their terminations changed? The modern cookery book and fashion magazines are full of French words introduced bodily for a similar Of course the subject matter and the audience greatly influence the choice of words, and we find Chaucer sensibly changing his manner with his matter—see the quantity of unmixed English in the characters of the Yeman, the Ploughman, and the Miller. To make this admixture of French and English evident to the eye. all words or parts of words which may be fairly attributed to French influence, including proper names, have been italicised, but some older Latin words of ecclesiastical origin and older Norman words have not been marked and purely Latin words have been put in small capitals. The result could then be subjected to a numerical test, and comes out as follows:

325, per cent. Lines containing no French word . . 37.9 only one 343, 40.0 ,, 157, two French words 18.2 ,, ,, three " 87, 3.4 ,, ,, " 12, four 0.4 ,, " ,, five 2 1, 0.1 Lines in the Prologue 858 100.0

If the total number of French words in the prologue be reckoned from the above data, they will be found to be 761, or not quite one word in a line on an average. The overpoweringly English character of the work could not be more clearly demonstrated.

Chaucer's language may then be described as a degraded Anglo-Saxon, into which French words had been interwoven, without interfering with such grammatical forms as had been left, to the extent of about 20 per cent., and containing occasionally complete French phrases, of which, however, none occur in the prologue. To understand the formation of such a dead dialect, we have only to watch the formation of a similarly-constructed living dialect. Such a one really exists, although it must rapidly die out, as there are not only not the same causes at work which made the language of Chaucer develop into the language of England, but there are other and directly contrary influences which must rapidly lead to the extinction of its modern analogue.

¹ These are very few in number, see 5, 162, 254, 336, 429, 430, 646, 662.

Here they kept up their language, and established schools, which are now almost entirely extinct. Surrounded by English of the xviith century they naturally grafted some of its words on their own, either as distinct phrases, or as the roots of inflections; and, perhaps, in more recent times, when fully nine-tenths of the present generation are educated in English, the amount of introduced English has increased.² The result is a living dialect which may be described as a degraded High German, into which English

This does not mean that it is a degraded form of the present literary high German, but merely of the high German group of Germanic dialects. On 19 Aug. 1869, the 14th meeting of the German Press Union, of Pennsylvania, U.S., was held at Bethlehem, when an interesting discussion took place on Penusylvania German, or das Deutsch-Pennsylvanische, as it is termed in the Reading Adler of 31 Aug. 1869, a German newspaper published at Reading, Berks County, Pa., U.S., from which the following account is translated and condensed. Prof. Notz, of Allentown, who is preparing a Penn-sylvania German grammar, drew attention to the recent German publications on Frankish, Upper-Bavarian, Palatine, Swabian, and Swiss dialects, and asserted that the Penn. Germ. had an equally tough existence (zähes Leben) and deserved as much study. Mr. Dan E. Schödler declared that the Germans of Pennsylvania could only be taught literary high German, in which their divine service had always been conducted, by means of their own dialect. Dr G. Kellner justified dialects. He considered that linguists, including J. Grimm, had not sufficiently compre-hended the importance of dialects. Speech was as natural to man as walk-

ing, eating, and drinking, and the original language of a people was dialectic, not literary, which last only finally prevailed, to use Max Müller's expression as the high language, (Hochsprache). The roots of a literary language were planted in its dialects, whence it drew its strength and wealth and which it in turn modified, polished and ennobled. Was Penn. Germ. such a dialect? Many English speakers, who knew nothing of German dialects, might deny it, and so might even many educated north Germans, who were unacquainted with the south German dialects, and regarded all the genuine southern forms of Penn. Germ. as a corrupted high German or as idioms borrowed from the English. They would therefore style it a jargon, not a dialect. Certainly, the incorporation of English words and phrases had given it some such appearance, but on re-moving these foreign elements it remained as good a dialect as the Alsatian after being stripped of its Gallicisms, in which dialect beautiful poems and tales had been written, taking an honourable position in German literature. Penn Germ., apart from its English additions, was a south German dialect, composed of Frankish, Swabian, Palatine, and Allemanic, which was interlarded with more or less English, according to the counties in which the settlements had occurred; in some places English was entirely absent. All that marked a dialect in Germany was present in Penn Germ., and since new immigration was perpetually introducing fresh high German, the task would be to purify the old dislect of its English jargon, and use the result for the benefit of the people

words have been interwoven, without interfering with such grammatical forms as had been left, and containing occasionally complete English phrases. On referring to the first sentence of the last paragraph, the exact analogy of Pennsylvania Dutch to Chaucer's English will be at once apprehended. The dialect is said to possess a somewhat copious literature, and it is certainly an interesting study, which well deserves to be philologically conducted. For the present work it has an additional special value, as it continually exhibits varieties of sound as compared with the received high German, which are identical with those which we have been led to suppose actually took place in the development of received English, as (oo, ee, AA) for (aa, ai, au).

The orthographical systems pursued in writing it have been two, and might obviously have been three or more. The first and most natural was to adopt such a German orthography as is usually employed for the representation of German dialects, and to spell the introduced English words chiefly after a German fashion. This is the plan pursued, but not quite consistently, in the following extract, for which I am indebted to Dr. Mombert. The English constituents are italicised as the French are in the following edition of the prologue. A few words are explained in brackets [], but any one familiar with German will understand the original, which seems to have been written by an educated German familiar with good English.

of Pennsylvania. The Penn. Germ. press was the champion of this movement, by which an entire German family would be more and more imbued with modern German culture. As a striking proof of the identity of Palatine with Pennsylvanian German, he referred to Nadler's poems called Freklich Pfalz, Gott erhalt's, which, written in the Palatine dialect, were, when read out to the meeting by Dr. Leisenring, a born Penn. German, as readily intelligible to the audience as if they had been written in Penn. German. Prof. Notz also observed that in Germany the people still spoke among one another in dialects, and only exceptionally in high German when they spoke with those who had received a superior education—and that even the latter were wont to speak with the people in their own dialect. This was corroborated by Messrs. Rosenthal, Hesse, and others. On the motion of Prof. Notz, it was resolved to prosecute an inquiry into the Germanic forms of expression in use in Pennsylvania, and to report thereon, in order to obtain materials for a complete characterisation of the dialect.

¹ Prof. S. S. Haldeman, of Columbia, Pennsylvania, to whom I have been under great phonetic obligations, and who has been familiar with the dialect from childhood, has promised to furnish the Philological Society with some systematic account of this peculiar hybrid language, the living representation not only of the marriage of English with Norman, but of the breaking up of Latin into the Romance dialects. The Rev. Dr. Mombert, formerly of Lancaster, Pennsylvania, but now of Dresden, Saxony, who has long been engaged in collecting specimens, has also promised to furnish some additions. The preceding note shews the interest which it is now exciting in its native country. In this place it is only used as a passing illustration, but through the kindness of these competent guides, I am enabled to give the reader a trustworthy account so far as it goes.

² Thus $\bar{\epsilon}y$ is used for ϵe in $k\bar{\epsilon}yn = (keen)$, or rather (keein) according to Dr. Mombert, and ϵe for $i\lambda$ (ii) in Teer, which are accommodations to English habits. Cowskin retains its English form. A more strictly German orthography is followed in L. A. Wollenweber's Genülde aus dem Pennsylvanischen Volksleben, Philadelphia und Leipzig, 1869,

The second style of orthography is to treat the whole as English and spell the German as well as the English words, after English This apparently hopeless task,3 was undertaken by Mr. analogies. Rauch, who in his weekly newspaper, Father Abraham, has weekly furnished a letter from an imaginary Pit i.e. Peter Schwefflebrenner, without any interpretation, and in a spelling "peculiarly his own." Perhaps some of the popularity of these satirical letters is due, as

1 South German letz, letsch, lätsch, wrong, left-handed, as in high German links, for which Prof. Haldeman refers to Stalder, and to Ziemann, Mittel-hochdeutsches Wörterb. 217. See also Schmeller, Bayerisches Wörterb. 2, 530, "(Mior is letz) mir ist nicht recht, d. h. übel." Compare high German verletzen, to injure.

2 Dr. Mombert considers gleichen in this sense of "like, approve of," to be the English word like Germanized. But Dr. Stratmann, on seeing the passage, considered the word might be from the old high German lichen, to please. This verb, however, was intransitive in all the Germanic dialects, and in old English (see Prol. 777 below: if you liketh, where you is of course dative). The present active use seems to be modern English, and I have therefore marked it accordingly.

- 3 An attempt of Chaucer's scribes to write his language after Norman analogies, as Rapp supposes to have been the case, would have been precisely analogous. Fortunately this was not possible, suprà p. 588, n. 4, or we might have never been able to recover his pronunciation.
- In the prospectus of his newspaper, Mr. Rauch says: "So weit das mer wissa, is der Pit Schwefflebrenner der eantsich monn in der United States dærs Pennsylvanish Deitsh recht shreibt un bushtaweert exactly we's g'shwetzt un ous g'shprocha wærd," i.e., as far as we know, Pit Schwefflebrenner is the only man in the United States who writes and spells Pennsylvania German correctly, exactly as it is gossipped and pronounced.

some of the fun of Hans Breitmann's Ballads' certainly is, to the drollness of the orthography, which however furnishes endless difficulties to one who has not a previous knowledge of the dialect.2

The third orthography would be the usual high German and

¹ Hans Breitmann's "poems are written in the droll broken English (not to be confounded with the Pennsylvanian German) spoken by millions-mostly uneducated—Germans in America, immigrants to a great extent from south-ern Germany. Their English has not yet become a district dialect; and it would even be difficult to fix at present the varieties in which it occurs." Preface to the 8th edition of Hans Breitmann's Party, with other Ballads, by Charles G. Leland, London, 1869, p. xiii. In fact Mr. Leland has played with his dialect, and in its unfixed condition has made the greatest possible fun out of the confusion of p with b, twith d, and g with k, without stopping to consider whether he was giving an organically correct representation of any one German's pronunciation. He has consequently often written combinations which no German would naturally say, and which few could, even after many trials, succeed in pronoun-cing, and some which are scarcely cing, and some which are scarcely stackable by any organs of speech. The book has, therefore, plenty of vis comica, but no linguistic value.

The following incons

The following inconsistencies pointed out by Prof. S. S. Haldeman, inconsistencies are worth notice, because similar absurdities constantly occur in attempts to reduce our English dialects, or barbaric utterances, to English analogies, by persons who have not fixed upon any phonetic orthography, such as the Glossotype of Chap. VI., § 3, and imagine that the kaleidoscopic character of our own orthography is not a mere "shewing the eyes and grieving the heart." Prof. H. says: "The orthography is bad and inconsistent, sometimes English and sometimes German, so that it requires some knowledge of the dialect, and of English spelling to be able to read it.

"The vowel of they occurs in ferstay, meh, nay, ehns, bos and base (= bose, angry), hæst (=heisst, called) eawich, daet, gea—ea being mostly used (as in heasa, toicea); but gedreat (also dreet) rhymes its English form treat, and dreat, (=dreat, turns) with fate.

"The German a is as in what and fall, but the former falls into the vowel of hut, but. Fall is represented by ah in betzahla, and aa in paar, but usually by aw (au in sauga) as in aw (auch, also) g'sawt (said, gesagt). Hawa = haben, should have been haw-wa. The vowel of what is represented by a or o, as in was, war, hab, kann, donn,

norra, gonga.
"O of no occurs in bohna, so amohl, =einmal, coaxa (=to coax!) doch, hoar (= haar hair), woch, froke.

"When German a has become English u of but, it is written u, as in hut = hat, has), and a final, as in macha, denka = denken, [which = (v)], an = ein.

"The vowel of field occurs in wie, shpiela, de, shees, kreya = (kriight), y is used throughout for (gh) of regen. The y of my occurs in sei, si, my and mei, bei, dyfel, subscriba.

" W, when not used as a vowel, has its true German power (bh), as in tswea = zwei, hawa = haben, weasht = weisst, wenich and weanich! = wenig, awer = aber, and some other examples of b have this sound.

"Das is for dass that, and des is The s used for the neuter article das. is hissing (s). The r is trilled (.r) as in German. P b, t d, k g, are confused. The lost final n is commonly recalled by a nasalised vowel.

"Oo in fool, full, appears in un, when used for und, uf for auf, wu = wo where, Zeitung pure German, shoola = schools. trurel = trouble.

" English words mostly remain English in pronunciation, as in: meetinghouse, town, frolic, for instance, horse-race, game poker shpecla, bensa pitcha = pitch pence, uf course; but many words are modified when they cross a German characteristic, thus greenbacks, the national currency, is rather (kriin-

peks).
"The vowel of fat occurs in Bärricks = Berks county, lodwärrick lodwærrick = latwerge electuary, kærrich = kirche, wært = werth, hær = her. -le is only an English orthography for

el or 'l, sh is English."

English orthographies for the words used, which would of course convey no information respecting the real state of the dialect. only proper orthography, the only one from which such information can be derived, is of course phonetic. The kindness of Prof. Haldemann has enabled me to supply this great desideratum. passage selected is really a puff of a jeweller's shop in Lancaster, Pa., and was chosen because it is short, complete, characteristic, varied, and, being not political, generally intelligible. It is given first in Mr. Rauch's peculiar Anglo-German spelling, and then in Prof. Haldemann's phonetic transcript, afterwards by way of explaining the words, the passage is written out in ordinary High German and English, the English words being italicised, and finally a verbal English translation is furnished. On pp. 661-3 is added a series of notes on the peculiarities of the original, referred to in the first text. The reader will thus be able to form a good idea of the dialect, and those who are acquainted with German and English will thoroughly appreciate the formation of Chaucer's language.

1 Professor Haldeman not having spoken the dialect naturally for many years, after completing his phonetic transcript, saw Mr. Rauch the author, and ascertained that their pronunciations practically agreed. The phonetic transcript, here furnished, may therefore be relied on. Prof. Haldeman being an accomplished phonetician, and acquainted with my palacotype wrote the pronunciation himself in the letters here used. Of course for publication in a newspaper, my palaeotype would not answer, but my glossotype would enable the author to give his Pennsylvania German in an English form and much more intelligibly. Thus the last paragraph in the example, p. 661, would run as follows in glossotype, adopting Prof. Haldeman's pronunciation: "Auver iyh kon der net olläs saughä. Varr [vehrr] mainer vissä vil, oonn varr [vehrr] färrst raiti Krishtaukh sokh vil – dee faaynsti oonn beshti bressents, maukh selverr dorrt ons Tsaums gaia, oonn siyh selverr soota. Noh mohrr et press'nt. Peet Shveff'lbrennerr." But the proper orthography would be a glossotype upon a German instead of an English basis The following scheme would most probably answer all purposes. The meaning of the symbols is ex-plained by German examples, unless otherwise marked, and in palaeotype. Long vowels: ie lieb (ii), ee beet (ee), ae sprüche (BB, &&), aa Aal (aa), ao Eng. awl (AA), oo Boot (oo), uh Pfuhl

(uu), ue Uebel (yy), oe Oel (œœ). Short Vowels: i Sinn (i, i), e Bett (e, E), ä Eng. bat (E, E), a all (a), & Eng. what (A o), o Motte (o o), u Pfund (u, u), ü Fülle (y), ö Böcke (œ), ö eins (u), Eng. but (u, a), (,) sign of nasality. DIPHTHONOS: ai Hain (ai), oi Eng. joy, Hamburgh Eule (oi), aŭ theorical Eule (oi) and the control Eule (oi) retical Eule (ay), au kauen (au).
Consonants: j ja (j), w wie (bh),
Eng. w (w) must be indicated by a change of type, roman to italic, or conversely, h heu (H), p b (p b), t d (t d), tsch dsh (tsh dzh), k g (k g), kH (kH), f v (f v), th dh (th dh), ss Nüsse (s), s wiese (z), sch sh (sh zh), ch gh (kh kh, gh gh), r l m n (r l m n), ng nk (q qk). German readers would not require to make the distinction ss, s, except between two vowels, as Wiese, Nüsse, Fuesse. They would also not find it necessary to distinguish between e, ë final, or between er. ër, unaccented. For similar reasons the short vowel signs are allowed a double sense. This style of writing would suit most dia-lectic German, but if any additional vowels are required ih, eh, ah, oh, are available. The last sentence of the following example, omitting the distinction e, ë, would then run as follows: "Aower ich kon der net olles saoghe. Waer meener wisse wil, un waer ferst reeti Krischtaoch sokh wil, -die fainsti un beschti bressents, maokh selwer dort ons Tsaoms geeë, un sikh selwer suhte. Noo moor et press'nt. Piet Schwefflbrenner." 1.

Mr. Father Abraham, Printer— Dear Sir: 1 can myself now not help—I must to-thee now once write, how I and the Barbara managed [i.e. fared] have there past, as we in the town Lancaster were.

Notes on the above Text.

1 Mister is used as well as the German form (meesh t'r). - S. S. Haldeman.

² Father Abraham means the late president Abraham Lincoln, assumed the title of Rauch's newspaper.

3 The guttural omitted, as frequently im nicht, nichts.

4 The infinitive -e for -en, as frequently in Chaucer, and commonly now on the Rhine.

^a Einmal, a common expletive, in which the first syllable, even among more educated German speakers sinks into an indestinct (B). Observe the transition of (a) into (oo).

• The common change of (b) into

(bh).

Bevvy, or Pevvy, is a short form of Barbara, a rather common name in the dialect. Both forms are used in the following specimen.—S.S.H. German Babbe, Babchen, compare the English Bab. Babby.

- ⁸ Doh here, fergonga recently, an adverb, not for vergangene Woche.-S. S. H.
- 9 Observe the frequent change of the German au, indisputably (au, au) into English (AA), precisely as we find to have occurred in English of the xvii th century.

io The not unfrequent changes of o long into (uu) are comparable to similar English changes xv th century.

11 Onna, the preposition an used as a verb, as in the English expression, "he ups and runs." I take this view because sind is an auxi.iary and a present tense form, but the adverbial tendency of onna (as if thither) must nevertheless not be overlooked. A German will sometimes use in English an expression like "outen the candle!" rarely heard in English-S S. II.

Observe here a German plural termination s affixed to an English

word.

18 Ecks being feminine, the correct form is an der Ecke, although -eck in composition is neuter, as dreieck, viereck.—S.S.H. In Schmeller's Bayr. Wört. 1, 25, "das Eck, eigentlich Egg" is recognized as south German. In the following word fun for von, short o becomes (u) or (u).

14 This change of German a to o is common, as in (shloof B) for schlafen, (shoof) for schaf, etc.—S.S.H. See note 5, and compare this with the change of ags. (aa) into South English (00, 00), while (aa) remained in the

North.

15 This frequent and difficult word has been translated selbiges throughout, as the nearest high German word, and selly, 9 lines above it, may, in fact, indicate this form. Compare Schmeller's Bayr. Wort. 3, 232, "Selb [declinabel] in Schwaben öfter nach erster Declin Art (sel er, e, es), in A. B. lieber nach zweiter [der, die. das (s'l, den s'ln, di s'ln), etc.] gebraucht, statt des hochd. jener, e, es, welches un-volksüblich ist. [Für der, die, das selbe im hochd. Sinn, d.h. idem, eadem, idem, braucht die Mundart der die, das nemliche.] (s'l əs mal, des s'l mal, s'l malz) jenes Mel. (s'l ə tsait) zu jener zeit, (s'l ət-нalb·m) oder (-bhegq) des[jenigen] wegen."

16 Sawgt = sagt, says, secht = sägt,

instead of sagte, said, with the Umlaut.
—S. S. H. The weak verb has there-This distincfore a strong inflection. tion is preserved throughout. Compare the common vulgar (and older?) forms slep, swep, with the usual slept, wept,

and see suprà p. 355, art. 54.

17 Genunk, with educed k, is common in archaic and provincial German, and Rollenhagen rhymes jung, pronounced junck dialectically, with trunk. -S. S. H. See suprà p. 192, n. 1.

18 (Pit) or (Piit) may be used for this short form of Peter.—S.S.H. It is the English Petc, not a German

form as the vowel shews

19 Observe the vowel educed by the strong trill of the (r). For convenience (r has been printed throughout, but the reader must remember that it is always distinctly, and sometimes forcibly, trilled with the tip of the tongue, and never sinks to (1).

20 Das wann, that though, as though. -S S. H. Gookts das wann, for sicht es aus als ob, it looks as if.

See note 36.

²¹ Observe the German infinitive termination -e for -en, added to a

purely English verb.

24 The development of s into (sh) is remarkable in high German. acknowledged as the proper pronunciation before t, p at the beginning of a syllable, throughout Germany, even North German actors not venturing to say (st-, sp-) even in Hamburg, as I am informed, the capital of that pronunciation. But in final -st, the common (-sht) is looked upon as a vulgarism, even in Saxony.

23 Karls, may have an English s, but the form is often playfully used by good speakers in Germany, and hence may have been imported and not

adopted.

24 Hinnich for hinter has developed a final -ig, but this is a German ad-

23 Gedropt, the German participial form for dropped. So also elsewhere I find gepunished, which may be compared with Chaucer's ypunish'd, Prol. v. 657.

²⁶ Orrig, very, Swiss arig (Stalder 1, 110), German arg, but not used in a bad sense.—S.S.H. The word arg implies cunning and annoyance, but its use as an intensitive is comparable to our horrid, awfully, dreadfully, which are frequently used in a good sense, as: horrid beautiful, awfully nice, dreadfully crowded. Das ist zu arg! that is too bad, too much! is a common phrase even among educated Germans.

21 Aw for German an is nasalised. which distinguishes it from the same syllable when used for the German auch, also. — S. S. H. This recent evolution of a nasal sound in German, common also in Bavarian, may lead us to understand the comparatively recent nasal vowels in French, infrå Chap. VIII, § 3.

28 The gender is changed because it refers to a man; so in high German it is not unfrequent to find Fraulein, Mädchen, although they have a neuter adjective, referred to by a feminine pronoun, as: "das Fräulein hat ihren Handschuh fallen lassen," the young lady [neuter] has dropped her [fem.]

29 In an earlier line g'sea for geschen, but here we have a double infinitive, as if zu sehenen. This is also used for the third person plural of the present tense, as in sie gehen-a, they go.— S.S.H. Compare also ich hab dich, wehl geseyhne, in the Gespräch, p. 654. This seems comparable to what Prof. Child calls the protracted past participle in Chaucer, suprà p. 357, art. 61. It is impossible to read the present specimen attentively without being struck by the similarity between this Pennsylvania German and Chaucer's English in the treatment of the final -e, -en of the older dialects. The form (sel-bher) in the preceding line preserves the b in the form (bh). Schmeller also allows selber to preserve the b as (s'I-ba), see n. 15.

to preserve the b as (s'l'ba), see n. 15.

To Das eam weist, that shews him, that shews to one or a person.—

S. S. H. Eam = einem, not ihm.

This als is Swiss, which Stalder defines by ehedem hitherto and immer always, compare ags. eal-enge altogether and eal-wig always.—S.S.H. See also Schmeller Bayr.-Wort. 1, 50. Dr. Mombert takes als to be an obsolet high German contraction of alles in the sense of ever, mostly, usually.

prof. Haldeman takes uf for auf, but der Meinung, and not auf der Meinung, is the German phrase, and hence the word may be English, as afterwards uf course. But this is hazardous, as uf in this sense could hardly be joined with a German dative der Meinung. Can als uf be a dialectic expression for alles auf, literally all up, that is, entirely? Compare, Schmeller, Bayr. Wört. 1, 31, "auf und auf, von unten (ganz, ohne Unterbrechung) bis oben, auf und nider vom Kopf bis sum Fuss, ganz und gar."

23 Cheemany is the English exclamation Oh jeemany.—S.S.H. The English is apparently a corruption of: Oh Jesus mihi, and has nothing to do with the Gemini. But what is the last part of this exclamation: fires? Prof. Haldeman. suggests, hell fires? Dr. Mombert derives from the shout of: fire? Can the near resemblance in sound between cheemany and chimney, have suggested the following fires? Buch things happen.

31 For in de office ni du seems to stand for um in die office hinein zu thun. The use of for for um is a mere Angliciem, but why is zu omitted before thun? By a misprint, or dialectically for euphony? It is required both by the German and English idiom. Dr. Mombert considers the omission of zu dialectic in this place, elswhere we find zu do.

36 Boll amohl, bald einmal, pretty soon, shortly. This use of einmal once, appears in the English of Germans, as in: "Bring now here the pen once."
—S.S.H.

Nas. This is not the neuter nominative article das, which is des in this dialect, but a contraction of als dass, with the most important part, als, omitted.—S.S.H. I am inclined to take it for dass used for als, as in the former phrase das wann = als ob, see note 20. According to Schmeller, Bayr. Wört. 1, 400 "dass schliesst sich als allgemeinste conjunction, in der Rede des Volkes, gern andern conjunctionen erklärend an, oder vertritt deren Stelle."

³⁷ Watch-ketta, a half English, half German compound, is comparable to Chaucer's footmantel, half English and half French, in Prol. infrà, v. 472, and suprà p. 651, l. 6.

ike the German einig, treated like einiger, or it may be a legitimate development of this, as eins is eens.—
S.S.H. The latter hypothesis seems the more probable, and then the English signification may have been attached to the German word from similarity of sound. Dr. Mombert thinks the word may be either any treated as a German word, or irgend einer corrupted. Observe the frequent use of (ee) for (ai) as eens for eins. The transitions of (au) into (AA), (ai) into (ee), (aa) into (oo), and ocasionally (o) in (u), are all noteworthy in connection with similar changes in English.

39 Meaner for mehr is obscure. Compare Schmeller, Bayr. Wört. 2, 581; "manig, Schwab. menig, meng. a) wie hochd, manch... Comparativisch steht in Amberg. Akten v. 1365 "An ainem stuck oder an mengern."... Sonst hört man im b. W. wie in Schwaben einfacher den Comparativ mener, mehr, welcher cher aus (mee, mee) als aus menger entstellt scheint; oder sollte es noch unmittelbar zum alten mana- gehören?"

F. W. GESENIUS ON THE LANGUAGE OF CHAUCER.

Two German scholars, Professors Gesenius and Rapp, have published special studies on the language and pronunciation of Chaucer, of which it is now necessary to give an account. The following is a condensed abstract of the treatise entitled: De Lingua Chauceri commentationem grammaticam scripsit Fridericus Guilelmus Gesenius, Bonnae, 1847, 8vo. pp. 87. The writer (who must not be confounded with the late Prof. Wilhelm Gesenius, of Halle, the celebrated Hebraist.) used Tyrwhitt's text of the Canterbury Tales, according to the 1843 reprint. In the present abstract Wright's spelling and references to his ed. of Harl. MS. 7334 (which have all been verified) are substituted, and much relating to the peculiarities of Tyrwhitt's text is omitted; inserted remarks are bracketed. Gesenius's ags. orthography has been retained.

PART I. THE LETTERS.

Chaucer seems to add or omit a final at pleasure, both in ags. and fr. words, as was necessary to the metre; and he used fr. words either with the fr. accent on the last syllable or with the present English accent, for the same reason.

Chap. 1. Vowels derived from Anglo-Saxon.

Short vowels are followed by two consonants, or by either one or two in monosyllables, and long vowels have a single consonant followed by e final.

1. Ags. short a is preserved in: land 402, hand 401, bigan 5767, ran 4103, drank 6044, thanked 927; but fluctuates often between a and o. as: londes 14, hond 108, outsprong 13526, bygon 7142, nat 2247, drank 13970, i-thanked 7700 [in the three last cases, Tyrwhitt has ol.

Short a answers to ags. \ddot{a} , according to Grimm's separation $\ddot{a} = \text{goth. } a$, and $\ddot{a} = \text{gothic } \dot{c}$, as: what, that pron., ags. hvät jät; atte. ags. at 29; glas 152, have ags. häbban, etc.

Short a also answers to ags. ca, as in: alle ags. call 10, scharpe ags. scearp 114, halle 372, barme 10945, starf 935, 4703, halpe [Tyrwhitt, hilp Wright] 5340, karf 9647, hals 4493.

Long a is either a preserved ags. a long, or a produced ags. a short, as: make ags. macjan 4763, name, fare 7016, ham, ags. hâm 4030. That this last word was pronounced differently to the others, which probably even then inclined to \dot{a} ($r\nu$), is shewn by its interchange with home, whereas a always remains in make, name, etc.

Long a also arises from ags. a short, as: smale ags. smal 9, bar 620; fadur 100, blake 2980, this last vowel is sometimes short as 629.

Long a like short a also arises from ags ëa. as: gaf. ags. gëaf 177, mary, ags. mëarh 382, jape ags. gëap 4341, ale 3820, gate 1895, care, etc.

II. Chaucer's e replaces several distinct ags. vowels.

Short e stands

for ags. e short, in: ende 15, wende 16, bedde, selle 3819, etc.

for ags. i, y, in: cherche (Wr. chirche), ags. circe 4987; selle ags. syl, threshold, 3820, rhyming with selle, ags. syle; scheeld ags. soyld 2895, rhyming with heeld, ags. heold, kesse ags. cyssan 8933; stenten, ags. stintan 906; geven, ags. gifan, gyfan 917, etc. These forms are only found when wanted for the rhyme, and i is the more common vowel.

for ags. ëa, ed in: erme, ags. ëarmjan 13727; erthe, ags. ëard, ëoroe 1898; ers, ags. ëars 7272; derne, ags. dëarn 3200, 3297; berd 272; est, ags. ëast 1905.

for ags. eo in: sterres, ags. steorra 270; cherles ags. ceorl, ger. kerl, 7788; yerne ags. georne, ger. gern, 6575; lerne ags. leornjan. 310; swerd 112, werk 481, derkest 4724; yelwe, ags. geolu 677.

Long e stands

for ags. short e in: ere, ags. erjan 888; queen. ags. even 870, etc.

for ags. long ϵ , more frequently, in: seke, ags. secan 13; kene 104, grene 103. swete 5, mete 1902, wepyng 2831, deme 1883.

for ags. se long: heres, ags. haer 557; breede, 1972; lere, ags. laeran 6491; see 59, yeer 82, reed 3527, slepen 10, clene 369, speche 309, strete 3823, etc.

for ags. čó as in : seke, ags. séóc 18, as well as: sike, ags. sioca 245, these diphthongs ω , $i\omega$, had probably a similar pronunciation and are hence frequently confused, so heofon, hiofon, and lēóð, lióð; scheene, ags. scëónë, beautiful, 1070; leef 1839, theef 3937; tene, ags. tëona, grief, 3108; deepe 129, chese 6480, tree 9337, tre 6341, prestes 164, prest 503, etc.

for ags. ës and ed in : eek 5, gret 84, beteth 11078, neede 306, reede 1971, bene 9728, chepe 5850, deef 448, stremes 1497, teeres 2829, eet 13925, mere 544.

Nothing certain can be concluded concerning the pronunciation of these 's, which arose from so many sources. They all rhyme, and may have been the same. In modern spelling the e is now doubled, or more frequently reverts to ca.

III. The vowel i has generally remained unchanged at all periods of the language. Mention has already been made of its interchange with e where the ags y was the mutate of u or ēo, io, thus: fist 6217, fest 14217, ags. fyst; mylle 4113, melle 3921, ags. myll; fel 5090, fille 10883, ags. feol; develes 7276, devyl 3901 [divel Tyrwhitt, deuci Heng. and Corp.], ags. dioful.
The i generally replaces ags. y, and e replaces ags. io. Long i similarly replaces long ags. y, as occasionally in ags. Short ags. i seems to have been lengthened before id, nd, [no reasons are adduced,] as in: wylde 2311, chylde 2312, fynde 2415, bynde 2416. Undoubtedly this long i was then pronounced as now, namely as German (ai). [Pronunciatio longse vocalis sine dubio iam id aetatis eadem fuit quam nunc, id est ei.] In the contracted forms fint, grint for findeth, grindeth, there was therefore a change of vowel, fint having the German short i, and findeth German ei. [No reasons adduced.]
IV. Short o stands

for ags. short o in: wolde 651, god 1254.

for ags. short w: somer ags. sumer 396; wonne ags. wunnen 51; nonne 118, sonne 7, domb 776, dong 532, sondry, ags. sunder, 14, 25. Nearly

all these words are now written with a. and preserve Chaucer's pronunciation, for summer is written, but sommer spoken [i.e. Gesenius did not distinguish the sounds (a, o).]

for ags. short a, as already observed, and o is generally preferred before nd, and remains in Scotch and some

northern dialects.

Long o stands for ags, long o in : bookes, ags. bôc, 1200; stooden 8981, stood 5435, took 4430, foot 10219, sone 5023, sothely 117, etc.

for ags. long a in: wo, ags. vâ 8015, moo 111, owne, ags. agen 338, homly 7425, on 31, goest 205, hoote 396, ooth 120, loth 488. In such words a is uncommon, the sole example noted being ham 4030. Both o's rhyme together and were therefore pronounced alike. At present the first is u and the second o.

for ags. short u in: sone 79; wone,

ags. vunjan 337, groneth 7411.

V. Short w stands for ags. short w in : ful, ags. full 90, lust 192, but 142, cursyng 663, uppon 700, suster 873, shulde probably arose from some form sculde, not scëolde, as we have no other instance of ags. ëo becoming short w. There is no long u in Chaucer.

VI. The vowel y is occasionally put for i.

VII. The diphthong ay or ai stands for ags. \$\bar{ag}\$ in: day, ags. dag 19, weie 793, lay 20, mayde 69, sayde 70, faire 94, tayl 3876, nayles 2143, pleye 236, reyn 592, i-freyned, ags. fragnan 12361. These examples shew that ey was occasionally written for ay, and hence that ey, ay must have been pronounced alike.

VIII. The diphthong ey or ei arose from ags. et as in: agein, ags. agean 8642, or from edg as: eyen, ags. eage 152, deye, ags. deagan 6802, [mori, is there such a word in ags. P it is not in Bosworth or Ettmüller; Orrmin has devens. suprà p. 284. There is a dezenn, suprà p. 284. There is a deagan tingere.] The change in these two last words may be conceived thus: first g is added to e, then replaced by j (J) and finally vanishes, as eige, eije, eie or eye. From eah comes eigh, as ëahta, hedh, nedh, sledh, which give eyght, heygh, neygh, sleygh. This orthography is however rare, and highe, nighe, slighe, or hie nie slie, without gh, which was probably not pronounced at that time, are more common. The

word eight explains the origin of night, might, etc., from ags. neaht, meaht, which were probably first written neight, meight, and then dropped the [There is no historical ground for

this supposition.]
IX. The diphthong ou, or ow at the end of words or before e, answers to ags. long u (as the German au to medieval German \hat{u}), in: bour, ags. bûr 15153, oure 34, schowres 1, toun, ags. tûn 217; rouned, ags. rûn 7132, doun, ags. dûn 954; hous 252, oule 6663, bouk, ags. bûce, Germ. bauch, 2748, souked 8326, brouke, ags. brûcan, use. 10182, etc. In many of these words ou is now written.

Before ld and nd, ou stands sometimes for ags. short u. Before gh, ou arises from ags. long o, and answers to middle German uo, as: inough, ags. genôg, mhg. genuoe 375; rought, ags. rôhte 8561, 3770, for which au is sometimes found, compare sale 4185, sowle 4261.

Finally ou sometimes arises from ags. ëóv, as in: foure, ags. fëóver 210; trouthe, ags. treovth, 46, etc.

X. The diphthong eu, ew, will be treated under w.

Consonants derived from Chap. 2. Anglosaxon.

I. Liquids I, m, n, r.

L is usually single at the end of words, though often doubled, as it is medially between a short and any vowel, but between a long vowel and a consonant it remains single.

The metathesis of R which occurs euphonically in ags., is only found in: briddes 2931, 10925; thrid 2273, threttene 7841, thritty 14437; thurgh 2619. But as these words have regained their primitive forms bird, third, through, we perceive that the metathesis was accidental. In other words the transposed ags. form disappears in Chaucer, thus : gothic rinnan, ags. irnan, Chaucer renne 3888; frankie drëscan, ags. përscan, Ch. threisshe 538, threisshfold 3482 ags. þrësevold, þërsevold; frank. prëstan, ags. bërstan, Ch. berst [Harleian and Lansdowne bresten Ellesmere and Hengwurth, and Corpus, brestyn Cambridge,] 1982; goth brinnan, ags. bir-nan, Ch. bren 2333; modern run, [urn in Devonshire], thrash, but burn

burst.

II. Labials b, p, f, w.

B is added euphonically to final m in

lamb 4879, but not always, as lymes 4881, now limbs.

P is used for b in nempnen 4927.

F, which between two vowels was v in ags., is lost in heed 109, ags. heafod, heavod. There seems to be a similar elision of f from ags. efenford in enforce 2237 [emforth Ellesmere, Hengwrt, Corpus, enforte Cambridge, hensforth Petworth, enforpe Lansdownel, compare han for haven 754, 1048, etc. F is generally final, as: wif 447, lyf 2259, gaf 1902, haf 2430, stryf 1836 knyf 3958, more rarely medial, [the instances cited have final f in Wright], where it is generally replaced by v, not found ags., as: wyve 1862, lyves 1720, geven 917, heven 2441, steven, ags. stefen 10464; havenes 409.

V is never used finally, but is replaced by 10, followed sometimes by 6, as: sawgh 2019, draw 2549, now 2266, sowe 2021, lowe 2025, knew 2070, bliew 10093, fewe 2107, newe 17291, trewe 17292. In the middle of a word aw, ow are replaced by au, ou, but before v, w is retained, as: howve

3909, schowve 3910.

Warises from ags. g, as in: lawe, ags. lagu 311; dawes, ags. däg, 11492, and as day is more common for the last, we also find lay for the first, 4796. Compare also fawe ags. faegen 5802 rhyming with lauce, i-slawe 945, for fain, slain. W also replaces g in: sawe 1528, 6241, mawe 4906, wawes 1960, sorw 10736, morwe 2493, borwe 10910, herberw 4143, herbergh 767, 11347.

III. Linguals d, t, th, s. The rule of doubling medial consonants is neglected if D stands for ags. 5.

as: thider 4564, whider 6968, gaderd, togeder, etc., in the preterits dide 3421, 7073, 8739, and hade 556, 619. [Ellesmere and a few MSS. where it seems to have been an accommodation to the rhymes spade, blade.] Similarly i-written 161, i-write 5086, although the vowel was short in ags. [It is lengthened by Bullokar in the xvi th century. p. 114, l. 7.] Perhaps litel has a long i in Chaucer's time, see 87, 5254.

S final is often single, as: blis 4842,

glas 152, amys 17210.)

The termination es in some adverbs is now ce, as: oones 3470, twyes 4346, thries 63, hennes hens 10972, 14102, henen 4031 [in Tyrwhitt, heythen Ellesmere, heithen Corpus, no cor-responding word in Harleian], henne 2358; thennes 5463, 4930, thenne 6723; whennes 12175.

The aspirate TH had a double character b 5 in ags., and a double sound, which probably prevailed in Chaucer's time, although scarcely recognized in writing. That th was used in both senses we see from : breeth, ags. brack ; heeth, ags. haeo 6; fetheres, ags. feeder 107; forth, ags. ford 976; walketh 1054, etc.; that, ags. paet 10—ther 43, thanked 927. The use of medial and final d for th are traces of 5, as: mayde, ags. maego 69; quod, ags. cvao 909; wheder ags. hvaore 4714 [whether, Wright]; cowde ags. cuo 94; whether and coupe are also found. Again, we also find [in some MSS.] the ags. d replaced by th, in: father 7937, gather 1055, wether, 10366, mother 5433, [in all these cases Wright's edition has d]. But t on the other hand is never put for ags.).

The relation of $t\lambda$, s, is shewn by their flexional interchange in -eth, -es. The elision of the gives wher 7032,

IV. Gutturals, c, k, ch, g, h, j, q, x. K is used before e, i, and c before o, u, hence kerver 1801, kerveth 17272, but: carf 100. Medial ags cc becomes ck or kk, as nekke, ags. hnecca 238; thikke, ags. picca 551; lakketh 2282, lokkes 679. Modern ck after a short vowel is sometimes k, as : seke 18, blake 2980.

Grimm lays down the rule that c, k fall into ch before c, i except when these vowels are the mutates of a, o, u, in which cases k remains, (Gram. 12 615.) cch has arisen from ags. cc in the same way as kk, as : wrecche, ags. vraecca 11332 feeche, ags. feecan 6942; cacche Mel., strecche, recche, etc. Probably the pronunciation was as the present tch.

K was ejected from made, though the form maked remains 2526. reule 173, if it is not derived from the French, the g of ags. regul, regol, has been ejected.

G was probably always hard, and so may have been gg, in: brigge, ags. brycg 3920; eggyng ags. ecg, 10009; hegge, ags. hecg 16704. From this certainly did not much differ that gg which both in Chancer and afterwards æed into i, as : ligge, lye ags. lecgan, 2207; legge, ags. leggan, 3935; abegge, abeye, aga. bycgan 3936.

The g and y were often interchanged, as give yeve, forgete, forgate, gate yate, ayen agen, etc. The y replaced guttural g [due to editor] as in: yere, yonge, yerne, ey; and also in words and adjectives where y arises from ig, as: peny, very, mery, etc., and in the pre-fix y or i for age. ge, as: ylike, ynough, ywis, ymade, yslain, ywriten, ysene, ysowe 5653. And g we have seen is also interchanged with w.

The hard sound of ags. A is evident from the change of niht, leoht, fliht, viht, etc., into night, light, flight, wight, etc.

Ags. so had always changed into sh, German sch. In some words sch replaces sh as: fresshe, ags. fresc 90, wessch 2285, wissh 4873, asehy 2885. There is also the metathesis cs or x for se in axe.

Chap. 3. Vowel mutation, apocope, and junction of the negative particle.

 There is no proper vowel mutation (umlaut), but both the non-mutate and mutate forms, and sometimes one or the other, are occasionally preserved, as: sote 1, swete 5; grove 1637, greves 1497, 1643 to rhyme with loves; welken 9000, ags. wolcen, Germ. wolke; the comparatives and superlatives, lenger, strenger, werst, aud plurals, men, feet, gees.

II. Apocope; lite, fro, mo, tho = than.

III. Negative junction; before a vowel: non = ne on, nother, neithir = ne other, ne either, nis = ne is, nam = ne am; before h or w: nad = ne had, 10212, nath = ne hath 925, nil = newill 8522, nolde = ne wolde 552, nere = ne were 877, not = ne wot 286, nysten = ne wysten 10948.

Chap. 4. Vowels derived from the French.

French words with unaltered spelling were probably introduced by Chaucer himself, and the others had been previously received and changed by popu-

I. The vowel s in unaccented syllables had probably even then approximated to e, and hence these two vowels are often confounded. Thus Chaucer's a replaces fr. e, as, and again Ch. e replaces fr. a, thus: vasselage [see vas-selage, p. 642, col. 2, and sousseyllage, p. 645], fr. vasselage 3056, vilanye [see villany, p. 642, col. 2, and courtesy, p. 644, col. 1], fr. vilenie, vilainie, 728; companye, fr. compaignie 4554, chesteyn [chasteyn, chestayn, in MSS., see p. 642,] fr. chastaigne 2924.

With the interchange of the ags. vowels a, o, we may compare the change of fr. a, au, the latter having probably a rough sound as of ao united, which took place before ne, ns, ng, nd, nt in both languages, but au was more frequent in Chaucer and a in French, as: grevance 11253, grevaunce 15999, and other ance and ant terminations, also: romauns, fr. romance 15305; en-haunsen, fr. enhanser 1436; straunge fr. estrange 10590, 10403, 10381; demaundes, fr. demande 8224; launde fr. lande, uncultivated district, 1693, 1698; tyraunt, fr. tirant 9863, tyrant 15589; graunted 6478, 6595; haunt fr. hante 449. With the exception of the last word all these have now a.

II. Long e frequently arises from French ai, as in: plesaunce, fr. plaisance 2487; appese, fr. apaisier 8309; freeltee, fr. frailete; peere, fr. paire 15540. Sometimes it replaces ie, as: nece, fr. niez 14511; sege 939, siege 56; and the e is even short in : cherte, fr. chierté 11193. Similarly fr. i is omitted in the infinitive termination ier, compare arace, creance, darreine, auter, etc.. in the list of obsolete fr.

Long e also replaces fr. eu in : peple 2662 [the word is omitted in Harl., other MSS. have peple, poeple, puple], mebles [moeblis Harl.] 9188. To this we should refer: reproct 5598, ypreued

[proved Harl., procued Hengwrt] 487.

III. That the pronunciation of ifuctuated between i and e we see by the frequent interchange of these letters; the fr. shews e for lt. i, as: devine 122, divyn 15543, divide 15676, divided 15720 [Tyr. has devide in the first case], enformed 10649, fr. informer, enformer; defame 8416, diffame 8606; surquidrie surquedrie, chivachee chevachie, see obsolete fr. words below.

IV. Chaucer frequently writes o for fr. ou in accented syllables, as: coverchefes [most MSS., keverchefs Harl.] fr. couvrechief 455; corone, fr. couronne 2292; bocler, fr. boucler 4017; governaunce, fr. gouvernance 10625; sovereyn, fr. souverain 67. More rarely Ch. u=fr. ou, as: turne [most MSS., tourne Harl.], fr. tourner 2456; curtesye, fr. courtoisie 15982. V. Fr. o is often replaced by Ch. u,

as: turment [torment Harl.], fr. tormente 5265; abundauntly, fr. habondant 5290; purveans, fr. porveance, pourveance 1667; in assuage 11147, fr. assoager, assouager, the u had certainly the sound of w, compare aswage 16130.

For long u we occasionally find ew, which was certainly pronounced as in the present few, dew, thus: salewith [Harl. and the six MSS. read salueth] 1494, transmewed [translated Harl., transmeeuyd Univ. Cam. Dd. 4, 24] 826 mewe, fr. mue 351 [muwe Ellesmere and Hengwrt MSS.] jewise, fr. juise juwyse Harl. and most MSS., iwes Petworth, iuyse Lansd.] 1741.

VI. The vowels y and i are interchanged in fr. as in ags. words.

VII. The fr. diphthongs ai, oi, usually appear as ei in Chaucer, and must have been pronounced identically, as: seynte, fr. saint 511; doseyn, fr. dosaine 580; chesteyn, fr. chastaigne 2924; peyneth, fr. painer, peiner 4740; coveitous, fr. covoiteux, Mel. These diphthongs interchange in Ch. as well as in fr. [different MSS, differ so much that Gesenius's references to Tyrwhitt's edition on this point are worthless]. For the interchange of a and ai see I.

VIII. When the diphthong ou arose from fr. o, it was perhaps pronounced as long o. This is very probable in those words which now contain o or we in place of the diphthong, but less so in those which have preserved ou; as these had even then perhaps the sound of German au. Ex. noumbre 5607; facound, fr. faconde 13465, soun, fr. son 2434; abounde fr. habonder 16234. [The other examples have o in Wright's ed., or like flour 4 are not to the point; the above are now all nasal on.]

Chap. 5. Consonants derived from the French.

The doubling of final consonants is frequently neglected.

Liquids.

[The examples of doubling I, r, are so different in Wright's ed. that they

cannot be cited.]

P inserted: dampned 5530, dampnacioun 6649; sompne 6929 = somone 7159, sompnour 6909, solempne 209. This p is also often found in old fr. Similarly in Provençal dampna, sompnar, Diez. Gram. 1, 190 (ed. 1.).

II. Labials.

P for b; gipser, fr. gibecier 359; capul, fr. cabal 7732. The letter v, which was adopted from the romance languages into English, had no doubt the same sound as at present, that is, it was the German w, and the w was the German w. [That is, Ges. confuses (v, w) with (bh, u) in common with most Germans.]

As in ags. g passes into German w, so in fr. words initial w becomes g or gr. Whether this change was made in English by the analogy of the ags. elements or from some other dialect of old fr., in which probably both forms were in use, it is difficult to determine. The following are examples: wiket, fr. guichet 10026; awayt, fr. aguet 7239; wardrobe, fr. garderobe 14983. To these appear to belong warice and wasteer, though they may derive from the frankic warjan wastan.

III. Linguals.

Z is an additional letter, but is seldom used, as *lazer* 242. Ch. generally writes s for z.

IV. Gutturals.

C before e, i was probably s as now. Fr. gn now pronounced as German nj, (nj) is reduced to n in Ch., as Coloyne 468, feyne 738, barreine, essoine, oinement. G was doubled after short rowels in imitation of ags.

The aspirate h, which seems to have come from external sources into English, and was scarcely heard in speech, was acknowledged by Ch., but has now disappeared, as: abhominaciouns 4508. In proheme 7919, the h seems only inserted as a discresis.

Fr. qu before e and i is often changed into k, as: phisik 913, magik 418, practike 5769, cliket 10025.

Chap. 6. Aphæresis of unaccented French e, a.

Initial e is frequently omitted before st, sp, sc, as: stabled, fr. establir 2997; spices, fr. espece 3015; specially 14, squyer, fr. escuyer 79, scoler, fr. escolier 262; straunge, fr. estrange 13. Similarly a, e, are rejected in other words where they are now received, as: potecary 14267, compare Italian bottega a shop; prentis 14711, pistil 9030, compare Italian pistola, chiesa. The initial a in severious 16600, has been subsequently rejected.

I. Obsolete Chauærian words of Anglosaxon origin.

[All Gesenius's words are inserted, though some of them are still in frequent use, at least provincially, or have been recently revived. To all such words I have prefixed †. The italic word is Chaucer's, the roman word is ags., meanings and observations are in brackets. Gesenius seems to have simply extracted this list from Tyrwhitt's Glossary without verification, as he has occasionally given a reference as if to Cant. Tales, which belongs to Rom. of Rose. The Mel. and Pers. T. refer to the tales of Melibeus and the Persoun, without any precise indication, as editions differ so much.]

M. RAPP ON THE PRONUNCIATION OF CHAUCER.

Dr. Moritz Rapp, at the conclusion of his Vergleichende Grammatik, vol. 3, pp. 166-179, has given his opinion concerning the pronunciation of Chaucer, chiefly on d priori grounds, using Wright's edition, and has appended a phonetic transcription of the opening lines of the Canterbury Tales as a specimen. This account is here annexed, slightly abridged, with the phonetic spelling transliterated into palaeotype, preserving all the peculiarities of the original, such as absence of accent mark, duplication of consonants, German (bh) for (w), modern English errors of pronunciation, etc. A few remarks are added in brackets.

The liquids are to be pronounced as written, and hence l is not mute, though there is a trace of its disappearance in the form (naf) for (naf). The transposition of r is not complete; we again find (renne) for (irnan), and (brenne) for (birnan), English (rann, børn), (thurkh) through is unchanged, (bird) and (brid) are both used, (threshe) replaces (therskan), and (breste) replaces (berstan), English

Among the labials, b remains after m in (lamb), but (limm) is without the present mute b. For (nemnan) we have the peculiar (nempnen), and similarly (dampnen) to damn. Final f as in (bhiif) wife, is also written medially wive, that is, in the French fashion, because v tended towards f in the middle ages. But initially, in order to preserve the pure German (bh), recourse was had to the reduplication use or w. On w after a vowel see below. (Bh) sometimes arises from a guttural, as sorvee, that is, (sorbhe) now sorrow = (sorroo), from sorg.

Among the dentals d and t occasion no difficulty, and s has, by French influence, become pure (s), [Dr. Rapp holds it to have been (sj) in ags.] especially as it sometimes results from p. The z is merely an s. The most difficult point is th. In ags., we have shewn [suprà p. 555, note] that it had only one value (th). I consider that this is also the case for this dialect. As regards the initial sound, which in the English pronouns is (dh), there is not only no proof of this softening, but the contrary results from v. 12589

So faren we, if I schal say the sothe.

Now, quod oure ost, yit let me talke
to the.

The form sothe has here assumed a false French e, since the ags. is (sooth)

and English (suuth), [it may be the adverbial e, or the definite e, according as the is taken as the pronoun or the definite article,] which must therefore have here been called (soothe), as this th is always hard, and as to the, i.e. (too thee) rhymes with it, shewing that the e of sothe was audible if not long, and that the th of to the was necessarily hard, as the English (tuu dhii) would have been no rhyme, [but see supra p. 318]. Similar rhymes are (aluu thee) allow thee, and (Juuthe) youth, (nii thee) hie thee, and (sbhiithe) quickly, [supra pp. 318, 444, n. 2]. The Anglosaxon value of the letters must be presumed until there is an evident sign of some change having occurred. For the medial English th we have a distinct testimony that the Icelandic and Danish softening of d into (dh) had not yet occurred, for the best MSS. here (fader), now (faadher), (gadersan) here (gader) now (gædhdhər), (togædere) here (togæder) now (togædhdhər), (bhæ-der) here (bhæder) now (uædhdhər), weather, (mooder) here (mooder) now (modhdhar) mother, (khbhider) here (khbhider) now (huidhdhar) whither, (thider) here (thider) now (dhidhdhar) thither. Inferior MS. have father, gather, thither, etc., shewing that the softening of d into the Danish (dh) began soon after Chaucer. But when we find the d in Chaucer it follows as a matter of course that the genuine old by (th) as in (broother, fether) when here written brother, fether, could only have had the sound (th), and could not have been pronounced like the (brodhdhar, fedhdhar). The ags. kube is here (kuth) and also (kud) or (kuud) for (kun-de.)

Among the gutturals, k is written for e when e or i follows, and before s as (knsu) knew. The reduplicated form is ck. The g is pure (g) in the German words, but in French words the syllables ge, gi, have the Provençal seands (dzhe, dzhi), which is certainly beyond the known range of Norman or old French, where g is resolved into simple (zh), but here gentil is still (dehentil) not (zhentil). Similarly romanic ch is (tsh), and this value is applied to old naturalised words, in which the hiss has arisen from k, as (tshertsh) from (kirk), (tsheep) trom (keapsen) from (kirk), (sheep) from (keapsen) cheapen, and in thoroughly German words (tshild from (kild) child; and (ælk) becomes (ætsh) each. Reduplication is expressed by cck, representing the sharpened (tsh) [i.e. which shortens the constitution of the (blymble). preceding vowel] so that (bhrækka) exile becomes ecrecche, and sometimes wratch, which can only mean (bhratsh); similarly from (fekkan) comes (fetshe) and in the same way (retshe, stretshe) and the obscure cacche = (katshe), which comes from the Norman cachier, although (tshase) also occurs from the French chasser. The reduplicated gconsions some difficulty. In French words abbregier can only give abregge =(sbredzhe), and loger gives (lodzhe), et, but the hiss is not so certain in brige bridge, egge edge, point, hegge bedge, as now prevalent, because we find also ligge and lie from (liggan) how (lai), legge and (IRRie) from (leg-ta) now (lee), and (abexie) from (lyggen) now (bai). Similarly (begge) at, beg, now (brg), which, as I beheve, was formed from (buugan) or (bugean) to bow. Here we find modem (dzh) and hence the (dzh) of the brner cases is doubtful.

The softening of g into (1) is a slighter difference. The letter (1) does not occur in ags., and has been replaced an uncertain way by i, g, ge. In Chaucer the simple sign y is employed more generally z, the y is due to the liter, p. 310], which often goes further than in English, as we have not ly (ser) a year, but give and (seve, forsete, set, ssen, ssens) and (EE)

The termination ig drops its g, as prin for penig, and the particle ge sumes the form i, as (inuukh) enough, ibhis certain, and in the participles itsen taken, (imaad) made, (islaa) [ulken] slain, (iseene) seen, (ibhriten) uniten, etc. From (geliike) comes

(iliik) or (iliitsh), and the suffixed (-liik) is reduced to (li).

The old pronunciation (qg) must be retained for ng, thus (logg, logger) or (legger); there is no certain evidence for (loqq). The French nasal is in preference expressed by s. What the Frenchman wrote raison and pronounced (reesoq') is here written resours and called (resuun), as if the (q) were unknown. As the termination in girende has assumed the form (giving), we might conjecture the sound to be (giviq), because the form comes direct from (givin), as the Scotch and common people still say, but we must remember that giving also answers to the German Gebung, in which the g is significant.

We now come to h, which is also a difficulty. That initial A before a vowel had now become (H) as in German of the xIII th century, is very probable, because h was also written in Latin and French words, and is still spoken. Chaucer has occasionally elided the silent e in the French fashion before h, which was certainly an error [was freilich ein Missgriff war! shared by Orrmin, supra p. 490, and intermediate writers, who were free from French influence.] For the medial h, the dialect perceived its difference from (H'), and hence used the new combination gh, known in the old Flemish, where the soft (kh) has been developed from g. The ags. niht = (nikht) became night = (nikht), and similarly thurgh = (thurkh). (khleakhan) we have lawh, and laugh, both = (laakh); (seakh) gives sawh = (saakh) or seigh = (srekh). Before *l*, *n*, *r*, the ags. A has disappeared, but ags. (khbhiite) is here somewhat singularly written white, a transposition of hwite. Had h been silent it would have been omitted as in hl, hn, hr, but as it was different from an ordinary h before a vowel, this abnormal sign for (khbh), formed on the analogy of gh, came into use, and really signified an abbreviated heavy ghw. Hence (khbhiite) retained its Anglosaxon sound in Chaucer's time. [Rapp could not distinguish English w from (u), and hence to him wh was (Hu), the real meaning of wh thus escaped him. His theory is that A was always (kh) in the old Teutonic languages,

We have still to consider sk and ks.

The former was softened to (sjkr) in ags., and hence prepared the way for the simple (sh), and this may have nearly occurred by Chaucer's time, as he writes sch which bears the same relation to the French ch = (tsh), as the Italian sci to ci, s shewing the omission of the initial t. Some MSS. use ssh and even the present sh, the guttural being entirely forgotten. The ags. ks remains, but sk is still transposed into ks in the bad old way, as axe = (akse) for (aske).

For the vowels, Gesenius has come to conclusions, which are partly based on Grimm's Grammar, and partly due to his having been preoccupied with modern English, and have no firm foundation. The Englishmen of the present day have no more idea how to read their own old language, than the Frenchmen theirs. We Germans are less prejudiced in these matters, and can judge more freely. Two conditions are necessary for reading old English correctly-first, to read Anglosaxon correctly, whence the dialect arose; secondly, to read old French correctly, on whose orthography the old English was quite unmistakably modelled. [The complete catena of old English writers now known, renders this assertion more than doubtful. See suprà

p. 588, n. 2, and p. 640.]

We must presume that the old French a was pure (a). The ags. a, was lower=(a). The English orthography paid no attention to this difference, and hence spoke French a as (a). There can be no doubt of this, if we observe that this a was lengthened into au or aw, the value of which from a French point of view was (AA), as it still is in English, as straunge, demaunde, tyraunt, graunte, haunte. In all these cases the Englishman endeavours to imitate French nasality by the combination (AAn). [This au for a only occurs before n, see suprà p. 143, and infrà Chap. VIII., § 3].

The old short vowel a hence remains (a) as in ags, thus (makjan) is in the oldest documents (makie, maki) and afterwards (make), where the (a) need no more be prolonged by the accent than in the German machen (makhen), and we may read (makke). [But see Orrmin's makenn, p. 492].

The most important point is that the ags. false diphthongs are again overcome; instead of (zalle) we have the older form (alle), instead of (skearp) we find (sharpe) etc. The nasal (an), as in ags., is disposed to fall into (on), as (hond, lond, droqk, begonne), etc.

The greatest doubt might arise from

The greatest doubt might arise from the ags. a or rather (a) appearing as (a) without mutation; thus, ags. (theet, khbhæt, bhæter, smæl) again fall into (that, khbhæt, bhæter, smæl). The mutation is revoked—that means, the ags. mutation had prevailed in literature, but not with the whole mass of the people, and hence in the present popular formation might revert to the older sound, for it is undeniable that although the present Englishman says (dhæt) with a mutated a, he pronounces (muat, uaatər, smaal) what, water, small, without a mutate. In most cases the non-mutated form may be explained by a flexion, for if (dæg) in ags. gave the plural (dagas), we may understand how Chaucer writes at one time (dæ) day and at another (daa) daw for day,

Short e remains unchanged as (g) under the accent, when unaccented it had perhaps become (a). Even in ags. it interchanges with i, y, as (tshirtsh) or (tshertsh) church. The ags. eo is again overcome, for although forms like beo, beo b, still occur in the oldest monuments, e is the later form, so that (steorra) star again becomes (sterre), and (gzolu) yellow gives (jelbhe, jelu), (fzol) fell becomes (fzll, fill), etc. A short (z) sometimes rhymes with a long one in Chaucer, as (mzde, rezde) meadow, red. Such false rhymes are however found in German poetry of the xiii th century, and they are far from justifying us in introducing the modern long vowel into such words as (make, mzde), etc.

The old long vowel e is here (ee), as appears all the more certainly from its not being distinguished in writing from the short. [Rapp writes è è, but he usually pairs ê e, à è = (ee e, ee), the (ee) being doubtful, (ee, ee). This arises from German habits, but in reality in closed syllables (e) is more frequent than (e), if a distinction has to be made. It would perhaps have represented Rapp more correctly to have written (ee e, ee), but I considered myself bound to the other distribution, although it leads here to the absurdity of making (ee, e) a pair]. The quantity of the ags. must be retained, hence (seekan, keene) can only give (seeke, keen) seek, keen, and from

(shhate) we also obtain (soote), with omitted (e), compare Norse (seect)
sweet. [The careful notation of quantity by Orrmin points him out as a better authority for this later period.] Long (e) also replaces ags. e as (here, as, sleep, and the old long ée as (seeke, leefe leeve, deepe, tahese) seek, lief, deep, choose, and family the old long ée as (eek) from (sak), and similarly (greete, beene, takepe) great, bean, cheapen. These different (ee) rhyme together and have regularly become (ii) in modern Eng-lish. There is no doubt about short and long i could not have been a diphthong, because the French orthography had no suspicion of such a sound. Ags. y is sometimes rendered by m as fwire fire, which, however, already rhymes with (miire) and must therefore have sounded (fiire). The (yy) had become (ii) even in ags., so (bruud) becomes (briide), etc. Less of all can we suppose short i in (bhilde, tahilde, finde) wild, child, find, to be diphthongal, or even long, as the othography would have otherwise been quite different.

Short o may retain its natural sound (o), and often replaces ags. u, thus (anny) gives (sommer), and (khnut, fathor) give (not, forther) nut, further. In these cases the Englishman generally recurs to the mutate of (u), to be

Presently mentioned.

Long o in Chaucer unites two old long vowels, (AA) in (Hoome), sometimes (HAM), (goost from (gAASt), (whe) from (AAth) oath, (Hoote) from (AAth); and the old (oo) in (booke, looke, foote, soothe). Both (oo) rhyme ogether, and must have, therefore, losely resembled each other; they can carely have been the same, as they therefore, and must have the latter may save inclined to (u) and has become uite (u).

The sound of (u) is in the French shion constantly denoted by ou. [But supra p. 426, l. 3. Rapp is probley wrong in attributing the introduction to French influence.] French sion was written raisun by the Anglo-Norman, and resoun by Chaucer, which could have only sounded (resuun). A diphthong is impossible, as the name Carcasous Caucasus rhymes with hous, and resoun with toun. Hence the and must have been (mus, tuun) as in all German dialects of this date.

Hence we have (fluur) flower for the French (floeer). The real difficulty consists in determining the quantity of the vowel, as it is not shewn by the spelling. Position would require a short (u) in cases like (shulder, hund, stund, bunden) shoulder, old (skulder), hound, hour, bound; but the old (sookhte) must produce a (suukhte) sought; and cases like (brukhte, thukhte) brought, thought, are doubtful.

On the other hand the vowel written ss, must have been the mutate common to the French, Icelander, Dutchman, Swede. The true sound is therefore an intermediate, which may have fluctuated between (æ, u, y), (lyst, kyrs) desire, curse. These u generally derive from ags. u, not y. The use of this sound in the unaccented syllable is remarkable. The ags. (bathsan) has two forms of the participle (bathod, bathed). Hence the two forms in Chaucer. (bathyd) or rather (bathud) exactly as in Icelandic [where the u = (o), not (v), suprà p. 548], the second (bathid, bathed). Later English, however, could not fix this intermediate sound, and hence, forced by the mutations, gave the short u the colourless natural vowel (a), except before r where we still hear (e), [meaning, perhaps (a). This theoretical account does not seem to re-present the facts of the case.] The above value of short (u) in old English is proved by all French words having this orthography. Sometimes Chaucer endeavours to express long (yy) by ui, as fruit, where, however, we may suspect the French diphthong; but generally he writes nature for (natyyre) without symbolising the length. We should not be misled by the retention of the pure (u) in modern English for a few of these mutated u, as (full, putt, shudd, fruut). These anomalies establish no more against the clear rule than the few pure (a) of modern English prove anything against its ancient value.

The written diphthongs cause peculiar difficulties. The combinations as, ay, ei, ey, must have their French sound (EE), but as they often arise from (æg) there seems to have been an intermediate half-diphthongal or triphthongal (EEi); thus (dæge) gives (dæi) or (dee). From éage) we have the variants eye, ye, eighe, yghe, so that the sound varies as (eye, ii/e, iie,

zikhe, iikhe). Similarly (niikhe) and (Hiie) high, and (neekhe, niie) nigh. We have already considered au, av, to have been (AA). The ags. (lagu, lakh) law, gives lawe, which perhaps bordered on a triphthongal (lanue). In the same way we occasionally find (daaue) day, in two syllables, instead of the usual (dee), ags. (dæg, dægas), and from ags. (saabhl) comes saule (saale) and soule, which could have only been (suule). The medial ow = ou, that is, (uu), but before a vowel it might also border on a triphthong; thus lowh = (luukh) low, is also written lowe = (looue) ? Oughen = (uukhen), and also owen = (oouen), now own = (oon). Similarly growe may have varied between (gruue, grooue) and so These cases on with many others. give most room for doubt, and the dialect was probably unsettled. But the diphthong eu, ew, leaves no room for doubt; it cannot be French (ce) for heure hour is here (Hyyre) [probably a misprint for (nuure)], and for peuple we also find (peeple). On the other hand the French beauté, which was called (béautee, béotee) is here written beieté, which was clearly (beutee). Similarly German words, as knew, cannot have been anything but kneu). Similarly (neue) new. The French diphthong of as in vois

voice, was taken over unaltered, and also replaces romanic ui, which was too far removed from English feelings; we have seen fruit pass into (fryyt, fruut); ennuyer becomes (anoi) and destruire is written destruie, destrie, but had the same sound (destroi).

As regards the so-called mute e, it was undeniably historical in Chaucer and represented old inflections, yet it was, with equal certainty, in many cases merely mechanically imitated from the French. But we cannot scan Chaucer in the French fashion, without omitting or inserting the mute e at our pleasure, and in a critical edition of the poet, the spoken e only ought to be written. What was its sound when spoken? Certainly not (a) as in French, but a pure (e) with some inclination to (i). This is shewn by the rhyme (soothe, too thee) already cited, and many others, as clerkes, derk is; (dreed is, deedes) etc. At present Englishmen pronounce this final e in the same way as i, and in general e, i present as natural a euphonicum as the French (a).

application of the results of Chapter IV. to the exhibition pronunciation of the prologue, has been a work of great ty, and numerous cases of hesitation occurred, where analogy ould decide. The passages have been studied carefully, and r to judge of the effect, I have endeavoured to familiarise with the conception of the pronunciation by continually The examination of older pronunciation in Chap. : aloud. on the whole confirmed the view taken, and I feel conle confidence in recommending Early English scholars to our to read some passages for themselves, and not to prehe effect, as many from old habits may feel inclined. ifficulty may be felt in acquiring the facility of utterance ry for judging of the effect of this system of pronunciation, it t be out of place to give a few hints for practice in reading, z how those who find a difficulty in reproducing the precise which are indicated, may approximate to them sufficiently purpose. These instructions correspond to those which I iven in the introduction to the second edition of Mr. R. 3 Chaucer.

roman vowels (a, e, o, u) must be pronounced as in Italian,

with the broad or open e, o, not the narrow or close sounds. They are practically the same as the short vowels in German, or the French short a, è, o, ou. The (a) is never our common English a in fat, that is (æ), but is much broader, as in the provinces, though Londoners will probably say (æ). For (o) few will perhaps use any sound but the familiar (o). The (u) also may be pronounced as (u), that is, u in bull or oo in foot. The long vowels are (aa, ee, oo, uu) and represent the same sounds prolonged, but if any English reader finds a difficulty in pronouncing the broad and long (ee, oo) as in Italian, Spanish, Welsh, and before r in the modern English mare, more, he may take the easier close sounds (ee, oo) as in male, mole. The short (i) is the English short i in pit, and will occasion no difficulty. But the long (ii) being unusual, if it cannot be appreciated by help of the directions on p. 106, may be pronounced as (ii), that is as ee in feet. The vowel (yy), which only occurs long, is the long French u, or long German The final (-e) should be pronounced shortly and indistinctly, like the German final -e, or our final a in China, idea, (suprà p. 119, note, col. 2), and inflectional final -on should sound as we now pronounce -en in science, patient. It would probably have been more correct to write (v) in these places, but there is no authority for any other but an (e) sound, see p. 318.

For the diphthongs, (ai) represents the German ai, French, at Italian ahi, Welsh ai, the usual sound of English aye, when it is distinguished from eye, but readers may confound it with that sound without inconvenience. The diphthong (au) represents the German au, and bears the same relation to the English ow in now, as the German ai to English eye, but readers may without inconvenience use the sound of English ow in now. Many English speakers habitually say (ai, au) for (ei, eu) in eye, now. The diphthong (ui) is the Italian ui in lui, the French oui nearly, or more exactly the French oui taking care to accent the first element, and not to confound the sound with the English we.

The aspirate is always represented by (H H), never by (h), which is only used to modify preceding letters.

(J J) must be pronounced as German j in ja, or English y in yaa,

yawn, and not as English j in just.

The letters (b d f g k l m n p r s t v w z) have their ordinary English meanings, but it should be remembered that (g) is always as in gay, go, get, never as in gem; that (r) is always trilled with the tip of the tongue as in ray, roe, and never pronounced as in air, ear, oar; and also that (s) is always the hiss in hiss and never like a (z) as in his, or like (sh). The letter (q) has altogether a new meaning, that of ng in sing, singer, but ng in finger is (qg).

text is generally used in the South of England, but this pronunciation is perhaps unknown in Scotland.

¹ This word is variously pronounced, and some persons rhyme it with nay. In taking votes at a public meeting the sound intended to be conveyed in the

(Th, dh) represent the sounds in thin, then, the modern Greek θ δ . (Sh, zh) are the sounds in mesh measure, or pish, vision, the

Fr. ch, j.

(Kh, gh) are the usual German ch in ach and g in Tage. But careful speakers will observe that the Germans have three sounds of ch as in ich, ach, auch, and these are distinguished as (kh, kh, kwh); and the similar varieties (gh, gh, gwh) are sometimes found. The reader who feels it difficult to distinguish these three sounds, may content himself with saying (kh, gh) or even (n'). The (kwh) when initial is the Scotch quh, Welsh chw, and may be called (khw-) without inconvenience. Final (gwh) differs little from (wh) as truly pronounced in when, what, which should, if possible, be carefully distinguished from (w). As however (wh) is almost unknown to speakers in the south of England, they may approximate to it, when initial, by saying (u+i).

The italic (w) is also used in the combination (kw) which has precisely the sound of qu in queen, and in (rw) which may be pro-

nounced as (rw), without inconvenience.

(Tsh, dzh) are the consonantal diphthongs in chest jest, or such

fadge.

The hyphen (-) indicates that the words or letters between which it is placed, are only separated for the convenience of the reader, but are really run on to each other in speech. Hence it frequently stands for an omitted letter (p. 10), and is frequently used for an omitted initial (H), in those positions where the constant elision of a preceding final - θ shews that it could not have been pronounced (p. 314).

These are all the signs which occur in the prologue, except the accent point (·), which indicates the principal stress. Every syllable of a word is sometimes followed by (·), as (naa tyyr·), in order to warn the reader not to slur over or place a predominant stress on either syllable. For the same reason long vowels are often

written in unaccented syllables.

If the reader will bear these directions in mind and remember to pronounce with a general broad tone, rather Germanesque or provincial, he will have no difficulty in reading out the following prologue, and when he has attained facility in reading for himself, or has an opportunity of hearing others read in this way, he will be able to judge of the result, but not before.

The name of the poet, Geoffrey Chaucer, may be called (Dzhefrai Tshau seer), but the first name may also have been called (Dzhefree), see supra p. 462. The evenness of stress seems guaranteed by Gower's even stress on his own name (Guu eer), but he uses Chaucer only with the accent on the first syllable, just as Chaucer

also accents Gower only on the first.

33 foorward, promise. No MS. marks the length of the vowel in MS. marks the length of the vowel in foor, but as the word came from foreweard, it would, according to the usual analogy, evidenced by the modern pronunciation of fore, have become lengthened, and the long vowel, after the extinction of the e, becomes useful in distinguishing the word from for ward, onward, for to ryse is the reading of the six MSS.

36 eer, E. He. L. read er, the others or; in either case the vowel was probably long as in modern ere.

Saint Loy. Both the last suggestions make a lame line by throwing the accent on by, unless we make by saynt Loy, a quotation of the Nonne's cath, which is not probable. The Ha. has n as, the Six MSS. have was simply. For oth e, which is a very doubtful form, Prof. Child refers to 1141, where Ha. reads: This was thyn othe and myn eek certayn, which would require the exceptional preser-

vation of the open vowel in othe, but all the Six MSS. read: This was thyn ooth, and myn also certeyn, only P., L. write a superfluous e as othe.

named being separated by or, have been referred to as it in the preceding line. I therefore conjecturally insert it and change hem to him, though I cannot bring other instances of the use of forby Asm. The reading of the six MSS. gets out of the difficulty by a clumsy repetition of old, and by leaving a sentence incomplete thus: "the rule... because that it was old... this monk

let old things pass," which must be

179 recchelees, so the six MSS. It probably stands for reghel-lees, without his rule, which not being a usual phrase required the explanation of v. 181, and the Ha. cloysterles was only a gloss which crept into the text out of v. 181, and renders that line a useless repetition.

 $223\,$ ye v e, all MSS. except L. have the final e.

	For unto a por' order for to yeve Is signe that a man is weel yechreve. For if he yaaf, he dorste mak' avaiont,	
iii	He wiste that a man was repentaunt. For many a man so hard is of his herte, He may not wepe though him sore smerte. Theerfor' insted' of weping' and preyers,	228
vi	Men moote yeve silver to the pore freres. His tipet was ay farsed ful of knyfes And pinnes, for to yeve fayre wyfes. And certaynly he hadd' a mery note.	232
	Weel coud' he sing' and pleyen on a rote. Of yedding's he baar utterly the prys. His necke whyt was as the flour-de-lys. Theerto he strong was as a chaumpioun.	236
	He knew the tavern's weel in ev'ry toun, And ev'rich ostelleer or gay tapsteer, Better than a lasser or a beggeer, For unto swich a worthy man as he	240
	Accorded not, as by his facults, To have with sike lazer's acqueentaunce. It is not honest, it may not avaunce, For to delen with noon swich porayle,	244
	But al with rich' and seller's of vitayle. And ov'ral, ther as profit schuld' aryse, Curteys he was, and lowly of servyse. Ther was no man no wheer so vertuous.	248
	He was the beste beggeer in his hous, For thowgh a widwe hadde nowght a sho, So plesaunt was his IN PRINCIPIO,	252
	Yet wold' he haan a ferthing er he wente. His pourchase was weel better that his rente. And rag' he coud' and pleyen as a whelp, In lovedayes coud' he mochel help'.	256
vi	For theer was he not lyk' a cloystereer, With a threedbare cop' as a pore scoleer, But he was lyk' a mayster or a pope. Of doubel worsted was his semicope,	260

232 All MSS. agree in making this a line of six measures, and it seems to portray the whining beggary of the cry, suprà p. 649.

235 note, throte Ca.

240 tavern's weel, the six MSS. have this order. Ha. wel the tavernes.

247 non E. He. Ca., the others omit it.

249 as omitted in Ha. Ca., found in the rest.

252 After this line He. alone inserts the couplet-

And yaf a certeyn ferme, for the graunte

Noon of his bretheren, cam ther in

his haunte.

253 So all the six MSS., meaning, although a widow had next to nothing in the world, yet so pleasant was his introductory lesson In principio erst

But nee was link a mais ter or a poorpe.	
Of duub'l worsted was is semikoope,	

The Hand of Chaucer, p. 93) that he would coax a trifle out of her. The Ha. reads but oo schoo, on which see Temp. Pref. p. 94. That we are not to take the words literally, but that schoo was marrely used as a representative of something utterly worthless, which was convenient for the rhyme, just as pulled home 177, or oyster 182, and the usual deen, stress, modern fig. farthing, etc., is shown by its use in the Prologe to

the Wyf of Bathe, 6288 as pointed out by Mr. Aldis Wright,—

The clerk whan he is old, and may nought do Of Venus werkis, is not worth a scho. 256 weel, so the six MSS., omitted in Ha.

260 So all MSS. except Ca. which reads, as is a scholer, against rhythm. Compare v. 232. See also Temp. Pref. to Six-Text Ed. of Chaucer, p. 100.

And rounded as a bell' out of the presse.

	Somwhat he lipsed, for his wantounnesse, To mak' his Englisch swet' upon his tonge; And in his harping', whan that he hadd' songe, His eyghen twinkled in his heed aright. As doon the sterres in the frosty night. This worthy limitour was call'd Huberd.	264 268
	11. THE MARCHAWNT.	
 iii	A Marchaunt was ther with a forked berd, In motlee and heygh on hors he sat, Upon his heed a Flaundrisch bever hat; His botes clapsed fayr' and fetisly. His resouns spaak he ful solemnely, Souning' alwey th' encress of his winninge. He wolde the se wer' kept for any thinge Betwixe Middeburgh and Orewelle. Weel coud' he in eschaunge scheldes selle, This worthy man ful weel his wit bisette; Ther wiste no wight that he was in dette, So staatly was he of his governaunce, With his bargayn's, and with his chovisaunce. For sooth' he was a worthy man withalle, But sooth to sayn, I n'oot hou men him calle.	272 276 280 284
	12. THE CLERK.	
•••	A Clerk ther was of Oxenfoord' also, That unto logik hadde long' ygo. So lene was his hors as is a rake, And he n'as not right fat, I undertake, But loked' holw', and theerto soberly. Ful threedbar' was his ov'rest courtepy,	288
iii —	For he hadd' geten him yet no benefyce, Ne was so worldly for to hav' offyce. For him was lever hav' at his bedd's heed Twenty bokes, clad in blak and reed, Of Aristot'l, and his philosophye,	292
	Than robes rich' or fith'l or gay sawtrye.	296

264 his, so the six MSS., omitted in Ha. which therefore required lipsede for the metre.

271 motlee, so all but Ha. L. which have motteley. The word is obscure, and may be Welch mudliw, (myd liu) of a changing colour.

274 All MSS. read he spaak,

but the order of the words is conjecturally altered on account of the rhythm.

275 so un appears in ags. as sow, (Ettmüller 667) but only as the substantive song. As the word has here the form of one derived from the French it is here printed in italics and marked as French.

And ruunded as a bel uut of dhe prese.	
Sum what He lip sed, for is wan tunnese,	264
To maak -is Eq lish sweet upon dhe tuq e;	
And in -is Har piq, whan dhat Hee -ad suq'e,	
His aikh en twick led in -is need arikht.	
As doon dhe ster es in dhe frost ii nikht.	268
Dhis wurdh ii lii mii tuur was kald Hyy berd.	

11. Dhe Martshaunt.

A Mar-tshaunt was dher with a forked berd, In motlee and naikh on nors -e sat,	
Upon -is need a Flaun drish beev er nat;	272
His boot es klaps ed fair and fee tislii.	
His ree suuns spaak -e ful soolem nelii,	
Suun iq alwai dh- enkrees of His win iq e.	
He wold e dhe see wer kept for an ii thiq e	276
Betwiks e Mideburkh and Oorewele.	
Weel kuud -e in es tshaundzh e sheld es sel e.	
Dhis wurdh is man ful weel -is wit biset e;	
Dher wist e noo wikht dhat -e was in det e,	280
Soo staat·lii was nee of -is guu vernauns e,	
With His bargainz and with is tshee vissuuse.	
For sooth -e was a wurdh ii man withal e,	
But sooth to sain, Ii noot Huu man -im kale.	284

12. Dhe Klerk.

A Klerk dher was of Ok'senfoord al'soo;
Dhat un'to lodzh'ik had'e loq igoo.
So leen'e was -is hors as is a raak'e,
And hee n--as not rikht fat, Ii undertaak'e.
But look'ed hol'w- and dheer too soo'berlii.
Ful threed baar was -is ov'rest kur'tepii,
For hee -ad get'en -im jet noo benefiis'e,
Ne was soo wurdl'ii for to haav ofiis'e.

292
For him was leev'er haav at his bedz heed
Twen'tii book'es, klad in blak and reed,
Of Aristot'l-, and his fii'loo'soo'fii'e,
Dhan roob'es ritsh or fidh'l- or gai sautrii'e.

281 staatly, so Co., the rest have estaatly, and Ha. alone omits his, against the metre. If we read: so estaatly, the first measure will be trissyllabic.

288 n'as, so E. Ca. Co., but was Ha. He. P. and L.

291 geten him yet no, E.

He. Ca.; yit geten him no P., nought geten him yet a Ha., geten him no, Co. L.

292 worldly E. He. Co., wordely Ca., wordly P., werdly L., Ne was not worthy to haven an office Ha.

296 gay, so all MSS. except Ha. which omits it.

iii	But albe that he was a philosopher, Yet hadd' he but a lytel gold in cofer, But al that he might' of his frendes hente, On bokes and on lerning' he it spente, And bisily gan for the sowles preye Of hem, that yaaf him wherwith to scoleye. Of studie tok he moost cur' and moost heed. Not oo word spaak he more than was need; And that was seyd in form and reverence, And schort and quik, and ful of heygh sentence. Souning' in moral vertu was his speche, And gladly wold' he lern' and gladly teche.	300 304 308
	13. THE SERGEAWNT OF LAWE.	
	A Sergeaunt of Lawe, waar and wys, That often hadde ben at the parvys, Ther was also, ful rich' of excellence. Disputs he was and of most recovered.	910
	Discreet he was, and of greet reverence. He semed' swich, his wordes wer' so wyse. Justyo' he was ful often in assyse By patent, and by pleyn commissioun,	312
	For his scienc', and for his heygh renoun; Of fees and robes hadd' he many oon. So greet a pourchasour was no wheer noon.	316
iii iii	Al was fee simpel to him in effect, His pourchasing ne mighte not ben infect. No wheer so bisy a man as he ther n'as,	320
iii	And yit he semed' bisier than he was. In terms hadd' he caas and domes alle,	
iii	That fro the tym' of king William wer' falle. Theerto he coud' ondyt' and mak' a thing.	324
	Ther coude no wight pinch' at his writing'. And ev'ry statut coud' he pleyn by rote. He rood but hoomly in a medlee cote, Gird with a ceynt of silk with barres smale;	328

297 So the six MSS., the Ha. is unmetrical. The long vowels in p hilosopher, gold, coffer, are very doubtful, and it is perhaps more probable that short vowels would be correct.

Of his array tell' I no lenger tale.

298 "a" is only found in Co. If it is omitted, the first metre becomes defective.

303 moost heed, so the six MSS.; heed Ha.

305 So all the six MSS. (H. has spoke), but Ha. has the entirely dif-

ferent line: Al that he spak it was of heye prudence. The whole of the clerk's character is defective in Ha. In "Cassell's Magazine" for May, 1869, p. 479, col. 1, there occurs the following paragraph: "The following pithy sketch of Oxford life half a dozen centuries ago is from the pen of Wycliffe:

—The scholar is famed for his logic; Aristotle is his daily bread, but otherwise his rations are slender enough. The horse he rides is as lean as is a rake, and the rider is no better off. His cheek is hollow, and his coat

But al bee dhat -e wer a fii loo soof er,

Jet had -e but a lii t'l goold in koof er,

And al dhat hee mikht of -is frend es hent e,

And biz ilii gan for dhe sooul es prai e

Of hem dhat jaaf -im wheer with to skolai e.

Of stud ie took -e moost kyyr and moost heed.

Not oo word spaak -e moor e dhan was need;

And dhat was said in form and ree verens e,

And short and kwik and ful of haikh sentens e.

Suu niq in mooraal vertyy was -is speetsh e,

And glad lii wold -e lern, and glad lii teetsh e.

308

13. Dhe Serdzheeaunt of Laue.

A Ser dzheeaunt of Lauc, waar and wiis, Dhat of ten Had e been at dhe par viis, Dher was alsoo, ful ritsh of ek-selense. Diskreet -e was and of greet rec verens e. 312 He seem ed switsh, -is word es wer soo wiis e. Dzhyystiis -e was ful often in asiise Bii paa tent, and bii plain komis iuun, For His sii ens, and for -is Haikh renuun: 316 Of feez and roob es Had -e man ii oon. So greet a puur tshaa suur was noo wheer noon. Al was fee sim p'l too -im in efekt; His puur tshaas iq ne mikht e not been infekt. 320 Noo wheer soo biz'i a man as nee dher n--as, And Jit -e seem ed biz ier dhan -e was. In term'es Had -e kaas and doom'es al'e, Dhat froo dhe tiim of kiq Wiliaam wer fale. 324 Dheertoo He kuud endiit and maak a thiq. Dher kuud e noo wikht pintsh at His rwiit iq. And ev rii staa tyyt kuud -e plain bii root e. He rood but Hoom live in a med-lee koote, 328 Gird with a saint of silk with bares smaale; Of His arai tel Ii noo leq ger taal e.

Chreadbare. His bedroom is his study. Over his bed's head are some twenty volumes in black and red. Whatever coin he gets goes for books, and those who help him to coin will certainly have the advantage of his prayers for the good of their sculs while they live, or their repose when they are dead. His words are few, but full of meaning. His highest thought of life is of learning and teaching. This is obviously a modern English translation of the present passage. Is there anything like it in Wycliffe?

306 heygh, so the six MSS., gret Ha. apparently because of heye in the preceding line of that recension.

307 vertu, so the six MSS. manere Ha.

310 at the, so all MSS. except Ha. and P., see suprà p. 331, note.

320 infect, so all six MSS., suspecte Ha.

327 pleyn, Fr. ploin, fully compare v. 337.

14. THE FRANKELEYN.

	A Frankeleyn was in his companye;	
	Whyt was his berd, as is the dayesye.	332
	Of his complexioun he was sangwyn.	
	Weel lov'd' he by the morrw' a sop in wyn'.	
	To lyven in delyt' was e'er his wone,	
	For he was Epicurus owne sone,	336
	That heeld opinioun that plays delyt	
	Was verrayly felicite perfyt.	
	An housholdeer, and that a greet was he;	
	Saynt Juliaan he was in his ountree.	340
iii	His breed, his ale, was alwey after oon;	
	A bettr' envyned man was no wheer noon.	
iii	Withoute bake mete was ne'er his hous	
	Of fisch' and flesch', and that so plentevous	344
	It snewed in his hous of met' and drinke	
	Of alle deyntees that men coude thinke.	
	After the sondry sesouns of the yeer',	
	So chawnged' he his met' and his soupeer.	3 4 8
iii	Ful many a fat partrich hadd' he in moue,	
iii	And many a breem and many a luc' in steue.	
	Woo was his cook, but if his sauce were	
	Poynawnt and scharp, and redy al his gere.	352
	His tabel dormawnt in his hall' alwey	
	Stood redy cover'd al the longe day.	
	At sessiouns theer was he lord and syre.	
	Ful ofte tym' he was knight of the schyre.	356
	An anlas and a gipseer al of silk	
	Heng at his girdel, whyt as morne milk.	
	A shyrrcev hadd' he been, and a countour.	
	Was no wheer such a worthy vavasour.	360

p. 363. The Six MSS. render many of the examples there cited suspicious, see note on v. 120 for v. 1141. In v. 1324, He. reads moot, and the line may be: Withouten dout' it mote stonden so. For v. 1337 all six MSS. read: And let him in his prisoun stille dwelle. For v. 2286 all six MSS. dar not telle. For v. 2385, E. He. Ca. Co. L. read: For thilke peyn' and thilke hote fyr. In v. 2714, E. He. Ca. have: Somm' hadden salves and somm' hadden charmes. For v. 1766.

R. He. Ca. Co. L. read: The trespes of hem both and eek the cause. For v. 4377 (in which read sight for night) E. He. Pe. L. practically agree with Ha., but it would be easy to conjecture: Til that he hadd al thilke sight yeeyn. For v. 4405, E. reads rotic in place of rote, but He. Pc. L. agree with Ha. The form rotic, which is more ancient, see Stratmann's Dict. p. 467, would save the open vowel. It is possible, therefore, that the other examples of open e preserved by casura in Chaucer, would disappear if more

MSS. were consulted. Again, in the first line cited from Gower, i. 143, we see in the example below that two MSS. read: he wept' and with ful worful teres. The practice is therefore doubtful. But final s often remains before he at the end of a line in Gower, suprà, p. 361, art. 76, s. Hence the division in the text is justified. There is no variety in the readings of the MSS.

429 Supra p. 341, l. 2 and 13, I treated this as a full line, thinking that the e in olde was to be preserved. Further consideration induces me to mark the line as having an imperfect

first measure, and to elide the e in the regular way, on the principle that exceptional usages should not be unnecessarily assumed.

23. THE WYF OF BATHE.

	A good Wyf was ther of bisyde Bathe, But sche was somdeel deef, and that was skathe. Of cloothmaking' sche hadde swich an haunt, Sche passed' hem of Ypres and of Gaunt. In al the parisch' wyf ne was ther noon, That to th' offring' bifoorn her schulde goon,	448

24. THE PERSOUN.

A good man was ther of religioun,
And was a pore Persoun of a toun;
But rich' he was of holy thought and werk',
He was also a lerned man, a clerk,
That Cristes gospel gladly wolde preche;
His parischens devoutly wold' he teche.

452 was out, so the six MSS., was thanne out Ha.

453 ful fyne wer', so the six MSS., weren ful fyne Ha.

454 weygheden, weyghede Ha. weyeden E. He. Co. P., weyedyn Ca. weiden L., hence all but Ha. give the plural en.

Gaat-tooth ed was she, sooth lift for to saire. 468 Upon an am bleer ees elii she sat, Iwim pled weel, and on -iir need an nat As brood as is a buk-leer or a tardzh e; A foot mantel about -iir Hip es lardzh e, 472 And on -iir feet a pair of spuures sharpe. In fel aushiip weel kuud she laugwh and karp e. Of rem ediz of luuve she kneu partshaunse, For shee kuud of dhat art dhe oold e dauns e. 476

24. Dhe Persuun.

A good man was dher of relii dzhiuun;
And was a poor e Per suun of a tuun;
But ritsh -e was of nool ii thoukwht and werk,
He was alsoo a lern ed man, a klerk,
Dhat Krist es gosp el glad lii wold e preetsh e;
His par ishenz devuut lii wold -e teetsh e.

465, 466. Boloyne, Coloyne. The MSS. are very uncertain in their orthography. Boloyne, Coloyne, appear in Ha. He. Ca., and Boloyne in P. L., but we find Boloigne, Coloigne in E. Co., Coloigne in P., and Coloyngne in L. The

pronunciation assigned is quite conjectural. The following pronunciations of the termination are also possible: (-oon-ze, -oon-e, -uin-e, uiq-ne) The modern Cockneyism (Buloin-, Kələin-) points to (-uin-e). See also note on v. 634.

	Benygn' he was and wonder dylygent, And in adversite ful pacient; And such he was ypreved ofte sythes. Ful looth wer' him to curse for his tythes, But rather wold' he yeven out of doute, Unto his pore parischens aboute, Of his offring', and eek of his substaunce. He coud' in lytel thing haan suffisaunce.	484 488
iii	Wyd was his parisch, and houses fer asonder, But he ne lafte not for reyn ne thonder, In sikness' nor in meschief' to visyte The ferrest in his parisch', moch' and lyte,	492
	Upon his feet, and in his hond a staaf. This nob'l ensampel to his scheep he yaaf, That first he wrowght', and after that he tawghte. Out of the gospel he tho wordes cawghte,	496
	And this figur' he added' eek therto, That if goold ruste, what schuld' yren do? For if a preest be foul, on whoom we truste,	500
	No wonder is a lewed man to ruste; And scham' it is, if a preest take kep', A schyten schepperd and a clene scheep; Weel owght' a preest ensampel for to yive	504
iii aï	By his cleenness', hou that his scheep schuld' live. He sette not his benefyce to hyre, And left' his scheep encomb'red in the myre, And ran to London', unto saynt Powles,	508
iii +	To seken him a chawnterye for sowles, Or with a bretherheed to been withhoolde; But dwelt' at hoom, and kepte weel his foolde, So that the wolf ne mad' it not miscarye.	512
+11	i He was a schepperd, and not a mercenarye; And thowgh he holy wer' and vertuous, He was to sinful man nowght dispitous, Ne of his speche daungerous ne dygne, But in his teching' discreet and benygne.	516

493 meschief, so all but Ca., which reads myschif, and L. which has meschef. The old French forms, according to Roquefort, are meschef, meschief, meschies, meschiez, mescief, mescies.

499 eek E. He. Co. P., yit Ha., omitted in Ca., L. has eke he hadded. Ca. reads addede, but no particular value is attachable to its final e's.

503 So all six MSS., if that Ha. in which case tak' must be read,

but the omission of the subjunctive e is harsh. See the same rhyme and phrase in the imperative and hence tak not take, 6014, 13766. Only Ca., which is generally profuse in final e, reads kep schep, in accordance with ags. analogy.

504 It is a curious example of the different feeling attached to words of the same original meaning, that schyten is banished from polite society, and dirty (ags. dritan cacare) is used without hesitation.

Beniin -e was and wund er diiliidzhent,	
And in adversitee ful paasient,	484
And sutsh -e was ipreeved ofte siidhes.

He was to sin ful man nouk wht dis pir tuus,	516
Nee of -is speetsh'e daun dzheruus' ne diin'e,	
But in -is teetshiq diskreet and benine.	

thus seynte, Ha. and Co. add an e, thus seynte for the metre, the other five MSS. have no e, and the grammatical construction forbids its use. Tyrwhitt, to fill up the number of syllables, rather than the metre, (for he plays havoc with the accentual rhythm which commentators seem to have hitherto much neglected, but which Chaucer's ear must have appreciated,) changes the first to into unto, thus: And ran unto London, unto Seint Poules, but this is not sanctioned by any MS. The solution

of the difficulty is to be found in the occasional dissyllabic use of saynt, see note on v. 120. Powles, see suprapp. 145, 148. Mr. Gibbs mentions that he knows (Poolz) as an existent Londoner's pronunciation in the phrase as old as Powl's, see suprapp. 266 for Chaucer's usage.

512 folde, the final e is exceptional, suprà p. 384, col. 1.

514 and not a, so all the six MSS., and no Ha.

629 or Co. P. L.; this is more rhythmical than ne Ha. E. He. Ca., which would introduce a very inharmonious triesyllabic measure.

634 oynons Ha. E. He. Co., onyons L., onyounnys Ca., oynyouns P. The pronunciation (un Juunz) is, of course, quite conjectural, and moulded on the modern sound, though the more common oynons might lead to (uin uns), which seems hardly probable. Compare the modern vulgar (iq 'nz) and note on v. 465.

TO HER ME WILL WILL OF HOOD DI- CHIECO PROPER C.	. 00

Com bs me! was probably the name of a song, like that in v. 672, or the modern "Kiss me quick, and go, my love." It is also probable that Absolon's speech contained allusions to it, and that it was very well known at the time.

677 ounces, so all six MSS., unces Ha., which probably meant the same thing, suprà p. 304, and not inches.

679 colpoun's, I have adopted a systematic spelling, culpons Ha. P., colpons E. He., culpones

L., culpounnys Ca., colpouss ? Co., modern French coupons.

687 brerdful, the MSS. have all an unintelligible bret ful or bretful, probably a corruption by the scribes of Orrmin's brerdful = brimful; breird, brerd are found in Scotch, see Jamieson.

697 So all the MSS. Either saynt is a dissyllable, see note to v. 120, or the line has a defective first measure, to which the extremely unaccented nature of that is opposed.

Weel coud' he reed' a lessoum or a storie, But altherbest he sang an offertorie; For weel he wiste, whan that song was songe, He moste prech', and weel affyl' his tonge, To winne silver, as he right weel coude; 712 Theerfoor' he sang so mery' and so loude.

as enerich a word E., apparently to avoid a defective first measure.

738 a n o ther. I have throughout pronounced other as (udh'er), because of the alternative orthography outher, supra p. 267. This rhyme, however, shews that there must have also been a sound (oodh'er), which is historically

more correct. Orrmin writes oper for the adjective, and both opers and oper for the conjunction. That distinction has been carried out in the pronunciation of the Proclamation of Henry III., supra pp. 501-3-5.

744 not set folk, so all the six MSS., folk nat set Ha.

THE HOOSTE AND HIS MERTH.

	THE HOUSTE AND HIS MERTH.

756 lacked' him, this is conjectural; lakkede he Ha., him lackede the six MSS. variously spelled, in which case the final e must be pronounced, which is so unusual that I have preferred adopting the order of Ha, and the construction of the other MSS. 759 amonges E. He. Co.
764 I ne sawgh not, this is
a composite reading; I ne saugh
Ha., I sawgh not the other MSS.
variously spelled. The Ha. has therefore a trissyllabic first measure, which
is unusual and doubtful; to write both ne and not introduces an Alexandrine.

We might read the Ha. I ne sawgh this yeer, as an Alexandrine with a defective first measure. Perhaps I is a mistake, and ne sawgh this yeer, or this yeer sawgh not, may be correct, but there is no authority for it. Tyrwhitt reads: I saw not

In correcting the proofs of this text and conjectured pronunciation of Chaucer's Prologue I have had the great advantage of Mr. Henry Nicol's assistance, and to his accuracy of eye and judgment is due a much greater amount of correctness and consistency than could have been expected in so difficult a proof. Owing to suggestions made by Mr. Nicol, I have reconsidered several indications of French origin. One of the most remarkable is Powles v. 509,

1 Some trifling errors escaped observation till the sheets had been printed off, which the reader will have no difficulty in correcting, such as e, o, i for ee, oo, y, etc. The following are more important. Read in Text, v. 15 specially, v. 69 poort', v. 123 entuned, v. 152 streyt, v. 208 Frere, v. 260 pore, v. 289 soberly, v. 365 fresch, v. 569 vytayle, v. 570 tayle, v. 599 governing, v. 601 age. Read in the Pronunciation, v. 14 sundrii, v. 23 kum, v, 35 whills, v. 48 ferre, v. 53

Abuven, v. 66 Ajain, v. 71 al, v. 72 dzhent'l, v. 107 fedhres, v. 144 sakeh, v. 181, Dhis, v. 210 kan, v. 241 evriitsh, v. 265 His tuqe, v. 284 men, v. 292 world'lii, v. 334 bii dhe morw, v. 414 grund'ed, v. 424 juaf. Read in the Footnotes, on v. 60, l. 3 nob'l, on v. 120, l. 1 saynt, on v. 120, last line but three, "all the six MSS. except L.", and add at the end of the note "and L. omits also," on v. 247, l. 1 noon, on v. 305, l. 1 He, on v. 512, l. 1, foold e.

his tale anoon, and seyde MSS. in various spellings. as ye may heere, the other

which seemed to have a French pronunciation, but which ought perhaps to be marked Pow'les, the form Powel appearing in v. 13938, suprà p. 266, a direct derivative from Orrmin's Pawell with a long a. The alterations thus admitted affect the calculation on p. 651, which was made from the MS. As now printed (making the corrections just mentioned), the numbers are as follows:—

Lines containing no French word . . 286, per cent. 33.3 only one 359, 41.7 " 179, two French words 20.9 ,, " 29, three " 3.2 ,, . . " ,, 0.5 four " " ,, " 0.1 Lines in Prologue 858 100.0

These numbers are not sensibly different from the former. The number of Trissyllabic measures after correction appears as 76, the numbers in the six classes on p. 648 being respectively 25, 6, 3, 4, 29, 9. The number of lines with defective first measures, p. 649, remains 13, as before. The number of lines with two superfluous syllables, p. 649, is now 8, vv. 709, 710, having been added.

§ 2. Gower.

Johan Gower, died, a very old man, between 15 August and 24 October 1408, having been blind since 1400, the year of Chaucer's death. His three principal works are Speculum Meditantis, written in French, which is entirely lost; Vox Clamantis, in Latin, still preserved; and Confessio Amantis, in English, of which there are several fine MSS., and which was printed by Caxton in 1483. In this edition Caxton calls him: "Johan Gower squyer borne in Walys in the tyme of kyng richard the second." The district of Gowerland in S. W. Glamorganshire, between Swansea bay and Burry river, a peninsula, with broken limestone coast, full of caves, and deriving its name from the Welsh gwyr = (guu'yr) oblique, crooked, traditionally claims to be his birth place. Now Gower's own pronunciation of his name results from two couplets, in which it is made to rhyme with power and reposer. The first passage, according to the MS. of the Society of Antiquaries, is

Sche axeb me what was my name Madame I feyde Johan Gower. Now Johan quod fche in my power, Thou muste as of bi loue stonde. iii 3531

The other will be found below, pp. 738-9. The sound was therefore (Guu'eer'), which favours the Welsh theory. The modern form of the name is therefore (Geu'eı), and Gowerland is now called

(Gou exlænd) in English.

But the correctness of this Welsh derivation has been disputed. Leland had heard that he was of the family of the Gowers of Stitenham in Yorkshire, ancestors of the present Duke of Sutherland. The Duke has politely informed me that the family and traditional pronunciation of his patronymic Gower is a dissyllable rhyming to mower, grower, that is (Goo'ex). Now this sound could not be the descendant of (Guu'eer'), and hence this pronunciation is a presumption against the connection of the two families, strengthening the argument derived from the difference of the coats of arms.²

He was certainly at one time in friendly relations with Chaucer,

who, in his Troylus and Cryseyde, writes :-

O moral Gower, this boke I directe
To the, and to the philosophical Strode,
To vouchensauf, ther nede is, to correcte,
Of youre benignites and zeles goods.

5.77

And Gower, in some manuscripts, makes Venus send a message to Chaucer, as her disciple and poet, which is printed as an example below, pp. 738-9.

The text of Gower has not yet been printed from the manuscripts,

¹ These references throughout are to Pauli's edition, as explained suprà, p.

² For other particulars of the life of Gower, derived from legal papers, shewing that he was possessed of land in Kent, see the life prefixed to Pauli's edition of the Confessio Amantis, and Sir Harris Nicolas's Notice of Gower, in the Retrospective Review, N. S., vol. ii. No weight is to be attributed to his calling himself English, when asking to be excused for faults in French, in a French poem. He would have no

or from any one MS. in particular. Pauli's edition is founded on Berthelette's first edition, 1532, "carefully collated throughout" with the Harl. MSS. 7184 and 3869. Of the first Pauli says: "This volume, on account of its antiquity and its judicious and consistent orthography, has been adopted as the basis for the spelling in this new edition." Pauli says that he has also used Harl. MS. 3490, and the Stafford MS. where it was important, and that his "chief labour consisted in restoring the orthography and in regulating the metre, both of which had been disturbed in innumerable places by Berthelette." As the result is eminently unsatisfactory, it has been thought best, in giving a specimen of Gower, to print the original in precise accordance with some MSS.

The following MSS. of Gower's Confessio Amantis are described by Pauli. At Oxford, having the verses to Richard II, and those on Chaucer: MS. Laud. 609, Bodl. 693, Selden, B. 11, Corp. Chr. Coll. 67;—without these verses: MS. Fairfax 3, Hatton 51, Wadham Coll. 13, New Coll. 266;—with the first and without the second, MS. Bodl. 294;—dedicated to Henry of Lancaster, and with verses on Chaucer; MS. New Coll. 326. In the British Museum, Harl. 7184, 3869, 3490. MS. Stafford, in the possession of the Duke of Sutherland. Pauli does not mention the MS. 134, of the

Society of Antiquaries.

The MSS. most accessible to me were the four cited suprà p. 253. Of these the orthography of Harl. 3869 appeared to me the best, and I have therefore printed it in the first column. In the second column I have given the text of Harl. 7184, which Pauli professes to follow; and in the third the text of the MS. of the Society of Antiquaries, No. 134. The fourth column contains the conjectural pronunciation. By this means the diversities of the orthography and the uniformity of the text will be made evident. It is the former in which we are most interested. The passage selected for this purpose is the story of Nebuchadnezzar's punishment, as being unobjectionable in detail, and sufficient in length to give a complete conception of the author's style.

But as the Message from Venus to Chaucer possesses great interest from its subject, I have added a copy of it according to Harl. MS. 3869, from which Pauli states that he has taken the copy printed in his edition. In the second column I have annexed the same text according to the MS. of the Society of Antiquaries, and, since the passage does not occur in the other two MSS., in the third column I have added my own systematic orthography, and in the fourth column the conjectured pronunciation. For these two last columns a composite text has been chosen, founded on a comparison of the two MSS.

In all cases the phonetic transcript has been constructed on the same principles as that of Chaucer in the preceding section.

doubt considered himself an Englishman, as he spoke English and was an English subject and landowner, even if he had been born in Wales.

1 As this MS, makes no distinction

between z 3, but writes the guttural with the same z that it uses in Nabu-godonozor, I have used z throughout its transcription.

§ 3. Wycliffe.

John Wycliffe born 1324, died 1384, is supposed to have commenced his version of the Scriptures in 1380, just as Chaucer was working at his Canterbury Tales. We are not sure how much of the versions which pass under his name, and which have been recently elaborately edited, are due to him, but the older form of the versions certainly represents the prose of the xiv th century, as spoken and understood by the people, on whose behoof the version was undertaken. Hence the present series of illustrations would not be complete without a short specimen of this venerable translation. The parable of the Prodigal Son is selected for comparison with the Anglosaxon, Icelandic, and Gothic versions already given (pp. 534, 550, 561), and the Authorized Version, with modern English pronunciation, inserted in Chap. XI., § 3.

English pronunciation, inserted in Chap. XI., § 3.

The system of pronunciation here adopted is precisely the same as for Chaucer and Gower, and the termination of the imperfect of weak verbs, here -ide, has been reduced to (id), in accordance

with the conclusions arrived at on p. 646-7.

CHAPTER VIII.

ILLUSTRATIONS OF THE PRONUNCIATION OF ENGLISH DURING THE SIXTEENTH CENTURY.

§ 1.

William Salesbury's Account of Welsh Pronunciation, 1567.

THE account which Salesbury furnished of the pronunciation of English in his time being the earliest which has been found, and, on account of the language in which it is written, almost unknown, the Philological and Early English Text Societies decided that it should be printed in extenso, in the original Welsh with a translation. This decision has been carried out in the next section, where Salesbury's treatise appropriately forms the first illustration of the pronunciation of that period. But as it explains English sounds by means of Welsh letters, a previous acquaintance with the Welsh pronunciation of that period is necessary. Fortunately, the appearance of Salesbury's dictionary created a demand to know the pronunciation of Welsh during the author's lifetime, and we possess his own explanation, written twenty years The book containing it is so rare, that it is advisable to print it nearly in extenso, omitting only such parts as have no phonetic interest. Explanatory footnotes have been added, and the meaning of the introduced Welsh words when not given by Salesbury, has been annexed in Latin, for which I am chiefly indebted to Dr. Benjamin Davies of the Philological Society. It has not been considered necessary to add the pronunciation of the Welsh words as that is fully explained in the treatise, and the Welsh spelling is entirely phonetic. A list of all the English and Latin words, the pronunciation of which is indicated in this tract, will form part of the general index to Salesbury given at the end of the next section.

There are two copies of this tract in the British Museum, one in the general and the other in the Grenville library. The book is generally in black letter (here printed in Roman type,) with certain words and letters in Roman letters (here printed in italics). The Preface is Roman, the Introductory letter italic. It is a small quarto, the size of the printed matter, without the head line, being 5½ by 3½ inches, and including the margin of the cut copy in the general library, the pages measure 7½ by 5½ inches. It contains 6½ sheets, being 27 leaves or 54 pages, which are unpaged and

1

unfolioed. In this transcript, however, the pages of the original are supposed to have been numbered, and the commencement of each page is duly marked by a bracketed number. The title is lengthy and variously displayed, but is here printed uniformly. In the Roman type (here the italic type) portion, VV, vv, are invariably used for W, w, and as there is curious reference to this under the letter W, this peculiarity has been retained in the following transcript. Long f is not preserved except in the title.

[1] A playne and a familiar Introductio, teaching how to pronounce the letters in the Brytishe tongue, now commonly called Welfhe, whereby an Englysh man shall not onely wyth eafe reade the fayde tonge rightly: but marking the same wel, it shal be a meane for hym wyth one labour to attayne to the true pronounciation of other expedient and most excellent languages. Set forth by And now 1567, pervied and VV. Salefbury, 1550. augmeted by the fame.

This Treatife is most requifite for any man, yea though he can indifferently well reade the tongue, who wyl be thorowly acquainted with anie piece of translation,

[4] . . . Some exclamed . . . that I had peruerted the whole Ortographie of the [English] tounge. Wher in deede it is not so: but true it is that I altered it very litle, and that in very few wordes, as shall manifestlye appeare hereafter in the latter end of this booke. No, I altered it in no mo wordes, but in suche as I coulde not fynde in my hart to lende my hand, or abuse my penne to wryte them, otherwyse than I have done. For who in the time of most barbarousnes, and greatest corruption, dyd euer wryte euery worde as he souded it: As for example, they than wrate, Ego dico tibi, and yet read the same, Egu deicu teibei, they wrate, Agnus Dei qui tollis, but pronounced Angnus Deei quei towllys.\(^1\) And to come to [5] the English tung. What you Scoler did euer write Byr Lady, for by our Lady? or nunkle for vnkle? or mychgoditio for much good do it you? or sein for signe?

1 These Latin mispronunciations were therefore (eg-u dei-ku tei-bei, Aquis Dee i kwei tooul is). Probably (Deei) should be (Deei), but it is not so marked. The phonetisation is not entirely Welsh. The pronunciation (tooul is) was in accordance with the general sound of long o before & see

suprà p. 194.

The English examples were probably pronounced (bei'r laa'd, nugk'l, mitsh-gud-it-ju, sein). It seems scarce-ly probable that an (o) should have been used in a familiar pronunciation of And thus for my good wil molested of such wranglers, shal I condiscend to confirme their vnskylful custome.... [8] Wyllyam Salesbury to the Reader.

[These two pages set forth that after the publication of his dictionary persons wanting to know Welsh asked him whether his dictionary would serve their purpose, and [9]... amongst other communication had, they asked, whither the pronounciation of the Letters in Welsh, dyd dyffer from the Englysh sounding of them: And I sayde very muche. And so they perceiuing that they could not profite in buildyng any further on the Welsh, lackyng the foundation and ground worke (whych was the Welsh pronounciation of the letters) desired me eftsoones to write vnto them (as they had herd I had done in Welsh to my Country men, to introduct them to pronounce the letters Englysh lyke) a fewe English rules of the naturall power of the letters in our toungue.

And so than, in as much as I was not onelye induced wyth the premises, but also further perswaded, that neither any inconvenience or mischiefe might ensue or grow thereof, but rather the encrease of mutual amitie and brotherly love, and continuall friendship (as it ought to be) and some commodity at the least wyle, to suche as be desirous to be occupied there aboutes. As for all other, even as it shall never woorke them pleasure, so shall it no displeasure.

Euen therefore at the last, I haue bene so bolde as to enterprise (condescending to such mens honest request) to inuent and wryte these playne, simple, and rude rudimentes of the Welsh pronounciation of the letters, most humbly desiring the Readers to accept them with no lesse benouclent humanitie, then I hartily pretended towardes them, when I went about to treate of the matter.

[12] ¶ An aduertisment for Writers and Printers.

¶ Ye that be young doers herein, ye must remember that in the lynes endes ye maye not deuide these letters ch, dd, ff, U, th: for in this toungue every one of them (though as yet they have not proper figures) hath the nature of one entiere letter onely, and so as vnnaturall to be deuided, as b, c, d, f, or t, in Englysh.

 \P The pronounciation of A.

A In the British in euerye word hath ye true pronounciation of s in Latine.8 And it is neuer sounded like the diphthong au, as

1 Here the modern Welsh alphabet introduces ng = (q).

Not used in Modern Welsh.

3 Here ph (f) is introduced in modern Welsh but only for proper names,

and as a mutation of p.

- 4 Salesbury's explanations give the following values to these letters, Ioliowing values to these letters,—
 A aa a, B b, C k, CH kh, D d, DD
 dh, E ee e, F v, FF f, G g, NG q,
 H H, I ii i, K k, L l, LL lhh, M m,
 N n, O oo o, P p, PH f, R r, S s, T t,
 TH th, V v, U y, W u, Y y. The
 pronunciation of the Welsh U and Y
 will be expecially approximately becomes will be specially considered hereafter.
 - 5 This is of course merely fanciful.
- 6 The vowel o is also mutable: "Compare the German Umlaut, thus bardd [sacerdos], pl. beirdd; corn [cornu], pl. cyrn; dwrn [pugnus], pl. dyrnau.—B.D."

⁷ This is by no means a complete list of modern Welsh diphthongs, and no notice has been taken of the numer-ous Welsh triphthongs. The Welsh profess to pronounce their diphthongs with each vowel distinctly, but there is much difficulty in separating the sounds of ae ai au ay from (ai), and iw from uw (iu, yu), oe, oy fall into (oi), and ei sounds to me as (ei). In is is is initial, Welshmen conceive that they pronounce (Ja Je Jo), and similarly in wi. wy they believe they say (wi, wy). This is doubtful to me, because of the difficulty all Welshmen experience, at first, in saying ye 2000 (1) wuu), which they generally reduce to (i uu).

That is the Welsh pronounce Latin a as their own a. Wallis evidently

heard the Welsh a as (see, se), supra p, 66, l. 18. Compare p. 61, note.

the Frenchmen sounde it commyng before m or n, in theyr toungue, nor so fully in the mouth as the Germaynes sound it in this woord wagen: Neyther yet as it is pronounced in English, whan it commeth before ge, ll, sh, tch. For in these wordes and such other in Englyshe, domage, heritage, language, ashe, lashe, watch, calme, call, a is thought to decline toward the sound of these diphthonges sl, sl, and the wordes to be read in thys wyse, domaige, heritaige, languaige, aishe, waitche, caul, caulme. But as I sayd before a in Welsh hath alwayes but one sound, what so euer letter it folow or go before, as in these wordes ap, cap, whych haue the same pronounciation and signification in both the tongues.

[13] Much lesse hath a, such varietie in Welshe, as hath Aloph in Hebrue (which alone the poynts altered) hath the sound of euerye vowell.4 Howbeit that composition, and derivation, do oft tymes in the common Welsh speache chaunge a into e, as in these wordes, eneveith [semel] soithfed [septimus]. So they of olde tyme turned a into o or as in making their plural number of some wordes reserving the same letter in the termination, and the woord not made one sillable longer, as apostol [apostolus], opostyl [apostoli]: caeth [servus], caith [servi]: dant [dens], daint [dentes], map [filius], maip [filii]; sant [sanctus], saint [sancti]: tat [pater], tait [patres], etc., where in our tyme they extend them thus, apostolion, or apostolieit, caethion: dannedd or dannedds: maibion, santis or seinie: taidie or tadeu. But now in Northwales daint & taid are become of the singular number, taid [avus] being also altered in signification Neuertheles e then succeedeth, & is also wrytten in the steede of a: so that the Reader shall never be troubled therewith.

\P The sound of B.

B in Welsh is vniuersally read and pronouced as it is in Englyshe. Albeit whan a woorde begynneth wyth b, and is ioyned wyth moe woordes commyng in a reason, the phrase and maner of the Welshe speach (muche like after the Hebrue idiome) shal alter the sound of that b, into the sound of the Hebrue letter that they call Beth not daggessed, or the Greek Veta, either els of v being consonant in Latine or English: as thus where as b, in thys

¹ Suprà p. 143, l. 1, and p. 190.

^{*} Meant to be sounded as (vaagen, vaahgen, vaagen)? The ordinary pronunciation of modern Saxony sounds to me (bhaaghen)

³ Probably (dumaidzh, Her staidzh, laq waidzh, aish, waitsh, kaul, kaulm). For the change to as see pp. 120, 190; for that to as see pp. 143, 194.

⁴ Probably ap means ape; it does not occur in Salesbury's own dictionary, but he has "ab ne sink ub An ape," and "kap a cappe." The word siak is meant for (shak), and (shak) for (dzhak).

The Welsh now sometimes pronounce si as (sh), as existo petere (kai sho), and they use it to represent English (sh, tsh. zh. dzh), which sounds are wanting in their language. Hence the passage means (ab ne dzhak-ab), an ape or a Jack-ape, as I learn from Dr. Davies.

⁶ As aleph is only (1) or (;) in pointed Hebrew, (p. 10,) it has no relation to any vowel in particular.

The Greek β, is called (vii·ta) in modern Greek (pp. 518, 524). Salesbury seems to have pronounced (vee·ta).

So doe these welsh words cuvit, cuvicul, vioses, which be deriued of cubitus, cubiculum, bisextus.

Walshe [14] word bys a fynger, is the primitiue (or if I should borow the Hebrue terme) the radical letter, which comming in the context of a reason, shall not than be calle d b, but v, as in thys text: ei vys his

finger. And sometyme b shall be turned into m, as for an example: vymys my fynger: dengmlevydd for decblevydd, ten yeare old. And yet for all the alteration of thys letter b, and of divers other (as ye shall perceyue hereafter) whych by their nature be chaungeable one for an other, it shall nothyng let nor hynder anye man, from

the true and proper readyng of the letters so altered.

For as soone as the ydiome or proprietie of the tungue receyueth one lettter for an other, the radicall is omitted and left away: and the accessorie or the letter that commeth in steede of the radical, is forthwith written, and so pronounced after his own nature and power, as it is playne inough by the former example. Whych rule, wrytyng to the learned and perfectly skylled in the idiome of the tongue, I do not alwayes obserue, but not vnblamed of some, but how iustly, let other some iudge.

Prouided alwayes that such transmutation of letters in speakyng (for therein consisteth all the difficultie) is most diligently to be marked, observed, and taken hede vnto, of him that shall delite to

speake Welsh a right.1

¶ How C. is pronounced.

C maketh k, for look what power hath c in Englishe or in Latine, when it commeth before a, o, u, that same shall it have in Welshe [15] before any vowell, diphthong, or consonant, whatsoeuer it be. And as M. Melanchthon affirmeth, that c. k. q. had one sound in times past wyth the Latines: so do al such deducted wordes thereof into the Welsh, beare witnes, as, accen of accentu, Caisar Casare, cicut of cicuta, cist of cista, croc of cruce, raddic of radice, Luc of Luca, lluc also of luce, Lluci of Lucia, llucern of lucerna, Mauric of Mauricio: natalic of nataliciis.

How be it some of our tyme doe vse to wryte k. rather than c. where Wryters in tymes past have left c. wrytten in their auncient bookes, specially before a, o, u, and before all maner consonantes, and in the latter end of wordes. Also other some there be that

1 The initial permutations in the Welsh (and Celtic languages generally) are a great peculiarity. Some consonants have three, some two, and some only one mutation, and the occasions on which they have to be used do not seem capable of being reduced to a general principle. The mutations in Welsh are as follows :-

radical vocal mh nh ngh nasal m ph aspirate th ch

The (-) indicates the entire loss of g as gufr goat, dy afr thy goat; mh nh ngh are not (mh. nh, gh), but (mh nh (gh) and consequently if there is no preceding vowel which can be run on to the (m. n, q), a murmur is inserted as ('mH, 'nH 'qH). sound now c, as g, in the last termination of a word: Example, oc[juventus], coc [moles], lloc [agger]: whych be most commonly read, og, cog, llog.1

Furthermore, it is the nature of c. to be turned into ch, and other

whyles into g. But I meane thys, when a word that begynneth wyth c. commeth in construction as thus: Carve a Hart, Evvic a' Charve, a Hynde and a Hart. Rither els when c. or k. (for they be both one in effect) is the fyrst letter of a word

Constructio is taken here for the ioyning togither of wordes otherwise called a reason. Carw is the absolut word.

that shall be compounded, as for an example, Angraff, angred, angrist, which be compounded of an and of oraff, ored, Christ.2

The sound of Ch.

CH doth wholy agree with the pronounciatio of ch also in the Germayne' or *Scottyshe' toungue, of the Greeke Chy, or the Hebrue [16] Cheth, or of gh in English. And it hath no affinitie at all wyth ch in Eng-

Namely as the Scotishe Scriueners obserue, as richt, mycht, &c.

lysh, except in these wordes, Mychael, Mychaelmas, and a fewe ch also when it is the radical letter in any Welsh woorde, remayneth immutable in euery place. But note that their tongue of Southwales giveth them to sound in some wordes h onely for ch, as hvvech, for chvvech [sex], hvvaer for chvvaer [soror]. Further ch sometyme sheweth the feminine gender, as well in Verbes as in Nownes, as ny that hon y chodi [non digna illa quæ levetur]: y char hi [amator illius mulieris]: for if the meanyng were of any other gender, it shuld have been sayd i godi and not i chodi, i gar, and not i char. &c.

\P The sound of D.

D is read in Welshe none otherwyse then in Englyshe, sauyng onelye that oftentymes d in the fyrst syllables shalbe turned into dd, resemblyng much Daleth the Hebrue d. 10 And sometyme

¹ Mr. E. Jones observes that "this is in accordance with a general ten-dency in modern Welsh to use the medial for the tenuis." Dr. Davies

The modern Welsh forms are smaghraff hebes, annghred infidelitas,

*** where it has really three sounds (th, kh, kwh) dependent on the preceding vowel (p. 53). Probably Salesbery only thought of (kh).

4 The Scotch words cited in the mar-

gin, are pronounced (rekht mekht).

The modern Greek x, according to one account I received, is always (kh), sever (kh), but Prof. Valetta (p. 517, a. 2) used both (kh, kh).

The Hebrew \sqcap and \supset are by Euro-

peans confounded as (kh); taking the Arabic pronunciation of the corresponding ζ they are (λ , krh).

7 This therefore confirms the existence of a sufficiently distinct (kh) in English, which may have been occa-

sionally (th).

It is not to be supposed that ch in these words was (kh) at that time. But the text certainly implies that the ch was not (tsh), and was therefore pro-bably (k) as at present. All that is meant, then, probably, is that (kh) is more like (k) than (tsh).

The modern use in South Wales is to say (wh) initially for (kwh), as (whekh) for (kwhekh).

10 Hebrew 77 = (d, dh).

when a word begynnyng wyth d, is compounded wyth an: the d shall slyp away, as anaven [in-donum] of an [in] and daven [donum]; anoeth [in-doctus] of an [in] and doeth [doctus].

Dd is nothing lyke of pronounciation to dd in Englysh or Latine. For the double dd in Welsh hath the very same sound of dhelta or dhaleth, dashed wyth raphe,2 or of d betwyxt .ij. vowels in the Hispanish tongue, eyther els of th, as they be comonly sounded in these Englysh wordes, the, that, thys, thyne.4 Neither do I meane nothyng lesse then that dd in Welshe is sounded at any tyme [17] after the sound of th these wordes of Englishe, wyth thynne, thanke. But ye shall fynde in olde wrytten Englysh bookes, a letter hauing the fygure of a Romayne y, that your auncesters called dhorn, whych was of one efficacie wyth the Welsh dd. And this letter y' I speake of, may you see in the booke of the Sermon in the Englyshe Saxons tonge, which the most reuerend father in God D. M. P. Archbishop of Canturbury hath lately set forth in prynt.7 And ther be now in some countries in England, that pronounce dd euen

in these wordes *addes, fedder, according as they be pronouced in the Welsh. And ye must note An instrumet of a Cooper that dd, in Welsh is not called double dd, neither is it a double letter (though it seemeth so to be) wherefore it doth not fortify nor harden the sillable that it is in, but causeth it to be a great deale more thycke, soft, and smoothe. For he that first added to, the second d, ment thereby to aspirate the d, and signifie that it should be more lyghtly sounded, and not the contrary.

¹ Modern Greek δ is (dh). This, and the sound given above to β (p. 747 note 6), shews that the present modern Greek system of pronunciation (p. 523) was then prevalent in England, see pp. 529-530 and notes. Sir Thomas Smith's book, advocating the Erasmian system of pronouncing Greek, was not published till 1568, a year after this second edition of Salesbury's book.

² "Formerly, when Dogésh was not found in any of the מנרפבל letters, a mark called רָפָה Rā-phé, was placed above it, in order to shew that the point had not been omitted by mistake. With the ancient Syrians this was nothing more than a point made with red ink. The Hebrews probably wrote it in the same way: but, as this point might be mistaken for the vowel Khōlém, when printed, or, for one of the accents, the form of it was altered for a short line thus (-), which is still found in the Hebrew manuscripts, though very rarely in printed books." S. Lee, Grammar of the Hebrew Language, 3rd edit p. 21. Hence with raphe was equivalent to the ordinary (dh).

3 If the Spanish d in this place is not true (dh), it is so like it that Spaniards hear English (dh) as that sound, and English that sound as (dh). Don Mariano Cubi i Soler, a good linguist, who spoke English remarkably well, in his Nuevo Sistema . . . para aprender a leer i pronunciar . . . la lengua inglese, Bath, 1851, gives (p. 8) the Spanish deidad deity, as a threefold example of (dh). Yet the Spanish sound may be (c), p. 4.

4 Pronounced (dhe, dhat, dhis, dhein).

⁵ Pronounced (with, thin, thank). ⁶ This alludes to the common practice of printing y for b, which letter is usually called (thorn) not (dhorn), but see p. 541, note 2.

As this was first written in 1550,

the Archbishop must have been Cran-

⁸ Addis addice, now written adze, is generally called (ædz). Fedder is perhaps meant for feather (fedh 1) but may be father, provincially (fee dh.).

⁹ The Welsh has dd, ff, ll (dh, f, llhh), all meant as so-called aspirations of their d, f, l (d, v, l). Similarly Salesbury has rr for modern rh (infra

But I thynke it had be easier, more meete, and lesse straunge to the Reader, if that he had put h, after the former d, in a signe

of asperation, than to adde an other d thereto.

And as it semeth it is not passing three or foure C. yeares ago, synce they began to double their d, for before that tyme by lykelyhoode they vsed one constant maner of pronounciation of their letters even as the Hebrues did at the beginning.

[18] Dd also begynning a word, sheweth that it commeth in construction: for there is no woord commying absolutely that his

fyrst syllable begynneth wyth dd.

Moreover, dd relateth the masculyne gender, as (Ai ddeuvraich ar ei ddvvyvron) [illius hominis brachia duo super illius hominis pectora duo for in an other gender, it would be sayd, Ai deuvraich ar ei dvvyron [illius mulieris, &c. ut supra].

How E ought to be sounded.

E without any exception hath one permanent pronounciation in Welsh, and that is the self pronunciation of Epsilon in Greke,2 or of e in Latine, being sounded aryght, or e in Englyshe, as it is

sounded in these woordes, a vvere, vvreke, breke, vvreste.

And the learner must take good hede that he neuer do reade the said e as it is red in these English wordes, eve, beleue: 4 For than by so doing shall he eyther alter the signification of the word wherin the same e is so corruptly reade, either els cause it to betoken nothing at all in that speche. Example: pe [si] signifieth in English and if, now, ye rede it pi, than wil it betoken this letter p, or the byrd that ye call in Englyshe a Pye. And so gove is, a webbe: but if ye sound e as i reading it gevi, then hath it no signification in the Welshe.

And least peraduenture the foresayd example of the Welch or straunge tong be somwhat obscure, [19] then take this in your own mother tong for an explanation of that other: wherby ye shall perceive that the diversitie of pronounciation of e in these Englysh woordes subscribed hereafter, wyll also make them to have divers significatios, and they be these wordes, bere, pere, hele, mele.

p. 758); and Dan Michel and others use ss for (sh), (suprà pp. 409, 441) which many consider as an aspirate of s. Of course there is no aspiration, though the writing (dh), as Salesbury goes on to suggest, has arisen from this old error. Compare the Icelandic hj, M, hn, hr, hv, suprà p. 544. The modern Welsh e is, and seems

to have always been (ee, e) and never (ee, e), and hence I so transcribe it.

Meaning (e) of course.

Weer, wreek riceek, breek, wrest,

(Wii, biliiv) as appears from what immediately follows.

6 (Biir) bier or beer, (beer) bear, (piir) peer, (peer) pear, (Hill) heel, (Heel) heal, (miil) meel = meddle ?, (meel) meal, p. 79. Mr. Murray suggests that meal in the sense of food consumed at one time, German mahl, ags. mæl, Scotch (miel) may have been (meel), and meal in the sense of flour, German mehl, ags. melu, Scotch (mil) may have been (mil) and that these were the two sounds Salisbury meant to distinguish. This is à priori most likely, but the orthographies leave the matter in great perplexity. Promptorium: meel of mete; mele or mete, commestio cibatus; meele of corne growndyn', farina far. Palsgrave: meale of corne farine, meale of meate repast. Levins: meale farina, by flock meale minutim, meele cana, which would seem to indiNeither yet doe we vse in Welsh at any time to write e in the middle or last sillables, & to leaue it vnspoken in reading: as it is done by schena in Hebrue, or as the maner of wrytyng and readyng of the same is accustomed in Englysh, as it shall be more manifest by these wordes that followe: golde, sylke, purenes, Chepesyde: wherein (as I suppose) e is not written to the entent it might be read or spoken, but to mollifye the syllable that it is put in.¹

But now I am occasioned to declyne and stray somewhat from

How F. is commonly sounded.

F In Welsh being syngle, and v when it is consonant in Welsh, English, or Latine, be so nygh of sounde, that they vse moste commonly to wryte in Welsh indifferently the one for the other. And I my selfe haue heard Englysh men in some countries of England sound f, euen as we sound it in Welsh. For I have marked their maner of pronounciation, and speciallye in soundyng these woordes:

cate the difference (meel, miil) in an exactly opposite direction, but as Levins has: eale eel anquilla, beale beel spelunca, deale deele portio, he may have meant to imply that these words were in a transition state. The meaning of the two words (miil, meel) then, intended by Salesbury, must remain doubtful.

1 The utter extinction of the feeling

The utter extinction of the feeling for the final e is here well shewn. How a syllable can be "mollified" without any utterance, is not apparent. The words are (goold, silk, pyyrnes, Tsheep seid').

² (Man, wurship, God, wot, wish, gudnes, nem, net), since uette must be a misprint for nette.

- This may be partly an explanation of the varieties of orthography in the xvith century in printed books, but will not explain the nearly equal varieties in manuscript. I have noted at least ten ways of spelling tongue in in Salesbury's own book: tongue, tonge, tong, toungue, tounge, toung, tungue, tunge, tung
- ⁴ This is west country, still heard in Somersetshire and Devonshire. In early English books of the West of England u is constantly used for f. We also find it in Dan Michel's Kentish dialect 1340 (p. 409). The same places give also z for s.

soure, viue, disvigure, vish, vox: where they would say, foure, fiue,

disfigure, fysh, Fox, &c.1

But who seeuer knoweth the sounde of the letter called *Digammas* (whose figure is much lyke F, but ouerwhelmed Folicum J vpsydedowne, as ye see here J) he shall also know thereby the verye sounde of the syngle f in Welsh. They of Southwales rather vse v, where Northwales writers commonly occupye f.

¶ The sound of ff.

ff In Welsh hath but the same sounde that the syngle f hath in Englysh. And they are faine to vse the double f for the syngle f, because [21] they have abused f in steede of v a consonant. But in such wordes as have p for the fyrst letter of their originall (for to keepe the orthographie) the Learned wryte ph, and not f, as thus, Petr a' Phavel, Peter and Paule.

¶ The pronounciation of G.

G In every word in Welsh soundeth as the Hebrue Gymel: or g in Dutche, or as g in Englyshe soundeth before a, o, w. And marke well that g never soundeth in Welshe as it doth in English in these woordes, George, gynger. G also in Welsh sometyme (when it commeth in a reason) shall be turned into ch, and somtyme

elided or left cleane out of the word as thus, a chroedy hynny [ac postquam] ison no'crad [satisfactio vel sanguis]: koch no 'las [rufus vel viridis]: and not koch

G is but very seldom turned into ch. Gwedy Gwad, Glas

me glas: dulas [viridis nigrescens] of du [niger] and glas [viridis].

And otherwhyle wordes compounded shall put away g, as these
do, serloyre, dulas: whose symple be these, ser [aster], gloyre

[purus], du [niger] glas [viridis].

Also g is added to the beginning of such words as be derived of the Latine, whych begyn wyth v, as Gvvilim, gvvic, gvvynt, Grvent, gvvin, gosper of VVilielmus, vicus, ventus, Venta, vinum,

Moreouer, g intrudeth wrongeously into many wordes, namely after n, as Llating for Llatin, Katering for Katherin, pring for prin [vix].

[22] Of the aspiration of H.

H In every word that is wrytten in Welshe, hath hys aspiration in speakyng also, and is read, even as in these woordes of Englysh, hard, heard, hart, hurt: And therefore whersoever h is wrytten in Welshe, let it be read wythall, and not holden styll,

as it is done in French and Englysh, in such wordes as be derived out of Latyne, as these: honest, habitation, humble, habite.\(^1\) &c. Except when h is setled betwene two vowels in Welshe, wordes: for then it forceth not greatly whether h be sounded or not, as in these wordes that followe: deheu [dexteritas], kyhyr [musculus] mehein [adept], gvvcheu, hehèu,\(^2\) gvvchydd [textor], gohir [mora]. &c.

Moreouer, h sometime sheweth the gender, & somtyme the number of the word that it is set before, as in this word, Ar y hael: vpon her, or their brow. Further, h oftentimes is caused or engendred of the concourse of vowels, oi hervvydd, for oi ervvydd, and sometimes by accenting, as trugarha, for trugard. Then becaus eh is not of the essence of the word, I leave it for most part vnwrytten.

The sound of I.

I In Welsh hath the mere pronounciation of i in Latine, as learned men in our time vse to soud it, and not as they yt with their Iotacisme corrupting the pronunciation make a [23] diphthong of it, saying: veidei, teibei for vidi, tibi. But looke how i soundeth in Englysh, in these words, singing, ringing, drinking, vvinking, nigh, sight, might, right. So then i in every syllable in Welshe hath even the same sounde as e hath in Englyshe in these wordes, vvee, see, three, bee. And i is never sounded so broade in Welsh as it is in thys English word *I.4 And besyde that i is never consonant

*Ego Germayne tonge, or as Iota in the Greke. And because they that have not tasted of the preceptes of Grammer do not lightly vnderstande what thys terms consonant meaneth: I wyll speake herein as playne as I can, for to induce them to vn-

derstand my meanyng.

when i is consonant,
when i is wowel.

Therefore when we say in spellyng m a, ma: i e, ie:
st e, ste: maieste: or I e, Ie: s u s, sus: Jesus: now in these two wordes, maieste, and Jesus, i is consonant.
But when I spell on thys wyse: i per se i, o r k, ork, and wyth doyng them togyther, reade iork,: then i is not called consonant, but hath the name of a vowell.

¹ (On est, abitee shun, um bl, ab it). See above p. 220.

² The words gweheu, heheu, have not been identified.

3 (Siq'iq, riq'iq, driqk'iq, wiqkiq, nikh, sikht, mikht, rikht). Salesbury here however means (i) not (i), which he generally marks by y Welsh. Yet Welshmen at present do not seem acute in distinguishing (i, i), but use sometimes one sound and sometimes the other, suprà p. 112, note 1. The (nikht) and not (nei) or (neikht) sound of nigh is here pointed out by the context.

Meaning (ei).

⁵ That is, never has the sound of i consonant or j in English, that is, (dzh). Salesbury never thinks of (a) as a consonant, but only as the vowel (i). This must be borne in mind in reading what follows, in which a curious example of the mode of spelling out words in old English is presented. Of course his argument is perfectly worthless. There is a dispute, as already mentioned, concerning the Welsh i preceding another vowel. Mr. E. Jones and Dr. Davies both consider Welsh i to be (i) in such words ince inch, Iceus. In English, Smith and Hart consider (j) and (i) to be the same sounds, suprà p. 185.

And therefore if ye lyst to reade ryghtly Welshe woordes wherein is wrytten, an other vowell immediatly folowing (for therein

else is there no hinderaunce for the straunge Reader) than must you harken how i (whych I wryte for y) is sounded in these Englysh woordes: i-ane, i-arde, ielde, i elk, i elle, ielovo, iere, iok, iong, iougth, lorke, iou: And thoughe theese woordes bee wrytten here [24] now

I for e, in the word iye oculus, is now commoly written & read as it is in Welsh.

wyth i, in the first letter of euery one, yet it is ment that you should reade them as the i were y, and as they had been wrytten on thys fashion: yane, yarde, yelde, yell, yelov, yere, yok, yong, yougth, yorke, you.

Now I trust that the dullest witted chylde that neuer read but

two lynes, perceaueth so familiar a rudiment.

¶ The sound of K.

K Foloweth the rule of o in every poynt, and therefore looke for the effect of k, where it is treated of the letter o.

¶ The sound of L.

L Hath no nother differece in soud in Welsh than in Englysh.

And note that it neyther causeth a, nor o, when they come before it, to sounde anye more fuller in the mouth, than they do else where sounde, commyng before anye other letter. And for the playner vnderstandyng therereof, looke in the rules that do treate of the sounde of a and o.

And marke whan soeuer ye see *l* to be the fyrst letter of a worde, that eyther the same word commeth in construction, eyther else the woord is of an other language, and but vsurped in Welsh.

A worde beginning wyth l hauyng ll in hys [25] radical, maketh relation of the masculin gender, as yn y lavv in his hand: for yny

llave is in her hand.

Item thys lysping letter l is now smotheley receyued in some wordes, contrary to their original nominations, as tomest! for tompest; rriscl, trisclyn, for rrisc or rriscyn [cortex]: pymysl or pymyst! for pemblys [quinque digiti]: so named of the resemblace that the rootes haue wyth mans fingers: which is now better knowen by a more vnapte name euen Cecut y door, and in Englysh Water smalledge.

So likewyse to this letter l a loytring place is lent to lurk in this English word syllable. And thus much, that the wryters hereafter maye be more precise and circumspect in accepting the vulettereds

pronunciation by the authority of theyr hand wryting.

1 I have not met with this form iye esswhere, except in the Heng. MS. of C. T. v. 10. The sound seems to be (ii) as in the Scotch word ee for eye.

(a) as in the scotch word & for eye.

(Jaun, sard, silld, sel, sel-sou, sir, sook, suq, suuth, Jork, suu). The orthography yougth for youth is peculiar.

This alludes to the old English

pronunciation of tall, toll as (taul, tooul), supra p. 193-4

Apparently cicuta virosa, Water cowbane, Water Hemlock, now spelled

This, in conjunction with the preceding, is meant to point out the syllabic ('l), see p. 195.

¶ Of the straunge sound of double U.

Ll can not be declared anye thyng lyke to the purpose in wryting, but onely by mouth: if ye the wyll learne how it ought to be sounded: For (as it is sayd before of d) so the second l is added

Vide Oecolampadium.¹ in stede of h: 2 but looke how Lambda comming before Iota is sounded in the Greeke: 3 euen so pronounce we ll in the Welsh. And if ye could hyt kyndely on the right and iust pronounciation of lh thus aspirated: not leauyng unsouded the entire energie, and the whole strength of the aspiration: than shoulde not you bee farre dissonant from the true [26] sound of our Welsh ll.

For the Welsh \mathcal{U} is spoken the tongue bowed by a lyttle to the roufe of the mouth, and with that somwhat extendyng it selfe betwyxt the fore teeth the lyppes not all touching together)but leaving open as it were for a wyndow) the right wyke of the mouth for to breathe out wyth a thycke aspirated spirite the same \mathcal{U} . But as I sayde before, and if ye wyll haue the very Welsh sounde of

¹ Joannes Œcolampadius, the Latinized name of Johann Hausschein, the reformer, 1482-1531, who studied Greek under both Reuchlin and Erasmus, the teachers of the rival Greek Pronunciations.

² The Welsh *ll* is not (lh) the whisper of (l), for in (lh) the breath escapes smoothly on both sides of the tongue, and the sound may be frequently heard, with very little escape of breath, in French, table (tablh) for (tabl') see p. 52, and in Icelandic, p. 545. But for the Welsh *U*, one side (generally the left) of the tongue lies along the whole of the palate so as entirely to prevent the passage of air, just as for the English cl'ck (1) p. 11, by which we excite horses, and the breath is forcibly ejected from the right side, making it vibrate, at the same time that there is a considerable rattle of saliva, thus much resembling (kh) or rather (krh), and the sound is, perhaps for this reason, conceived as a guttural aspirate by Welsh grammarians. The Welsh it is a voiceless or whispered consonant which I represent by (lhh) p. 6, the second (h) to the right typifying the ejection of breath on the right side, and the initial (lh) the resemblance of the sound to (lh) which when energetic may be substituted for it without loss of intelligibility, al-though the Welsh ear immediately detects the difference. The lips may be fully open, or only opened on the right; the effect is entirely due to the

action of the tongue and is very peculiar. At a distance llan (lhhan) when shouted sounds like (tlan). There shouted sounds like (tlan). There is no resemblance to (thlan) which Englishmen generally substitute for it. When the table of palaeotype was drawn up I had never heard the voiced form of (lhh), which for convenience, may be written (/hh). It is possible also to have palatalised varieties of both, which must then be written (ljhh, ljhh). All these forms with (hh) are very awkward, but they are sufficiently distinctive, and the sounds are very rare. In: Il Vangelo di S. Matteo volgarizzato in dialetto Sardo Sassarese dal Can. G. Spano accompagnato da osservazioni sulla pronunzia di questo dialetto e su varj punti di rassomigli-anza che il medesimo presenta con le lingue dette Celtiche, sia ne' cambiamenti iniziali, sia nel suono della lettera L, del Principe Luigi-Luciano Bonaparte, Londra 1866, it is stated that (lhh, lhh, ljhh) occur in the Sardinian dialect of Sassari, and (lhh, lhh) in the dialect of the Isle of Man. The Prince pronounced all these sounds to me, but he laid no stress on their unilateral character, or rather discovered it. In this case (th, dh) were really the sounds uttered for (lhh thh), according to Mr. M. Bell's views, Visible Speech, p. 93, and Mr. Bell on hearing them, analyzed them thus.

³ Here Salesbury most probably elevated (li) first into (ls) and then into (ljh). See also p. 546, n. 1.

thys letter, geue eare to a Welshmä when he speaketh culltell,

whych betokeneth a knyfe in Englysh: or ellyll a ghoste.

The Welshman or the Hispaniarde compose their mouthes much after one fashion whan they pronounce their ll, sauyng that the Welsheman vttereth it with a more thicker and a more mightier spirite. The Englyshe mans toungue when he would sound ll, and a wideth to tl.

The Germanes lykewyse, as writeth Iohn Auentin, as we do now, did in auncient time aspirate l, but pronouncing it somewhat hardish in the throte. And in an other place he recordeth that in old Charters he findeth l aspirated, nameelye in proper names, and after thys manner H L.² Thus you see how tonges though far distant, have som affinitie in one thyng or other.

The sound of M.

[27] M In Welsh hath such a sound as ye heare it haue in Englysh or Latine: but yet it is one of the letters that be channgeable in construction as thus: mvvy, moe, llai no vvvy, lesse ormore, mvvyvvvy, more and more: mal hyn, or val hyn, as thus: megis or vegis, as.

The sound of N.

N Is none otherwyse sounded in Welshe then in Englyshe: but sometyme, after the Latine maner, whan it commeth before b or p in composition, it is than turned into m, as ymblaen [coram], which is compounded of yn and blaen: amparch [contumelia] of an [in] and parch [reverentia]: ampvvyll [impatientia], or an & pvvyll [prudentia].

N also is often times accessory, I meane such as intrudeth into many wordes, namely beginning with c or k, as vyncar [meus

carus] vy-car, vyndevv [meus deus], for vy-derv, or vynycv.

And because in suche woordes it is nothyng of the essence thereof, I doe, but not without offence to some Readers, oftentymes omit the writing of it, thynckyng that it is not more meete to admyt n in our so sounded wordes, than in these Latine vocables agnus, magnus, ignis, at what tyme they were thus barbarously sounded, angnus, mangnus, ingnis. After this sort erept n into messanger coming of message. By yo like analogie polanger (which I thynke no man doth so write) must be written for potager, and so corrupt Portingal for Portugal.

[28] But I will prescribe nothing herein, least of some Remissian I be termed a Precisian.

- ² The Spanish *ll* is (lj), so that Salesbury has elevated it to (ljh), see preceding note. No doubt in attempting to imitate it he put his own tongue into the familiar Welsh position, and took it for the Spanish.

The sound of O.

O In Welsh is sounded according to the right sounding of it in Latin: eyther else as the sounde of o is in these Englyshe wordes: a Doe, a Roe, a Toe: and o neuer soundeth in Welsh as it doth in these words of Englysh: to, do, tvvo.2 But marke that o in Welshe going before Il, snundeth nothing more boystous,3 that is to say, that it inclineth to the sounde of the diphthong ou (as it doth in Englishe)4 no more than if it had gone before any other letter.

The sound of P.

P in Welsh differeth not from the Englysh sound of p, but p commyng in construction followeth the rules of the Hebrue Phe,5 sauing that somtyme it is turned into b, as thus: pedvvar neu bemp [quatuor vel quinque], for pemp. And sometyme p in composition is chaunged also into b, as whan we say ymbell [longe], for ympell. And one whyle it is left out of the compounde woordes: as whan these wordes; kymell, kymorth, be wrytten for kympell [compello], kymporth [comporto].

And an other whyle our tongue geueth vs to sound it as it were an h, as when we say: ymhle [29] ymhlvvy, ymhlas for ymple [?], ym-plvvy [in plebe] ym-plas [in palatio].

But p turned into ph, maketh relation of the feminine gender, as O'i phlant, of her children, gvvisc i phen, the attire of her head.

The sound of Q.

Q Is not received among the number of the letters in Welshe as yet, but k supplyeth his rowme, and vsurpeth his office in energy place. And the Greekes are fayne to practice the same feate, as ye may see done. Luc. ii and Ro. 16. where Kyriniou is written for Quirino, Kuartos for Quarto.6

The sound of R.

R Is sounded a like in Welsh and Englysh, but r, in Welsh for the most part is pronounced wyth aspiration, especially being the first letter of the word. And for the aspiration h, they commonly

1 (Doo, roo, too). In my observations of Welsh, the long and short of were invariably (oo, o). The sounds (oo, o) seem practically unknown, and not appreciated by Welchmen. That these were also the English sounds in the xvi th century I infer as in p. 95.

(Tu. duu, tuu). ² Boystous, probably (buist-us) does not appear to be a misprint, but a more correct form than the modern boisterous. The Promptorium has boy-stows, the Catholicon bustus, the Ortus Voc. boystous, Chancer boystously 8667 (Wright reads boystrously incorrectly, the r not occurring in Harl, 7334,

Cam. Univ. MS. Dd. 4. 24. has boistously,) and in several other places, the Wycliffite version has bostous, Math. 9, 16, as pointed out by Mr. Way on the word in the Promptorium. The origin seems to be the Welsh bwyst wildness, bwyst savage, bwystfil wild beast, bwystus brutal ferocious, which account properly for the diphthong in the first syllable. Mr. R. Morris refers the word to bonst, Welsh bost.

4 This again refers to the English toll = (tooul).

put to r,¹ as they play by d and and l, euen thus: rrvvygvvyd [fractus], rrodres [vanitas], rringell [miles], Rufain [Roma]. But the maner of some is to wryte one great capitall R (when it is the fyrst letter of a woord) for the twoo double rr. Also r serueth the turne that n doth in Englysh, that is to wyt, to be put betwene vowels meeting together in two sundry wordes, for to stop the vncomely gaping in spech, as ye shall perceyue by these woordes of both the [30] tongues: yr-avvr: a-n houre: for mother nature wyll not admyt that we should pronounce y avvr, or a hour. But stepmother Ignorance² receyueth both r and n into some places where they are abused, as yr Llatin g, for y Llatin.

¶ The sound of S.

8 Soundeth in Welsh as it doth in Latin: neither hath it two divers soundes as it hath in Englishe or Frenche, for when it commeth betwene two vowels in these two languages, it is so remissely and lithly sounded, as it were z, as by these two wordes of both the speaches it is manifestly proued, Foisant a Fesant.

¶ The sound of T.

T Lykewyse hath but one sounde, and that as the Latines sound it in these wordes: atat, tute, tegit: Neyther do I meane that t in Welsh is sounded at any tyme lyke th, as some barbarous lyspers do, who depraue the true Latine pronounciation, reading amath, for smat, dederith, for dederit, &c.

Now be it marke well thys exception, that t is neuer read lyke o thorowout the Welsh tongue, as it is commonly read of Englyshemen in Latine verbales ending in tio, as

pronunciatio, electio, subjectio.

[31] Marke also, that it is the nature of t to be turned into d, and sometime into th, and some other tyme it is so lightly spoken, that the t is quite left away, and there remayneth but the h in steede of the t. But thys is to be vnderstande when t is the fyrst letter of a word set in construction to be construed or buylt together on thys fashion: Na thric yuhy dvvy aver ne dair [Ne mane in domu duas horas vel tres]. For before they be hewed, squared, and ioyned together wyth theyr tenantes and mortesses, they lye in rude and vndressed timber after this maner of sort: Na trye yn ty dvvy aver ne tair. Furthermore t in derivation is

left out of the deriued wordes or turned in n, that they myght sound more pleasaunt to the eare, as ye may take these for an example: chevanoc or chevaa

The absolute wordes

- 1 To r, that is, two r's, or rr. The modern form is rh, rather ('rh) than (rh), so that Rhys ('Rh'ys) sounds more like (His) than (ris).
- ³ Of course "an hour" is the old form, and "a" comes from the omission of n before a consonant. The ignorance is therefore rather in Salesbury.
 - 3 This occasions difficulties in writ-

ing the sounds of English words in Welsh letters.

* Palsgrave says of the French d that he sees "no particular thyng wherof to warne the lernar saue that they sounde nat d of ad in these words adultere, adoption, adov/cer, like th, as we of our tonge do in these wordes of Latine ath athiuuandum for ad adiu-vandum corruptly."

noc; gvvnoc or gvvnnroc monvveni or monvvenni: heinieu or heinnieu of chrvant [libido], grvynt [ventus], monvvent [monumentum], haint pestis.

The sound of Th.

Th hath the semblable and lyke sound in Welsh as it hath in Englysh in these woordes, thorovve, thycke, and thynne: 1 but it is neuer so lythly spoken as it is commonly sounded in these other

words: that, thou, thine, this.2

Moreover th wrytten for the fyrst letter of any worde, sheweth the same woord to be than in construction. For there is no Welshe woorde standing absolutelye that hath th for hys fyrst letter: but t is hys native and original letter, for the [32] which in construction th is commonly vsed. Neither yet do we vse to wryte th, in any woord, and to reade the same as t or d, as is commonlye done in these English wordes: Thomas, throne, threasure, Thauies Inne:

which be most universally spoken after this sorte: Thauies In

Tomas, trone, treasure, Davies Inne.3

Item th sometyme signifieth the word to perteyne to the feminine gender, as Oi thuy of her house, otherwyse said, oi duy, of hys house.

The sound of V being consonant.

V specially being wrytten in thys maner of fashion v, soundeth in Welshe as in Englyshe or Latine, whan it is a consonant. And

There is no woorde in welsh that bewith v ginneth with being radicall.

it lightly neuer begynneth a woorde, except the woord be constructed and ioyned wyth one or more wordes. For other b or m, being the originall or radicall letter, is transmuted or chauged (according to the congruitie of the

toungue into v a consonant.

But Latine wordes begynnyng with v, and vsurped in the Welsh, shall receyue g to their fyrst letter, as is declared more at large in the treatice of the letter G, and sometyme B, as bicar of vicarius.

The sound of u beyng a vowell.

But u written after this manner u, is a vowel, and soundeth as the vulgar English people sound it in these wordes of English: trust, bury, busy, Hu [33] berden. But know well that it is neuer sounded in Welsh, as it is done in any of these two Englyshe wordes (notwythstanding the diversitie of their sound) sure, lucke.6 Also

1 (Thur oou, thik, thin).
2 (Phat, dhou, dhein, dhis).

3 (Tomas, truun). see next section under Th. (tree zyyr. Daviz In).

4 The use of v is quite discontinued in Welsh, and f is always used in its

6 No doubt that he meant the sound of (trist, biri. bizi, Hiberden). (Trist) still occurs in Scotland, (biri) was even then more usually (beri) but is the common Scotch now, and (biz-i)

Huberden is probably Huremains. bertden, but I cannot find such place. There is a Hubberston in South Pembroke, which therefore may have the u pronounced in the Welsh manner and an Ibberton in North Dorset. These are the nearest names I can find.

6 (Syyr, luk) Bullokar gives (syyer) and he is particular in iden-tifying the sound with the French u. Hart has (siur) meaning (syyr), p. 167, and Salesbury writes suicr, with the

the sound of n, in French, or ū, wyth two prickes over the heade in Duch, or the Scottish pronunciation of u1 alludeth somwhat nere vnto the sound of it in Welshe, thoughe yet none of them all, doeth so exactly (as I thynk) expresse it, as the Hebraick Kubuts doeth.2

For the Welsh u is none other thing, but a meane sounde betwyxte u and y beyng Latyne vowels.3 And therefore who so euet wyll distinctlye learne the Welsh sound of u let hym once geue eare to a Northen Welsh man, whan he speaketh in Welsh, the wordes that signifie in English obedient (or) * chaff singlerly: whych be these in Welshe, uvudd, usun.4 And this vowell u alone amonge all the letters in Welsh, swarueth in sound from the true Latine pronunciation,

Thys u is more in vre wyth vs of Northwales than wyth theim of the South parteis: whose wryters abuse it, whan they wryte

thus, un yn for yn un's

The sound of W.

In Welshe and Englyshe hath but one fygure and power, though it chaunceth to have .ij. divers names: for in English ye call it double uu and in Welshe we geue it the [34] name of a

same meaning, pp. 165, 172, and indeed this passage is sufficient to shew that he did not mean (syur). Smith and Bullokar both give (luk).

¹ All meant for the sound of (yy), although at present there are occasional

faint differences of sound, but not ac-knowledged, French (yy), German (n), Swedish (uu), Scotch (2).

This of course means that Sales-

bury pronounced the Hebrew 727 (kibbus), generally considered as (u) in the same way as Welsh u; also he shews by writing the name kubuts, that he gave the same sound to the first towel in the name, generally identified with (i). This serves to shew, in con-junction with his opening sentence, that his sound of Welsh u did not much differ from (i, i), and that where he uses it for the representation of English sounds, he certainly meant (i) or (i).

3 It is difficult to determine what sounds the Welshman gave to Latin w, y, because these are precisely the Welsh vowels about which there is a difficulty. The next sentence but one, however, would lead us to suppose that his Latin u was (u), as it was different from the Welsh; but what his Latin y, properly (y), may have been, cannot be said. Assuming, however, that it was (i), then the mean sound ought to

be (1). By the kindness of Dr. Davies I had an opportunity of consulting three Welsh students at the Regent's Park College about the Welsh u, y. The sound of u in Duw appeared to be (i), in llewyrchu it was not distinguishable from (i), in dechreuad, go-leuni, I could not distinguish the diph-thong eu from the Euglish (oi), though the sound of ai in gair was distinctly (ai) and occasionally (aai), but ai, ae, au were nearly if not quite indistinguishable; at most (ai, ae, ai) would mark the distinctions. I understood from Dr. Davies that the theoretical pronunciation of u was (y), and that in solemn declamation an attempt was made to preserve the sound, but that usually u became (ii, i) or even (i). This is perfectly similar to the common German substitution of (ii) for (yy) in the pronunciation of their ii, an alteration never made in French. In Danish and Swedish the y, theoretically (y), becomes (i) or, to my ear, practically (i, i).

4 Theoretically (yyv'ydh, yy'syn), practically (iiv'idh ii'sin) or even (iiv'idh, ii'sin) which latter sounds, perfectly easy to English organs, would be intelligible throughout Wales.

5 This refers only to the orthography.

See below under y.

syngle u but than soundyng it after the Latine pronuciatio or ells

as you now sounde your oo. 1

But the lesser Greeke o ioyned togyther wyth the Greke y made a diphthong, 2 or Hebraic Vau cum puncto schurek in ventre, 3 either

oo in these English vocables: booke, looke, boorde, woorde, shall

rather expresse hys name, than hys proper nature.

But hys owne power, and peculier office in Welshe, shall there no letter nor letters more precisely eset it forth than the vv it selfe, or oo wyth the Englysh pronunciation. For all thoughe the Germaynes vse a vv yet in some wordes sounde they it (to my hearing) as the forther u were a vowel, and the latter o consonant, where we the Britons sounde both uu wholy togyther as one vowell, wythout anye seuerall distinction, but beynge alwayes eyther the forther or the latter parte of a dyphthonge in Englyshe on thys wyse:

wyth aw: and in Welshe as thus: vvyth, avven.6

And though, as I sayd before, I fynde in som auncient writers 6 for vv, yet in other I find vv in words now vsually written wt v or f as eithavv, for eithav or eithaf. In which kynde of wordes, bycause they of Southwales vse yet to kepe ye pronuciatio of it, saying tavely where we saye tavelu or taflu [jacio]), I doe rather vse for the more indifferencie to wryte v than f, eve that they may the more aptly resolue [35] it into their woonted vowell vv, and we maye sounde the same after our more consonaunt acceptation. But contraryly, we saye deunydd where they sound devnydd or defnydd [substantia], and some corrupters denvydd.

The sound of X.

X Is not founde as yet in the Welshe Alphabet: For the Welshe speache hath no neede of hys office: because that suche Walshe woordes as be deducted of the Latine, turne their x into s, as doe these: nos, estenna, escommun, estran, bicses, escuso, escutio, Sas or Sais, which come of nox, extendo, excommunicatus, extraneus, bisextus, excuso, excutio, Saxo.

Guuk, luuk, buurd, wuurd). Bullokar and Gill also give (luuk), the shortening of the vowel into (luk) or rather (luk) is quite modern. North country pronunciation is still (luuk), though Mr. Melville Bell and Mr. Murray consider the difference between the Scotch and south country sounds to be merely qualitative, the former (luk), the latter (luk). Gill has (wurd), Butler (wuurd, wurd). Boorde was the spelling at that time for board, as in the Promptorium, Levins has boord, and Butler pronounces (buurd).

5 The meaning of this is difficult to

comprehend, and the difficulty is increased by the misprint o, for w or a. He divides w, as he prints it, into vv, which he immediately calls ww, but which of these two letters he considers "the forther" and which the "latter," is not plain. The best I can make out is, that he heard German w as (vu), thus wann = (vuan), nearly (vwan) or perhaps (vwan). The last is not a very inapt way of representing (bhan), and one which I have heard given by many persons, as the best means of indicating the sound of initial (bh) to English or French speakers.

6 Here, in veyth, vv is in the "forther" part, and in avven in the "latter" part of the diphthong, which ought to make Salesbury's German ev = (uv), as (uvan), which being disyllabic is im-

The sound of Z.

Z In Welsh is vnknowen, in so muche that it was neuer placed in

possible. As Salesbury does not recognize (J) he also does not recognize (w), hence wyth aw = with awe, is to him (with au), not (with au). It is hopeless to look for agreement upon this point of theory. Supra p. 513, n. 2.

1 (In. sin, iz, thin, win). There can be little doubt as to the pronunciation of these words because sin, thin, win, also occur in Smith. Mr. E. Jones remarks: "Y has two sounds in Welsh, and it is the only letter that has two sounds. In monosyllables as dyn it is nearly = ce Eng. as deen (diin), in polysyllables as dynion = u in but (dention)." On which Dr. Davies observes, "rather i in hint" = (din ion). In the examination of this sound as pronounced by the Welsh students at Regents Park College, (suprà p. 761, note 3,) the word dynion seemed more like (dontion) than (dontion), but I noted the following pronunciations, gyd (gad), yn y (an a), trwyddo (truu-idho), ynddo (ən.dho) bywyd (bən.id), sydd (siidh), llewyrchu (lhheworkhi), tywy-Ucch (towalhh ukh) and (towilhh ukh) in North Wales; the words are all in John i., 1-5. According to Dr. Davies the theoretical sound in all places is (2), which is aimed at in solemn or stately style, but in South Wales the universal sound is (i, i). In North Wales (3, i), or (2, i) are heard. The sound may be (y). The sound (3), or (2), is quite familiar. Salesbury evidently only knew one sound, and it is im-

portant with regard to his English to be sure that he did not know the sound (e), which we do not find recognized in English till the xvii th century, see p. 174. The following are the rules usually accepted for the pronunciation of Welsh y. In the monosyllables dy, dyd, dyt, fy, myn, y, y, ydd, ym, yn, yr, ys, it is pronounced (a), in all other monosyllables (y). In final syllables it is always (y). In the prefix cyd, and sometimes cyn, as cydeistedd, cynocsoedd, and in adjectives and adverbs prefixed as cryf-arfog, it is also (y). After w it is generally (y) as gwynfyd, mwynhâu, bwyta, but to this rule there are several exceptions especially if w is short or follows a vowel, as chicyrnu, chicysu, llewyrchu, tywyllu, awyddu, ewyllys in which it is (a). In all other cases not specified in these rules it is (a).

2 (Weid, weind). The first word is clear, but the second is doubtful. Wynge should = wing, which was certainly called (wiq). There is a Norfolk word winge to shrivel, in Wright's Dictionary of Obsolete and Provincial English, but that is probably (windgh). Most likely evynge is a misprint for evynde, which, even as a substantive, is called (weind) by Bullokar, and (woind) by Gill.

³ The Greek v was originally (y), but was (i) at the time Salesbury wrote. What he alludes to in this marginal observation is not clear.

The English examples are more difficult; differ is probably differ defer; provide occurs, not próvide, though we have prôvident. Mr. Brock suggests that prôvide may be meant for proved; denye only occurs as deny', but denier is both denier a French coin, accented denier' (deneer') in Shakspere, Richard III., act 1, sc. 2, last speech, v. 252—the other two passages in which it occurs are in prose,—and denier one who denies.

[45] ¶ A generall rule for the readyng of VVelsh.

T Hough there be divers precepts here to fore wrytten of the Welsh pronunciation of the letters, I would thinke it not overmuch dissonant, nor yet to wyde from the purpose, to admonishe you in thys behalfe, that is, that you ought not to reade the Welsh according as ye do the Englyshe or French, but even after the reading of the latin. For in reading English or French, ye do not rede some wordes so fully as they be wrytten.

And in many other ye seme to sound the sillables more fully that the expressed letters do give. Which maner of reading is so vtterlye eschued in Welsh, as ye perceyue it to be exactly obserued of them that perfitely reade the Latine tonge: Nei 46 ther do I meane here to cal them perfite and Latinelike Readers as many as do reade angnus, magnus, for agnus, magnus, ingnis, for ignis, santus, for sanctus, savel, for sal: sovel, for sol: and for mihi, meichei: and egory, for ego: tuvv for tu: and quith ligith, in stede of quid legit. &c.1 Therefore ye must learne to forget such maner of pronunciation, agaynst ye prepare your selues to reade ye Welsh. Moreouer, ye ought to know, that these wordes: dringo [scandere], grringo [calcitrare], kynga [sermo], myngen [juba], anglod [reprehensio], angred [infidelitas], and the most part of suche like Welsh wordes, having ng in them, and being of moc sillables then one, shal be red as these English wordes be (but ye must admit them to be red now as of two sillables euery word) Kynges, rynges, bryngeth, syngeth: For euen as ye do not rede them Kyn-ges, ryn-ges, bryn-geth, syngeth: but rather in thys wyse, Kyng-es, ryng-es, bryng-eth, syng-eth: euen so do we sound dring-o, and not drin-go: grving-o, not grvin-go: myng-en and not myn-gen. Albeit, yet as ng may be scucred and parted in this Englysh word syn-geth (but the signification altred) so have we some wordes in Welsh (when they are spoken) in whom the sillables may be severed in ng, as in these: en-gerth, Llan-grum, tringyrch, &c.

[Then follow seven entire pages and two portions of pages of a letter to Mr. Collingborn speaking of the advantages to Welshmen of learning English, the low state of Welsh literature, &c., with many wordy digressions, and ending thus:]

§ 2.

William Salesbury's Account of English Pronunciation, 1547.

The Welsh text of the Introduction to Salesbury's Dictionary is here reproduced *literatim* with all the errors, misprints, false collocations of letters, antique spelling, of the original, but without the long f, and in Roman type in lieu of black letter. Those who are interested in antiquarian Welsh will prefer seeing it in this form, and will be better pleased to set it right for themselves than to have it reduced to form and order for them, while the English translation will enable the English reader to dispense with the Welsh. English and Foreign words are italicised

There are two perfect copies of this work in the British Museum, one in the general library (628, f, 25), and one in the Grenville Library (7512). The volume is a small quarto, $7\frac{1}{2}$ by $5\frac{1}{2}$ inches, including the margin; the letter-press, without the headline, measuring $6\frac{1}{8}$ by $3\frac{3}{8}$ inches. It is in black letter, unpaged. The signatures are: none to the first sheet, Bi. Bii. Biii. C.i. Cii, and then, after a blank leaf, the signatures go from A to S, the last letter having only 6 pages. The title occupies the first page, and is in English only, as follows:

A Dictionary in Englyshe and Welshe moche necesfary to all suche Welshemen as wil spedly learne the englyshe tongue thought vnto the kynges maiestie very mete to be sette forthe to the vse of his graces subiectes in Wales: wherevnto is prefixed a little treatyse of the englyshe pronunciacion of the letters, by Wyllyam Salesbury. The colophon is

¶ Imprynted at London in Foster lane, by me Iohn Waley (1547). Cum privilegio ad imprimendum solum. (',')

Immediately after the title is a dedication in English only: "To the Moost Victoriouse & Redowbtede prince Henry theyght by the grace of God Kynge of Englande, Fraunce and Irelande defender of the faythe And of the Churche of Englande and also of Irelande in erthe the supreame Hedde be all prosperitye in continuall honour." This dedication extends over three pages, and concludes: "Youre poore and humble subjecte Wyllyam Salesburye."

Then follows the address to the reader, occupying five pages. The beginning of each page is marked in the following transcript by a black figure in brackets as [5], and in numbering the pages of the book I reckon the title as p. 1, and the back of it as p. 2. On p. 11 commences the actual treatise on the sounds of the letters, and, counting the two blank pages at the end of the third sheet, on p. 25 begins the dictionary itself of which the first page is annexed as a specimen, shewing the arrangement in four columns and the many Welsh words left untranslated. Indeed, as may be expected, it is extremely deficient, but it extends to 141 pages,

The English translation of the Welsh address to the reader and account of English Pronunciation was kindly made by Mr. E. Jones, of the Hibernian Schools, Liverpool, and obligingly revised by Dr. Benjamin Davies, of Regent's Park College, London, one of the Council of the Philological Society. No attempt has been made to imitate Salesbury's quaintness of language, but the meaning of the words is given as carefully as possible. In this English translation, where Salesbury cites an English word in the spelling of the time, it is printed in small capitals, his pronunciation in Welsh characters is subjoined in italics, and then the interpretation which I give to that phonetic transcript is added in palaeotype in a parenthesis, and when Salesbury gives no phonetic transcript, the conjectured palaeotypic form is given. If Salesbury adds the meaning in Welsh this is subjoined also in Italics, and a translation of it into Latin is annexed in brackets. When Salesbury gives no translation the Latin is still added. Thus: "LADDRE lad-dr (lad er) yscol [scala]," give the old English spelling LADDRE, Salesbury's phonetic Welsh transcript lad-dr, the palaeotypic meaning of the same (lad er), the Welsh translation of the original word yscol, and the Latin translation of the Welsh translation [scala]. References are added throughout to the page in which the passage is quoted or in which illustrative remarks occur, and these are inclosed in a parenthesis thus (p. 61), meaning, suprà page 61. This will avoid the necessity of subjoining footnotes. After the specimen of the dictionary is added an alphabetical list of all the words of which Salesbury gives or indicates the pronunciation, in this or the foregoing tract, with a reference to the different pages in this book where it is to be found, supplementing the references in the text.

[5] ¶ William Salesbury to the reader.

Possibly, gentle reader, it would not have been irrelevant to shew and declare what advantage, what gain and what profit, would result to any one, who should devote any time to reading and study-

ing this book, but that his majesty, the king, together with his council has received it, as an acceptable and suitable help and aid for the induction of the principality into the English language, and because the inclining of the

Authorisation of the book by the king, whose authority is from God.

heart of the king (as shewn by the holy scripture) is from God, who I pray may preserve his grace in long life prosperity and success. But now to come to the most important and necessary subject to be treated of in this place, that is, for the sake of Welshmen who do not possess more learning than the bare ability to read their own tongue, and of those only who may, as they ought, desire instruction in reading and understanding the English language, a language at present renowned for all excellent learning, full of talent and victory, a language moreover not difficult to learn, which persons of every nation acquire fluently, without regarding trouble and expense, and to Welshmen more necessary than to any other people, however much we may neglect it. For these untaught persons, then, so much elementary teaching was written, [6] and not for the well versed. But I desire of you who are possessed of higher attainments, and know how valuable is education, that you would after the manner of Saint Paul, make yourselves all things to all men, and condescend also (as the same Paul says,) since babes are fed with bread and milk, to feed the ignorant with the crumbs of your superior knowledge, and not with the excellency of high scholarship. And thus if you do not hide the treasure of the Lord, but dispense it as opportunity offers, by supplying it to those in need of learning and wisdom, and other like things, I trust God may grant to them such a spirit, that they may not like swine, trample your gems and precious stones

under their feet, and that they may not rise like dogs against you, ready to bite you. But now again to leave all digression and to begin to set forth the object and import of this book. Inasmuch as all the

every word (so far as memory served) was chased to its own proper position. Thus all the words having a for the first letter were at the outset collected into the same place. Then all words beginning with b were placed apart. So with c, and ch, and d. Thus also of all the rest, every word is ranged under the standard of its captain Thus when you require the English for any Welsh word; First observe what is the first letter naturally; The mode if it is a for example, look for the word under the of turning series a, and having found the word, in the opposite English to column for English you will get the English for it.

Welsh.

But be very careful not to be misled, to seek amiss a word out of its own proper place. For example, if you trace the words in the form and aspect in which they lie in the following line Mae i mi gangen dec o vedwen [Est mihi ramus pulcher betullae]. For it will not serve you to look for the English for gangen among words which begin with g, but under k, because the pure radical word is kangen not gangen, and the English meaning will be found opposite the radical word. For it is a peculiarity of the Welsh to soften the initial consonant, as k to g, t to d, b to v, in certain positions, as in the words dec o vedwon [ramus betullae]. Therefore you must always consider what is the initial letter when the word stands alone, out of connection, as I observed above. So it is in the normal natural utterance of the word that you are to seek, if you wish to find every word in this lexicon. For as none but an idiot would expect, [8] when going to gather osiers, to meet with rods growing in the form they are seen after being plaited round the frame-work of a basket, in the same manner none but an unskilful person will expect to find every word in the dictionary in the form and shape in which it is found when woven in the partition wall of a sentence. In addition to all I have already said observe this further direction, Advice to such of you, Welshmen, as desire to learn English Welshmen at your own firesides. You cannot fail to know that

in English they do not read and pronounce every word literally and fully as it is written. For example, God be with you, which the commonalty pronounce God biwio (God bii wijo). And a heap of other words also are written, as to some of their syllables in the same way, but are not pronounced in the same way, as the following: BOWE, CROWE, TROWE which are read bo (boo) bwa The following also have precisely the same termination as the above but are differently read, cowe, Lowe, Nowe, NARROWE, EPAROWE, which are usually spoken kow (kou) buwch [vacca], low Clou) lowio [mugire], now (nou) yn awr [nunc], narrw (naru) Lyfing [angustus], sparw (sparu) ederyn y to [passer]. With regard to such cases as the reader may find too difficult to remember, much less write, the best advice I have for such as may mot be able to go to England (as I have already said), where the

¶ The Alphabet of Capital letters.

ABCDEFGHIKLMNOPQRSTUX:

[11] The nature and sound of the above letters in English.

A in English is of the same sound as a in Welsh, as is evident in these words of English, ALE aal (aal) kwrw [cerevisia]; PALE paal (paal) [pallidus], SALE sal (saal) [venditio] (p. 61). Except sometimes A has the sound of the diphthong aw (au) especially when it precedes L or LL, as may be more clearly seen in these words: BALDE bawld (bauld) moel [calvus], BALL bawl (baul) pel [pila], WALL wawl (waul) gwal [murus] (p. 143, 194). But in certain words they place A sometimes, as we should consider it, rather carelessly according to our custom, out of its own power and rather metamorphosed into the vowel e, as EASE ces (cez) esmwythdra [otium], LEAUE leef (leev) kenad [venia, licentia], SEA see (see) mor [mare], YEA ie (see) [ctiam] (p. 80). But words of this kind will not often perplex thee, gentle reader.

B in English and b in Welsh have the same sound, as in these words: BABE baab (baab) baban [infans], BREDE bred (breed, bred) bara [panis]. And B in English is not changed for another letter as is done with b in Welsh.

C in reading English, as in Welsh, has the same sound, except before F, I, Y, for before these three letters it is sounded as s (s). For example FACE flus (faus) wyneb [facies], GRACYOUSE grasius (graa:si,us) rraddlawn [gratiosus], condicyon condisyon (kondis:iun) [conditio.]

Ch is not at all like in English and in Welsh. And there are not in Welsh any letter or letters which correctly represent it, but the sound of tsi (tsi, tsv) is as like it as brass is to gold, as in the following word CHURCHE tsurts (tshirtsh) solsis [ecclesia].

as may be understood in these words from the two languages: DUKE duck (dyyk) duc [dux], dart (dart) dart [jaculum]. But note this well when you see two do coming together in English, they have not the power of dd in Welsh (dh), but each retains its usual sound. And it does not soften, on the contrary it hardens the sound, as in the following words: LADDRE lad-dr (lader) yscol [scala], BLADD' blad-der (blader) chwyssigen [vesica]. D also is the termination of the perfect, imperfect, and pluperfect tenses, as in the word loved (luvd) carwn, kereis, carysswn [amabam, amavi,

amaveram].

E is pronounced in English sometimes as e Welsh (e), sometimes as i Welsh (i), and sometimes at the end of words, it is silent or mute as sheva in Hebrew, or as you see w at the end of these words in Welsh: kynddelio, ardelio, kefnderio syberio, buddelio, marionad, catuderw, in which the w is melted away in reading and speaking and so they are sounded kyndell, ardel, kefnder, syber, budel, marnad, catderw. Similarly E final in English words is melted away, for the most part, from the end of every word in pronunciation, as in the following words: EMPEROURE pronounced emperur (emperur), and not emperorey (emperouvrei) which word in Welsh signifies ymerawtr [imperator]. And so EUERMORE efermwor (evermoor, evermuur, evermwor) tragowydd [semper]. In the two English words above, the two first E, E, of each, has the same sound as the Welsh e or Latin e, or the Greek epsylon. And the final E is mute as w is in the words I have already mentioned. Moreover especially when E final follows L or r, [13] it is not heard from English But if it is heard at all, it is rather before the L or R than tongues. after, as they pronounce the following words: ABLE, SABLE, TWYNCLE, WEYNCLE, THONDRE, WONDRE, which words, together with others of the same termination, in hearing an Englishman read them, seem as if written without the E, thus: abl, sabl, twinkl, wrinkl, thwndr, wndr, (aab'l, saab'l, twiqk'l, wriqk'l, thund'r, wund'r), [potens, niger, scintillare, ruga, tonitru, miraculum,]; or as if the E were written before the L or R: thus SADDELL, THONDER (sad'el, thun'der), [ephippium, tonitru.] But such pronunciations ought not to be strange to us Welshmen, for do we not also in reading melt away two or three letters at times, as may be seen in the following: popl for popul [populus], kwbl for kwbwl [totus], papr and eithr, where we should say papyr [papyrus] and eythyr [sed]. But every tongue must be pardoned its peculiarities, and every language allowed its idioms. Further it is the nature of E final to soften and prolong the syllable which precedes it as: HOPE hoop (HOOP) gobeith [spes], BAKE baak (baak) poby [coquere panem ut pistor], CHESE tsis (tshiiz) caus [caseus]. But observe carefully the word CHESE, for the first E has the sound of i in our tongue, and the E final is mute as before described. E also before s at the end of plural nouns,-that is, (for the sake of the unlearned,) names which signify a number of anything, -disappears in pronunciation, as in the following: KYNGES, brenhinedd [reges], FRENDES kereint [amici], TENTES pepyll [tentoria],

which are read kings (kiqz), frinds (friindz), tents (tents). [14] And be it known to the reader that this rule does not apply to every plural, for when c, cH, c, or another E precedes the said E the rule fails, for then E is pronounced obscurely or as our y (i), as in the following dyches deitsys (deitshiz) flossydd [fossae], faces flaces (fassez) wyneben [facies], oranges oreintsys (or eindzhiz) afals orayds [aurantia], trees triys (triiiz) prenneu [arbores].

F in English has singly as much power as two Welsh f, f, with their heads pressed together, thus: Fole fiel (fuul), fol ne ynuyd

[stultus].

which has a lighter sound, as in CHEFE tsiff (tshiif) ponnaf [princeps]; FF hard as in SUFFEE stofffer (suffer) dioddef [pati].

G is sounded in English very similar to CH, so similar indeed that Englishmen not well educated write the one for the other, as in the word CHURGE for CHURCHE tsiurts (tshirtsh) eglwys [ecclesia]. But e in English before A, O, U, and sometimes before E or Y is not distinguished from g Welsh (g), thus GALAUNT galawnt (gal'aunt) [fortis] (p. 143), SELDING gelding (gelding) [canterius], PLACE plaag (plaag) pla [pestis], God (god) dyw [deus], GUTTE gwt (gut) coluddyn [intestinum], GYLBERT gilbert (gil'bert). But when e comes before E, I, or Y, it is sounded as CH in English, or as tsadde Y in Hebrew for the most part, as GYNGER tsintsir (dzhin'dzher) sinsir [zinziber]. Note well this again when two GG come together, they are sounded as one, like g Welsh, thus: BEGGYNGE begging (beg'iq) yn cardota [mendicans], NAGGE nag (nag) keffylyn [mannus], EGGE eg (cg) wy [ovum].

[15] Gh has the same sound as our ch, except that they sound gh softly, not in the neck, and we sound ch from the depth of our throats and more harshly (p. 210), and as it is disagreeable to the English to hear the grating sound of this letter so Welshmen in the South of Wales avoid it as much as possible. For you hear them say hwaer, and hwech (whair, whekh), where we in the North of Wales say chwaer, and chwoch (khwair, khwekh; kwhair, kwhekh?).

And still I find that even we often avoid pronouncing ch, as we prefer saying chwegwaith (kwegwaith) for chwechgwaith (kwhekh-gwaith) [sexies], and chwevgain(kwhei gain, kwhee gain?) for chwech gwaith (kwhekh yy gain) [centum et viginti]. And in my opinion the Greeks were not overfond of this sound when they transferred from the Hebrew, Iohannes instead of Iochanna, and Isaac for Iitschach. And in a similar manner the Latins had no great liking for the above letter, for they follow the Greeks in transferring from Hebrew, and say mihi and nihil for michi and nichil (mi hi ni ni ni mikh inikh il). But to conclude you may take this guttural as light in speaking English as you can.

H is precisely the same in English as in Welsh, as we see in HAVE haf (Hav) hode [accipe], HART hart (Hart) calon no carro [corvel cervus], HOLY holy (Hool'i, Hol'i) santaidd no kelyn [sanctus vel aquifolium]. But in some anglicized Latin words H is not sounded

16 I in their language is equivalent to the following two letters in ours ei (ei), but they are compressed so as to be pronounced in one sound or a diphthong, as in that word of theirs I ei (ei, ei) mi [ego] or myfi [egomet]. But when it is joined to another vowel it has the sound of a English, and as they are so near alike, I have met with some in hesitation and doubt, whether they should write certain words with I or with G, as the following: MAIESTIE, GENTYLL, GELOUSYE, and some writing HABREIOUNE and others HEBERGYN lluryg [lorica]. Thus I observe the same likeness between these three English letters cu, e, and I, as exists between pewter and silver, that at first sight they appear very like each other, but on close examination they differ. For example, IESU tsiesuw (Dzhee zyy) Iesu [Jesus], Iohn tsion (Dzhon) and sion [Shon] by corrupt pronunciation, and Iohannes] in pure Welsh, 10xxx tsioynt (dzhoint) kymal [junctura] (p. 131).

K has the same power in Welsh as in English, but it is not so frequent at the commencement of words as may be seen in the following: Boke book (buuk) llyfyr [liber], Bucke book (buk) booch [dama mas]: k at the beginning of words kynge king (kiq) brenhin

rex], KNOT (knot) kulum [nodus]; KENT.

L in the two languages does not differ in sound, as LYLY lili (lili) [lilium], LADY ladi (laa'di) arglwyddes [domina], LAD (lad) bachken [juvenis].

LI in English is nothing like in sound to our U (lhh), and our U will no foreigner ever learn to pronounce properly except in youth.

Le in English has no distinct name, it is simply called dwbyl ! (dubil el) or twofold L, and it has always the sound of l, or of lambda [17] before iota. But in some districts of England it is sounded like w (u), thus bowd (boould) for BOLD [audax], bw (buu) for BULL [taurus]; caw (kau) for CALL [voco]. (p. 194.) But this pronunciation is merely a provincialism, and not to be imitated unless you wish to lisp like these lispers.

M and N are of the same sound in the two languages (and indeed in every other language I know). In English they are

spoken thus man (man) gwr [vir], men (men) gwyr [viri].

O takes the sound of o (o) in some words, and in others the sound of w (u); thus to to (too) bys treet [digitus pedis], so so (soo) velly [sic], Two tw (tuu) dau [duo], To tw (tu) ar, at, i [ad], SCHOLE

scwl (skuul) yscol [schola]. (p. 93.)

O also before LD or LL is pronounced as though w were inserted between them, thus colde could (koould) oer [frigidus], Bolle bowl (booul) [crater], TOLLE towl (tooul) toll [vectigal] (p. 194). But two oo together are sounded like w in Welsh (u), as good gwd (gud, guud) da [bonus], Poore pur (puur) tlawd [pauper] (p. 93).

to ph.

But in English it has a permanent sound in every word as PAPYE papyr (pas-pir) [papyrus], PAPPE papp (pap) bron gwraic ne ywd [mamma vel infantium cibus], PENNE pinn yscrifenny [calamus]. And an Englishman pronounces the letter P thus, in the phrase and with a penne (and with a pen) ac a phinn [et cum calamo], and not with a PHENNE or FFENNE with double of (with a fen).

Q is a strange letter in Welsh, and scarcely more at home in English. It is the same in sound as k, [18] as quene kwin (kwiin) brenhines [regina], quarter kwarter (kwarter) chwarter [quarta pars]; quarte (kwail) sofyliar [coturnix]. And bear in mind that u is the companion of q, for q is never seen without u following

it, as the cuckoo without her screecher.

R is of the same nature in the two languages except that R is never doubled or aspirated at the beginning of words as in Greek and Welsh.

Rhoma, rrufain or rhufain [Roma], but English words beginning with R are thus pronounced: RYGHT richt (rikht) iaum [rectus], RENT ront (rent) [scissura], ROS (rOOZ) ros no rosim [rosa].

S in these languages is of the same sound, thus syr syr (sir) dominus], season seesyn (seez'in) amser amseraul ne amser kyfaddas tempestas, tempestivus vel occasio]. But when s comes between two vowels it has the flat sound, or it is lisped, thus muse muwos (myyz) meuyrio [meditari], mase maas (maaz) madrondot [stupor].

S when added to the end of a word in the singular, makes it plural, or to signify more than one, as hande hand (hand) is llaw una manus], handes hands (handz) are llawe ne ddwylo [plures vel duæ manus], nayle nayl (nail) ewin ne hoyl hayarn [unguis vel ferreus clavus], nayles nayls (nailz) ewinedd ne hoylion heyrn [ungues vel ferrei clavi], hayle rayl (rail) canllaw [cancellus], hayles rayls (railz) canllawen ne ederin regen yr yd [cancelli vel greces pratenses] (p. 119).

Sh when coming before a vowel is equivalent to this combination sei, thus shapp ssiapp (shap) gwedd ne bun [species vel forma],

SHEPE ssiip (shiip) dauad no ddeueid [ovis vel oves].,

SH coming after a vowel is pronounced iss, thus asshe aiss (ash, aish?) onnen [fraxinus]; wasshe waiss (wash, waish?) golchi [lavare]. And wherever it is met with it hisses, like a roused serpent, [19] not unlike the Hebrew letter called schin v. And if you wish further information respecting this sound, you should listen to the hissing voice of shellfish when they begin to boil. Take this as an homely illustration lest you may not all be able to find an English tongue at hand to instruct you.

T also shews the same face to an Englishman as to a Welshman, as TRESURE tresurer (trez'yyr) trysor [thesaurus], Toure towr (tour)

turris], Top top (top) nen [vertex].

Th in English rhymes with the same combination in Welsh (th), but in some words it reads flat like our dd (dh). Examples of the Welsh sound of th; through thruch (thrunkh) trywodd [per],

thystl yscall: Eglurwch am th/ val awn dd/ ni this ddys hwn/ hon/ ne hyn. velly ddym nine yn cam arfer yn sathredic o dd/dros th/ yny gair yma (ddialaydd) yn lle (dialayth) Nota hyn hefyd / y darlleant th / val t / yny geirieu hynn Thomas tomas: throne trwn pall-

vu. ac u, uwch i phen a wna thou ddow, ti ne tydi

THYSTLE thystl (this tl) yscall [carduus]. Examples of TH like our dd; THIS ddys (dhis) hun hon no hyn [hic hace vel hoc]. So also in familiar conversation we mispronounce dd for th in the word ddialaydd for dialayth [sine tristitia]. Observe also that they read TH as t in these words: Thomas tomas (Tomas), Theore trun (truun) pall [solium].

U consonant is not distinguished in power in Welsh and English, thus: vine voin (vein) gwin wyddon [vitis], vaine vayn (vain) gwythen no wac [vena vel vanus] (p. 119), veluer velfet (vel vet) melfet [holosericum]. But u vowel answers to the power of the two Welsh letters u, w, and its usual power is uw, as shewn in the following words true truw (tryy) kywir [verus], vertue vertuw (vertyy) rhinwodd [virtus]. And sometimes they give it its own proper sound and pronounce it like the Latins, or like our w, as [20] in the words bucke buck (buk) buch [dama mas], lust lust (lust) chwant [libido]. But it is seldom this vowel sound corresponds with the sound we give the same letter, but it does in some cases as in busy busi (biz:i) prysur no ymyrus [occupatus vel se immiscens] (p. 164).

W English and w Welsh do not differ in sound, as wawe waw (wau) tonn ar vor [unda maris] (p. 143), wyne wein (wein) gwin [vinum], wynne wynn (win) ennill [pretium ferre]. But the English name of this letter is dowbyl uw (dou'bil yy), that is double v. And the English in teaching children to spell, take it as a consonant, and not as a vowel, or w per se (u per see) as we take it. But still we use it in the most easy mode for youth learning to read intelligently.

Also w is mute at the end of words in English, as in the following AWE, BOWE, WOWE, which we pronounce thus: a (aa) ofyn [terror] (p. 143), bo (boo) bwa [arcus] (p. 150), w (uu, wuu?) kery [amare, ut procus petere].

X Neither is x much at home in English any more than in Welsh, and the sound is co (ks) or gs (gz) as in the words FLAXE flace (flaks) lim [linum], AXE ags (agz) bioyall [securis]. Latin words in their passage into English or Welsh exchange x for s, as in the words crux crosse cross, or orws, exemplum exampyl, extendo extennaf, excommunicatus excomyn.

Y often has the sound of the diphthong of (ei, oi), as THYNE ddin (dhein) tau no oiddot [tuus vel tibi], and its own sound as in the word THYNNE thynn (thin) tonou [gracilis] (p. 111).

y° with a tittle like a small e above makes the English, as r° man dde man (dhe man) y gwr [vir ille], x° oxe dde ocs (dhe oks) yr ych [bos ille].

yt with a small cross above it, is equal [21] at full to THAT ddat (dhat) hyny ne yr hwn [ille vel qui].

y" with u above it, signifies THOU ddow (thou) ti ne tydi [tu].

 Y, The old English writers had a letter b very much like y, only that the stem was not curved upward as a scythe like the stem of the y, and it is not unlike in shape to the Roman x or the Greek specien T, or the Hebrew ghayn y, and as near as I can remember, an old English reader once called the name of it ddorn (dhorn), and he pronounced it like our dd (dh) or like the Greek delta δ (dh). But it is not in use among the English since the art of printing was introduced, but x is sometimes used for it, and sometimes x. And on this account it is more difficult for a stranger to pronounce their x in English, because it serves sometimes the place of the letter they call x ddorn (dhorn), as may be noticed in the foregoing remarks. So that when that effeminate lisping letter was lost from the English, it was introduced to us the Welsh, and we commenced lisping like nursing women, and to say x (dh) for x (dh), x (th) for x (t), and x for x for x the length of this digression of speech, and I will bring my remarks respecting the other letters sooner to a close.

Z was also frequently used instead of s at the end of words as EXNGEZ kings (kiqz) bronhinedd [reges]. Some also used it for m, and others (which was more contrary to nature) for en in the words EXZI richt (rikht) kyfiason [rectus], ENYZI knicht (knikht) marchaeg orddol [eques].

&. This is not a letter but an abbreviation for a whole word as may be seen from the following [22] how frequently it is used in every language. When written in full it is et in Latin, and in English, so in Welsh.

¶ The table below gives a summary and the substance of all the above rules: and therefore it was not considered necessary to give more explanation or instruction respecting it to any one desirous to read the book from beginning to end.

¶ Or like this.

INDEX TO THE ENGLISH AND LATIN WORDS OF WHICH THE PRONUNCIATION IS GIVEN OR INDICATED IN SALESBURY'S TWO TRACTS.

In the following list the words quoted from the Treatise on Welsh pronunciation are given in italics, followed by the old spelling there used by Salesbury in small capitals, and the pronunciation indicated. In that treatise the pronunciation is seldom or ever explained in Welsh letters, but some important part of it is indicated, and the rest has been added from conjecture. The numbers which follow give the pages in this work where the word is referred to, (the small upper figure being the number of the footnote,) the bracketed numbers the page of the tract as here printed, and the capitals the letters under which the words occur.

The words quoted from the Treatise on English pronunciation are in Roman letters, followed by the old spelling in small capitals, the Welsh transliteration in italics, the palaeotypic pronunciation in (), the Welsh interpretation in italics, and its translation into Latin in [], and finally references as before.

Latin words are distinguished by a prefixed †.

§ 3. John Hart's Phonetic Writing, 1569, and the Pronunciation of French in XVI th Century.

Since the account of John Hart's Orthographie (p. 35) was in type, the original manuscript of his "former treatise," bearing date 1551, has been identified in the British Museum, and some account of it is given in the annexed footnote. It may be observed that

1 Mr. Brock, who is ever on the look out for unpublished treatises interesting to the Early English Text Society, called my attention, through Mr. Furnivall, to the MS. Reg. 17. C. vii., which was described in the printed catalogue of those MSS. as "John Hare's Censure of the English Language, A.D. 1551, paper." It is a small thin quarto of 117 folios, the first two pages not numbered, and the others paged from 1 to 230, 19 lines in a page, about 7 words in a line, in a fine English hand of the xvi th century, carefully but peculiarly spelled, by no means according to Hart's recommendations. The Latin quotations are in an Italian hand. It was labelled on the back "Hare on the English Language." Being desirous of getting at the author's account of our sounds, when I examined the MS, on 28 Oct. 1868, I skipped the preliminary matter and at once attacked the 6th and 8th chapters; "Of the powers and shaping of letters, and first of the voels," and "of the affinite of consonants." I was immediately struck with many peculia-rities of expression and opinion which I was familiar with in Hart's Orthographie, and no other book. On turning to the dedication to Edward VI., I found (p. 4, l. 8,) the name of the author distinctly as John Hart, not Hare, although the t was written so as to mislead a cursory reader, but not one familiar with the handwriting. Then,

similarly, in Hart's Orthographie the author's name is mentioned in the dedication: "To the doubtfull of the English Orthographie John Hart Chester heralt wisheth all health and prosperitie," which had not been observed when p. 35, 1. 20, was printed, and not on the title. On comparing this printed book with the MS. I found many passages and quotations verbatim the same; see especially the first chapters of the MS. and printed book "what letters ar, and of their right use," where right is not in the MS. The identity was thus securely established, and the MS. has consequently been re-lettered: "Hart on English Orthography, 1551."

The title of the MS. is: "The Opening of the unreasonable writing of our inglish toung: wherin is shewid what necessarili is to be left, and what folowed for the perfect writing therof." And the following lines, on the fly leaf, in the author's hand-writing, seem to shew that this first draught, thus curiously brought to light after 317 years' repose, was never intended for publication, but was perhaps to be followed by another treatise, which was of course the printed book.

"Abuse," meaning the wrongful use of letters, that is applying them to sounds for which they were not intended in the Latin alphabet, is a favourite term of Hart's, and with the curious orthography voel for vowel, led me to suspect the real author from the first. The following description of the vowels is slightly different from, and must be considered as supplementary to those given above in the pages hereafter cited; the bracket figures give the pages of the MS. A few remarks are

also inserted in brackets.

"[77] Lett us begin then with an opened mouth so mouch as a man may (though lesse wold serve) therwith sounding from the breast, and he shall of force bring forth one simple sound which we mark with the a (p. 63); and making your mouth lesse so as the inner part of your toung may touch the lyke inner part of your [78] upper lowes you shall with your voice from your brest make that sound wherfore we doo often (and shuld alwais) writ the e (p. 80): then somthing your toung further furth with your iowes, leaving but the forepart open, and your sound from the brest wil make the voice wherfore we doo often (and shuld alwais) write the i: forthli a man making his lippes in souch a round, as the compasse of the topp of his litell finger (his teeth not touching, nor toung the upper lowes) with the sound from the brest he shall make the simple

voice wherefore we doo often (and shuld alwais) writ the o (p. 93); and last of all holding so stil his toung and teeth untoucht shrinking his lippes to so litell a hole as the breath may issue, with the sound from [79] the breast he shal of force make that simple voice wherefore we doo sometimes rightly (and shuld alwais) write the u [certainly (u) here]. . . [81]. Now as for the a, we use in his proper power as we ought, and as other nations have alwais doone (p. 63). But I find that we abuse all the others, and first of the e, which most communely we use pro-perly; as in theis wordes better and ever; but often we change his sound making yt to usurp the power of the i, as in we, be & he (p. 80), in which sound we use the i properly: as in theis wordes sinne, in and him. Wherefore this letter e, shuld have his auncient sound as other nations use yt, and which is as we sound yt in better and The profit thereof shuldbe, ever. that [83] we shuld not feare the mystating of his sound in i : as we have longe doon: and therfore (and partly for lak of a note for time) we have communely abused the diphthongs ey or ei, ay or ai and ea: to the great increase of our labour, confusyon of the letters, in depriving them of their right powers, and uncertainte to the reader. In this book Hart proposes either the circumflex or reduplication as the mark of quantity]. For the voel e, doeth of voice import so moche in better and ever and in mani other wordes and sillables, as we do communely use to pronounce the diphthongs ey or ei, ai, or ay, or the ea, except yt be when they are seperate and ire from diphthong whiche to signifie we ought to use an accent as shalbe said. [He proposes the hyphen.] Then the i, we abuse two wais: the first is in that we geve it a brode sound (contrary to all peoples but the Scotts: as in this sentence, [83] he borowed a swerd from bi a mans side to save thie life: where we sound the i in bi, side, thie and life as we shuld doo the ei diph-thong . . . The other ab-[84]-use of the i, is that we make yt a consonant This pronunciation cannot have been in all respects the prevalent and received pronunciation of his time, for Hart frequently disagrees with Palsgrave, Salesbury, Smith, and Bullokar, and Dr. Gill

without any diversifiyng of his shape from the voell . . . [86] The forth now is the o, whose abuse (for that it cometh onli by leaving the proper use of the u) causeth me to speak upon the u. We abuse [87] the u, two wais the one is in consonant indifferentli with bothe his figures u and v.... [88]. The other abuse of the u, is that we sound yt as the Skottes and French men doo, in theis wordes gud and fust [89]: Wheras most communely we our selves (which the Grekes, Latines, the vulgar Italiens, and Germaines with others doo alwais) kepe his true sound: as in theis wordes, but, unto, and further. [This thoroughly excludes all suspicion of an (a) sound.] Yf you marke well his uzurped sound in gud and fust (and others of the Skottish and french abuse) you shal find the sound of the diphthong iu, keping both the i and u, in their proper vertu, both in sound and voel, as afore is said we ought: sounding yt in that voice wherefore we now abuse to write, you." The identification with the French and Scotch sounds ought to imply that that long u was (yy), but its dentification with you makes it (Ju); Hart however, in his orthographie also rises (iu) for both sounds, as in the passage reprobated by Gill, suprà p. 122, where he writes you use as (iu iuz); yet if any value is to be attributed to his description of long u, suprà p. 167, he certainly meant (Ju yyz) and it was only his notation which led him into an ambiguity which also deceived Gill. But here it is evident that he had not yet heard the difference between yew, you, which Sir T. Smith writes (yy, iu), p. 166. This therefore may be a case of education of the ear. He asks now: "What difference find you betwixt the sound of you, and u in gud and fust? Where-fore yf our predecessours have thought it necessari to take three voels for that voice, which in another place [90] they (observing derivations) writ with one, there appeareth to be a confusion and uncertainte of the powers of letters, as they used theim. Lett us then receive the perfet meane betwixt theis two doubtfull extremities; and use the diphthong in alwais for the sound of you, and of u in suer, shut & bruer, and souch lyke, writing theim thus shiut, siuer, briuer:" does the word shut shiut mean suit or shoot? see suprà p. 216, n. 1, "wherefore in our writings we nead carefulli to put a sufficient difference, betwixt the u and n: as theis and the printes geve sufficient example. Now see you whether we doo well to writ the o in theis wordes do, to & other (signifying in latine alius) when yt ys the proper sound of the u; or for [91] the lyke sound to dooble the o: as in poore, good, root, and souch like of that sound: but I find the same dooble o, writen with reason in some wordes, when yt signyfieth the longer time: as in moost, goost and goo. . . [95] Then the nombre of our voels is five as the Grekes (concerning voice) the Latines, the Germaines, the Italiens, the Spayneyardes and others have alwais had, declared in souch their singuler power, as they have and doe, use theim. . . [96] a diphthong is a joining of two voels in one syllable keping their proper sound, only somewhat shortening the quantite of the first to the longer quantite of the last (p. 132): which is the onli diversite that a diphthong hath, from two voels commyng together yet serving for two syllables, and therfore ought to be marked with the figure διαίρεσις, as shalbe said." Among the diphthongs he places first y considered as Greek vi, and recommends its disuse, and then w considered as uu, for which he would write u. [101] "Wherefore we take the u single to have so moch power as the w: for this figure u, shall not (or ought not) henceforth be abused in consonant, nor in the skottish and french sound. Then may we well writ for when, writ and what, thus huen, urit and huat; and so if their lyke, cleane forsaking the w. Now the ea, so often as I see yt abused in diphthong, it is for the sound of the long e: wherin is the necessite spoken of, for the use of a mark, for the accident of longer time (as hereafter shalbe said) for that the sound e length-[102]-ned wil serve for the commune abused diphthongs ea. ai or ay and ei or ey (p. 122): the powers of which voels we now myx together con-

especially reprobates his pronunciation in many particulars (p. 122). Still we can hardly refuse to believe that Hart tried to exhibit that pronunciation of which he himself made use, and which he conceived to be that which others either did or should employ. Moreover his work contains the earliest connected specimen of phonetic English writing which I have met with, as Palsgrave, Salesbury, and Smith only gave isolated words or phrases. Although Hart's book has been reproduced by Mr. Isaac Pitman, the ordinary spelling in phonetic shorthand, and the phonetic portion in facsimile writing (with tolerable but not perfect accuracy), yet as many persons would be unable to read the shorthand, and would not therefore obtain a proper knowledge of the meaning of the other portion, and as it is desirable, also, to reduce all these phonetic accounts of English spelling to the one standard of palaeotype for the purposes of comparison, I have thought it best to annex the whole of the last Chapter of Hart's book, according to my own interpretation. This Chapter gives Hart's notions of contemporary French pronunciation, a subject which has been already so much alluded to in Chap. III., that the remainder of this section will be devoted to it. Hart does not admit of (w, J) but uses (u, i) for them, even in such words as which, write, which he exhibits as (muitsh, ureit). I have elsewhere restored the (w, J) which were certainly pronounced, but in this transliteration it seemed best to follow him exactly in the

fuzibli making the sound of the same long e, and not of any parfait diph-thong: as in their examples of the ea in feare which we pronounce sounding no part of the a. And for the ai or ay, as in this word faire pronouncing nether the a, or i, or y: also yn saieth where we abuse a thriphthong. Also ei or ey we pronounce not in theis wordes theine and theym, and souch lyke: where we sound the e long as in all the others. Now for the ee, we abuse in the sound of [103] the i long: as in this sentence, Take heed the birdes doo not feed on our seed: also for the ie in thief and priest: in likewise for the eo, as in people, we onli sound the i long. We also abuse the eo in the sound of the u voel as in icoperdi, which we pronounce inperdie. The oo we have abused as afore is said Now lett us understand how part of this foresaid and others shall serve us, and doo [104] us great pleasure: even as roules becessari for us lykely to contrefait the image of our pronunciation. First the au is rightly used (p. 144), as in paul and lau, but not law. Then the ua, is wel used in uarre, for warre: and in huat for what. Further the ei, is well and properli used in bei for by: in leif, for lyfe: and in seid, for syde (p. 113). Also eu, we use properli in feu for few: în deu, for dew, and souch lyke (p. 138). The ue, as in question: in huen, for when: in uel, for well. Also the iu as in triuth, for trueth: in rebiuk, for rebuke: and in riule for rule. And the ui alone for our [105] false sounding of we; and as in huich for which: uitness for wittnesse, and souch like: [this he identifies with Greek vi] . . . [106] writ for young, yoke and beyond, iong, ioke, and beiond. Then the oi is wel used in appoint, enjoi, poison, and a hoi barke, here there is a difference from his later orthography (nuci) (p. 132)]. And not to be over tedious, we use aright this diphthong ou in house, out, our and about (p. 152): wherein we may perceive how we have kept the auncient power of the u: the same diphthong ou, being sounded farre otherwise then in bloud, souch and should, as some ignorantii writ theim, when we pro-nounce but the u, in hyr proper sound." This use of ou for (u) is frequent in this MS. souch, toung, mouch, being common forms. The above extracts common forms. The above extracts seem to possess sufficient interest to admit of reproduction, but the work itself is entirely superseded by the later edition.

use of (u, i). Hart also systematically employs (iu) for long u, but, as I have already pointed out (p. 167) and as will appear in the course of this example, he meant the French u=(yy), and I have therefore restored that orthography, to prevent ambiguity. Where however in clearly meant (su, i,u), the latter forms are used. Hart does not mark the place of the accent, but uses an acute accent over a vowel occasionally to mark that it was followed by a noubled consonant in the old orthography. This acute accent is retained, but the position of the accent is marked conjecturally as usual. Hart uses a dash preceding a word to indicate capitals, thus /italian; I give the indicated capital. His diæresis is represented by (,) as usual. There are, no doubt, many errors in the marking of long vowels, which were indicated by underdotting, but I have left the quantity as I found it. The (s, z) are also left in Hart's confused state. As I can find no reason for supposing short i to have been (i) in Hart, although I believe that that was his real pronunciation, I employ (i) throughout. frequent foreign words, and all others in the usual spelling, are printed in italies. The foreign words serve partly to fix the value of Hart's symbols.

¹ As the pronunciation of Italian has been often referred to, and as H. I. H. Prince Louis Lucien Bonaparte has lately given me his views upon some points of interest in Italian pronunciation, it seems convenient to make a note of them in this place. The medial quantity of Italian vowels has already been noticed (p. 518 and n. 1). The vowel s has two sounds (s) close and (z) open, the intermediate (e) being unknown, whereas it is the only s in Spanish. The vowel s has also two sounds, which have in this work been hitherto assumed as (sh) close and (o) open. The prince does not allow this; to him (sh) is Swedish s long, and (o) is Spanish s. His Italian close s does not differ from (s), and his open s is (s) or (s), probably the former. His theory is that when a language has only one s, s, as in Spanish and modern Greek (suprà p. 523, l. 6

from bottom), Welch, and therefore in Latin and early English, it is (e, o); when it has two e, and two o, they are (e, E) and (o, o) respectively. Again in the pronunciation of the consonants in Italian, the Prince distinguishes, an emphatic and a weak utterance. The former is usually written double, but, he insists, is not pronounced double, in the sense of p. 55, but only emphatic, as if preceded by the sign (.) p. 10,—which has been wrongly used (pp. 4, 9) in the combinations (.t, d) in place of (t\(\frac{1}{2}\), d\(\frac{1}{2}\)), or "outer" (t, d). The following are the rules he lays down in his Sardo Sassarese example (suprà p. 756, n. 2, col. 2), which it is best to give in his own words (ib. p. xxxv). "Si dice spesso, poichè le consonanti scempie si pronunziano, tanto in italiano quanto in sassarese, come se fossero scritte doppie, in forza delle seguenti regole generali:

For dhe нін dutsh dhee sound aul dheer vo elz in dhe ver'i saam sort: and nev'er maak dhe i, kon sonant, nor abyyz dhe g, befoor dhe e, and i, az dh-Italian duth, but kiip it aul uez befoor dhem, az

1) Allorchè, essendo iniziali, vengono in principio di frase, sia al cominciar di un periodo o di una clausula benchè breve, sia dopo una virgola. 2) Allorchè, cominciando la sillaba, sono precedute da altra consonante, 3) Allorchè occorono in fin di voce, come ne' monosillabi il, del, &c. 4) Quando la voce precedente, benchè terminata in vocale, sia un ossitono oppure un monosillabo derivato da voce latina terminata in consonante, la qual consonante poi venne soppressa nel farsi italiana o sassarese detta voce latina. Così la preposizione a derivata dalla latina ad, la congiunzione e corrispondente ad et, il si derivato dal sic, il "nè" nec, le parole tronche come "amò" amavit, "potè" potuit hanno tutte la proprietà di dar pronunzia forte alla consonante iniziale della voce seguente; ed avvegnachè si vegga scritto: a Pietro, e voi, sì grande, nè questo nè quello, amò molto, potè poco, non si ode altrimenti che: appietro, evvoi, siggrande necquesto necquello, amommolto, poteppoco. Il suono debole delle consonanti, all' incontro, avrà luogo quando la voce che le precede si termina in vocale, eccettuati i casi notati nelle regole che precedono. Così in: di Maria, i doni, la mente, le donne, mi dice, ti lascia, si gode, ama molto pote' poco, molto largo, le consonanti iniziali della seconda voce si pronunziano deboli quali si veggono scritte, per essere le parole latine correspondenti alla prima voce: de, illi, illa, illæ, me, te, se, potui terminate in vocale, oppure perchè, come in ama molto e multo largo, le voci ama e molto non ricevon l'accento tonico in sull' ultima sillaba." Compare the double Spanish sound of r, suprà p. 198, n. 2. This emphatic pronunciation, in the case of (p b, t d, k g) consists in a firmer contact and consequently a more explosive utterance of the following vowel; in the case of (f, v, s) &c., in a closer approximation of the organs and a sharper hiss or buzz. But in Sardo Sassarese, the weak pronunciation generates new sounds, weak (p, t, k, v) becoming (b, d, g, bh). The Prince was also very particular respecting the pronunciation c, g, z in ce, gia,

zio, zero, which have been assumed in this work to be (tsh, dzh, ts, dz) respectively, forming true consonantal diphthongs, the initial (t, d) having an initial effect only (supra p. 54, l. 20). The Prince considers them all to be simple sounds, capable of prolongation and doubling, and he certainly so pro-nounced them. Sir T. Smith, and Hart both used simple signs for (tsh, dzh), Gill used a simple sign for (dzh) but analyzed it into (dzs). Hart, however, seems to have considered (tsh) as simple, but his words are not clear. The effect of the simple sound used by the Prince, was that of (t*sh, d*zh, t*s, d*z), that is an attempt to make both pairs of effects at once. This results in a closer and more forward contact, nearly (shf, zhf, sf, zf) but the (t*s, d*z) did not resemble (th, dh). This effect may be conveniently written (4sh, 4zh, 4s, 4z). The effect of (4sh, 4zh) on English ears is ambiguous. At one time it sounds (sh, zh) and at another (tsh, dzh), with a decided initial (t, d) contact as we pronounce in English, and the Prince again hears my (tsh, dzh) as his (4sh, 4zh). It would almost seem that (4sh, 4zh) were the true intermediate sounds between (kj, gj) and (tsh, dzh). But a Picard variety of (kj, gj) which may for distinctness be written (kj, gj) is a still more unstable sound to foreign ears. In precisely the same way (k s, k sh) may be produced, the tongue being more retracted and the tongue closer to the palate than for (s, sh). In the Sardo Tempiese dialect (k*sh) occurs and is written ke. These sounds may be written (ys, ysh) in imitation of (as, ysh). Was the Attic initial &, replacing \(\sigma\), really (ys), and the original Sanscrit \(\sigma\) (ysh)? The double contact of tongue and lips, which probably occurs in African dialects may be (xp, 4p), as slightly different from (kss, tw). The sibilants may now be greatly multiplied. The prince pronounced the following: (s z, sh zh; si zi, sh zhj; 4s 4z, 4sh 4zh; 4sj 4zj, 4shj 1zhj) all as simple sounds. Emphatic pronunciation, simultaneous pronunciation, and successive pronunciation still require much consideration and practical

observation of existing usages. The difficulty in separating the usual speech habits of the listener and speaker, and of not assuming the first to be a correct account of the second, is more and more felt as the knowledge of the phonetic process increases. We have as yet necessarily given an undue amount of consideration to analysis, in order to ascertain the elements of speech, to the neglect of the important study of synthesis, whence alone can result the proper conception of national speech with its whole array of legato, staccato, phonetic assimilation, phonetic disruption, stress, intonation, quantity, emphasis of letter, syllable, word, of the

utmost importance to comparative philologist, and almost totally unknown to

comparative philologists.

denies that (v, dh, z) occur in Spanish, but admits (f, th, s), as sounds of f, z, (or c before e, i,) and s. This pronunciation of c, z is doubtful. It may be $(s \nmid)$, and certainly by some d is pronounced either (dh) or $(z \nmid)$, especially when final. In the common termination -ado, the d is often quite lost, but the vowels are kept distinct in two syllables, and do not form a diphthong. In the termination -ido, the d is never lost. The (s) sound of c, z, is not acknowledged in Madrid. The letters b, v are pro-

nounced alike and as (bh). The j is by some said to be a peculiar guttural, but the Prince identifies it with (kh). Ll, \(\bar{n} \) are (lj, nj). Hart confuses \(\bar{u} \) with Welsh \(\bar{u} \), as does Salesbury, (suprà p. 757), but Hart also confuses the sound with ('l), or \(\bar{u} \) in \(abb \) (suprà p. 195); which he probably called (aa'blh) as in French (suprà p. 52). There seems to be no foundation for supposing that Spanish \(u \) was ever (y), as stated by Hart.

ALEXANDER BARCLEY'S FRENCH PRONUNCIATION, 1521.

In the introductory Authours Epistell to the Kynges Grace, prefixed to Palsgrave's Esclarcissement, he says: "Onely of this thyng, puttyng your highnesse in remembraunce, that where as besydes the great nombre of clerkes, whiche before season of this mater have written nowe sithe the beginnyng of your most fortunate and most prosperous raigne," that is, between 22 April 1509 and 18 July 1530, "the right vertuous and excellent prince Thomas late Duke of Northfolke, hath commanded the studious clerke Alexandre

¹ Further on he is not so complimentary, as he remarks: "Where as there is a boke, that goeth about in this realme, intitled the Introductory to writte and pronounce frenche, compiled by Alexander Barcley, in whiche k is moche vsed, and many other thynges also by hym affirmed, contrary to my sayenges in this boke, and specially in my seconde, where I shall assaye to expresse the declinations and conjugatinges: with the other congruites observed in the frenche tonge, I suppose it sufficient to warne the lernar, that I have red over that boke at length:

For the last treatise, see supra p. 31. The second I have not seen. A copy of the first, which is extremely rare and does not seem to have been known to A. Didot, as it is not found in his catalogue, (see p. 589, n. 1), exists in the Douce Collection at Oxford (B 507) and the following are all the parts in it relating to French pronunciation, according to the transcription of Mr. G. Parker, of Oxford, who has also collated the proof with the original. The whole is in black letter; size of the paper 101 in. \times 7 in., of the printed text $8\frac{1}{4}$ in. \times $5\frac{1}{4}$ in.; 32 pages, neither folioed nor paged, the register at bottom of recto folio is: A 1-6, B 1-6, C 1-4. In this reprint the pages are counted and referred to, as in the editions of Salesbury. The pages are indicated by thick numbers in brackets. Remarks are also inserted in brackets. The / point is represented by a comma. Contractions are extended in italics.

The copy he refers to belonged to Mr. Reed of Staple's Inn, then to the Marquis of Blandford (Catalogus librorum qui in Bibliotheeâ Blandfordiensi reperiuntur, 1812, fasc. 2, p. 8) and was sold by auction at Evans's sale of White Knights Library 1819, to Rodd the bookseller, for 94. 15s., after which I have not been able to trace it, but Mr. Bradshaw says it is only a reprint of a work of Caxton's (The Book of Travellers, Dibdins Ames, 1, 315, 316), containing French phrases, but no information on pronunciation. A mutilated copy of Caxton's book is in the Douce Collection.

Compare Palsgrave's Introduction to his second Book: "In the namyng of the sayd consonantes the frenche-men diffre from the latin tong, for where as the latines in soundynge of the mutes begyn with the letters selfe and ende in E, sayng BE, CE, DE. &c. the frenche men in the stede of E sound Oy and name them Boy, Coy, Doy," etc. Hence the oy in these words was not (ee) as it has now become. Palsgrave adds: "and where as the latines in soundyng of theyr liquides or semi vowelles begyn with E. and ende with them, saynge El. Em, En, the frenche men double the liquide or semi vocale, and adde also an other E and name them Elle, Emme, Enne, geyung the accent upon the fyrst E, and at the last

² This must surely be a misprint. The dots are faint. The vowel s does

not occur in this alphabet.

This explanation of aspiration, renders the real sound of h doubtful; as to whether it was (μ) or (,) as at present. The following quotations from a French newspaper, contained in the Daily News, 14 Sept. 1869, illustrates this modern use. "L'H est-il aspiré dans Hugo? Faut il dire Victo Rugo ou Victor Ugo? Il me semble, moi, que l'aspiration serait plus respectueuse." Observe that no H is written in either case, but that the running on of the R, or the hiatus before U alone mark the absence and

The other .xvi. letters called be consonantis: for they be soundyd with the vowels and make no syllable nor worde by them selfe excepte they be joyned with some vowel. consonantis be these.

b. c. d. f. g. k. l. m. n. p. q. r. s. t. x. z.

These consonantis be deuydyd agayne into mutes liquides and semy vowels of whom nedyth not to speke for our purpose. A dyptonge is a joynynge to gyther of .ii. vowels kepyng eche of them his strength3 in one self syllable: of them be .iii., that is to say, au, eu, ei,4 oy. In latyn tunge ,au, and ,eu be bothe wryten and sounded and englysshe tunge bothe ay oy au and eu be wryten and sounded,6 as in these examples in frenche of au. voycy vng beau filz, here is a fayre sone. of eu, deux homes font plus que vng: two men dooth more than one. of ay, ie ne diray point ma pencee a toutz gentz. I shall not tell my thought to all folkes. oy as, toy meimes ma fait le le tort. thy self hast none me the wronge. That the same dyptonges be both wryten and sounded in englysshe it appereth by the examples. As a maw, strawe, tawe, dewe, sewe, fewe. fray, say, may, pay. noy, boy, toy, ioy. And thus have we more lyberte bothe in frenche and englysshe in

presence of aspiration. And this may have been Barcley's meaning. But

see infrà p. 809, l. 4.

1 The pointing is evidently wrong. There should be a period here, and the colon after "vowels" seems incorrect. The expression "lytteral voyce" is, even then, rather obscure.

² Compare Salesbury's explanation of the consonantal value of i, u, supra

p. 754.

This ought to mean that the sound of each is heard, and ought to distinguish real diphthongs from digraphs. But the author so little understands the nature of speech that he may merely mean that the two letters being juxtaposed modify each others signifi-cation, producing a tertium quid. The Lambeth fragment (suprà p. 226, n. 1), gives 3 syllables to aider, aucun, 5 to

meilleur, 4 to eureux, which would all agree with a real diphthongal pronunciation, but then it proceeds to give 3 syllables to ouir, in which there can be no doubt that ou was a digraph.

4 The omission of ai is very remarkable. But from what follows it can hardly be doubted that ai was included under ei, or that ei was a misprint

for ai.

5 This ought to imply that Latin au, eu, were then called (au, eu), and this would agree with other indications

of English contemporary pronunciation.

6 As we know from Salesbury that about 30 years later English ay, oy, au, were called (ai, oi, au) at least in some cases, these words ought to imply that they had the same sound in French. This would agree at any rate with Palsgrave.

wrytynge and soundynge than in latyn as touchynge the .iiii.

dyptonges.

Also here is to be noted that of lettres we make syllabes: of syllabes we frame wordes, and of wordes we combyne reasons, and by reasons all scyences and speches be vttred. thus resteth the grounde of all scyences in lettres, syllabes, wordes, and reasons. Wherfore (as of the fyrst foundacyon of frenche tunge and also of all other langages) fyrst I intende by the ayde and socour of the holy goost to treate how the lettres be wryten and sounded in frenche.

¶ Of the soundynge of this lettre .A. in frenche.

This lettre .A. in frenche somtyme is put onely for a lettre. And somtyme it is put for this englysshe worde, hath. Whan it is put but for a lettre it is often sounded as this lettre e. as in this frenche worde, staues vous: in englysshe, can ye. In whiche worde and many other as, barbe, and rayre. with other lyke this lettre. A. hath his sounde of this lettre .e. But in some countrees A. is sounded with full sounde in lyke maner as it is wryten as. rayre, and suche other whan this lettre .A. is put for a worde it betokeneth as moche in englysshe as this worde hath. But some frenche men than adnex .d. withall as, ad. as il ad, he hath. But suche maner of wrytynge is false. for this lettre. d. is not sounded nor pronounced in frenche, nor founde often wryten in the ende of ony worde. And though some wolde say in these frenche wordes, viande, meate. demande, enquyre or aske. and that .d. is sounded in ende of the worde, it is not so, for in these wordes and other lyke, suche as truly pronounce frenche resteth the sounde on the last letter of the worde whiche is .e. and not .d.

[10] ¶ Also in true frenche these wordes, auray, I shal haue. and, auroy, I had: be wryten without e in myddes of the worde, and in lykewyse be they sounded without, e but in certayne countrees of fraunce in suche maner of wordes this lettre e is sounded and wryten in the myddes as thus, aueroy, aueroie: whiche is contrary bothe in the true wrytynge, and also to the true

pronuncyacion of perfyte frenche.3

¶ How this lettre b ought to be wryten and sounded in frenche

themperour for the emperoure, and so of other lyke.

Also this worde auec may be wryten in dyuers maners after the custome and vsage of dyuers countrees of fraunce as thus. auecques: sueque. And some without reason or ortography wryte it with .s. in the myddes as auesque, but how so euer aueque be wryten in frenche it soundeth as moche in englysshe as this preposycyon with. And also this worde solone may be wryten with c, or els without c

3 In this case probably a preserved its consonantal power, the remnant of the Latin b.

¹ The words stares rous are not clear. The use of a in the sound seems to be dialectic in barbe, see the quotation from Chevallet, p. 75, at bottom. But in rayre, (which ought not to be rare, but the book is so full of errors that it may be,) to scrape or shave, the remark seems to imply ay =(ee).

² Implying, of course, that the final e, now mute, was then audible, but only faintly audible, or else the error which he combats, could not have arisen.

at the ende as solone or solon, but than o ought not to be sounded, yf a consonant immedyatly follows.

Then follow the headings, Of Nombres, in one paragraph, and

Of Gendres, in four paragraphs, the last of which is:

¶ Many mo rules be concernynge wrytynge and spekynge of frenche, which were to longe to expres in this small treatyse: but the moste perfytenes of this langage is had by custome and vse of redynge and spekynge by often enquyrynge: and frequentynge of company of frenchemen and of suche as haue perfytenes: in spekynge the sayd langage.

[11] [Treatyse of dynerse frenche wordes after order of the Alphabete A. B., and then on I. 8 from bottom the author proceeds

thus

¶ This lettre. B. set in the myddes of a frenche worde ought to be soundyd in maner as it is wryten, as debriser. to bruse, troubler. to trouble, but in these wordes folowynge .b. is wryten in the myddes and not soundyd as, debte. dette, endebter. desoubz. vnderneth, desubz. aboue, coubte. a ribbe, vng subget. Also these verbes doubter to dout, tresdoubter greatly to dout, substiner with all theyr modes and tensys as well synguler as plurell with all nownes and particyples descendynge of them, must have .b. wryten in the myddes of them and not soundyd, as wryten doubte tresdoubte. and soundyd doute, and tresdoute.

[12] Of. C. ¶ This letter .C. wryten in myddes of a worde hathe somtyme the sounde of this letter .s. or .z. as these wordes. ca. on this half, pieca. a whyle agone. rancon a ranson. francois. frenche, and in many other lyke wordes whiche soundyth thus with .s. sa piesa ranson francois. Also this letter .c. somtyme hath the sounde of .k. as in these wordes in frenche crou. cru. cause, and car. Also these wordes done and iouc are wryten with .c. in the ende in synguler nombre, but in the plurell nomber the .c. in them

is tournyd in to .x. as doux ioux.

Of. E. ¶ E. for the moste parte is soundyd almost lyke .a.¹ and that namely in the ende of a worde, as in this example, A mon premier commencement soit dieu le pere omnipotent. At my fyrste begynnynge be god the father almyghty. Il a vng bon entendement, these wordes commencement omnipotent entendement vent with other lyke, be soundyd with a, as commencement, omnipotant, antandemant vant and other lyke, and all suche wordes must have a short and sharpe attent or pronunciacion at the ende,

¶ And here is to be notyd that all maner nownes of the masculyne gender endynge in the synguler nomber in .c. g. or .f. as blanc. whyt. vyf. quicke. long. longe, shall be wryten in the plurell nombre with .s. hauynge .c. g. or .f. put awaye from them. as

blans. vis. lons.

Of. G. ¶ Whan this letter .g. is wryten in frenche in myddes of

¹ Though expressed generally, this remark evidently refers exclusively to the syllable en where it is now pronounced (as), which we have seen

Hart also pronounced (an), supra p. 802. See also infra in this § for all the French nasals during the xvi th century.

a worde bytwene a vowell and a consonant, than shal it be soundyd lyke .n. and .g. As compaigon, compaige. How be it some wryte suche wordes as they muste be soundyd with .g. and .n. as com-

pagnon. a felawe. compaigne. a company.

Of. H. ¶ H. is no letter but a tokyn of asperacion or sharpynge of a worde, as in these wordes, hors. out, dehors. without, honte. shame, haut. hye, and in other lyke in whiche wordes and lyke .h. is sounded. other wordes be in whiche. h. is wryten and not soundyd as heure. an houre, helas. alas, homme. a man, with other lyke.

Of. I & E. ¶ I. and. E. or ony other two vowels in togyder in myddes or in the ende of a worde, whan they are put bytwene two consonants, or bytwene a vowell and a consonant. than eyther of them shall have his founde as in these wordes biens, goodes, riens, no thynge, Ioie. Ioy, voic, a way, And suche lyke wordes, yet some holde oppynyon that in these wordes, and in suche other .I. or E shall not be soundyd.

¶ Also in true frenche these wordes. Ie. ce, are. wryten without o. in theyr ende but in pycard, or gascoygne, they are wryten with

o. at the ende, as thus ieo ceo

- Of. K. ¶ This letter .K. in dyuerses speches is put for. ch. As kinal. kien. vak. but in true frenche it is not, but these wordes and suche lyke be wryten with ch. as cheual. a hors, chien. a dogge, vache. a cowe, Also in certaynes countres of Fraunce for c. is wryten ch. as piecha. for a pieca, a whyle ago, tresdoulche for tresdoulce. ryght swete. And so of other lyke.²
- [13] ¶ In lykewyse in some countrees of Fraunce names of dygnyte and offyce whiche are the synguler nombre are wryten plurell with, s, at the ende, as luy papes de Rome, luy roys de france, luy sains esperis: but in true frenche these names be wryten without, s. as le pape de rome, the pope of rome. le roy de france, the kynge of fraunce. le saint esperit, the holy goost. and so of lyke.
- Of. L. ¶ This lettre .L. set in myddes of a worde immedyatly before a vowell shall kepe his full sounde, as nouellement, newly. snnuelement, yerely. continuclement contynually parlant, spekynge. egallement, egally. But yf a consonant folowe. I immedyatly than ,I, shall be sounded as ,u, as loyalment, principalment, whiche are sounded thus. loyaument, faythfully. principalment, pryncipally. Except this worde ,ilz. in whiche worde ,l, and ,z, hath no sounde somtyme. as ilz vont ensemble, they go togyder. and somtyme ,l, hath his sounde and ,z, leseth the sounde whan ,ilz, cometh before a worde begynnynge with a vowell, as ilz ont fait: they have done.
- ¹ The reversal of the order in the description of the pronunciation may be accidental. This loose writing, however, gives no reason to suppose that the sound of this gn was either (ng) or (gn).

 ² These remarks must refer to pro-

These remarks must refer to provincial pronunciations, and indicate an interchange of (k, sh) in French answering to that of (k, tsh) in English.

³ The general observation evidently refers to the particular case, al pronounced as au, but whether as (au) or (co) cannot be deduced from such loose writing.

Whan ,l, is wryten in the ende of a worde, and that the worde folowyng begyn with a consonant than shall .l. in suche wordes lese his owne sounde and be sounded lyke an .u. as ladmiral dengleterre, the admyrall of englande, but yf the worde folowynge ,l, begyn with a vowell than ,l, shall kepe his owne sounde: as nul home, no man. nul aultre, none other, nul vsage, no vsage. Also ,l, put in the ende of a worde of one syllable shal haue no sounde at all as il sen est ale, he is gone. ie le veul bien, I wyll it well. In suche wordes il and veul, and other lyke ,l, leseth his sounde .ll. double in myddes of a worde must be sounded with hole and full voyce.¹ as fille, a doughter. fillette, a lytell mayde. oraille, an eere and so other lyke.

Of. N. ¶ This lettre. N. put betwene a vowell and a consonant in ende of ony worde whiche is a verbe of the thyrde persone plurell, and the indycatyf, or optatyf mode what tens so euer it be, it shall not be sounded in true pronouncynge of frenche, as ilz ayment, they loue. ilz lisent, they rede. whiche wordes and all other lyke must be sounded thus without ,n. ilz aymet. ilz liset. ¶ Out of this rule be excepte verbes of one syllable in whiche ,n, must haue the sounde. as ilz vont, they go: ilz ont, they haue: ilz sont, they are: ilz font, they make, with all theyr modes: tens: and compoundes. in whiche, n shall kepe his ryght sounde.

Of. P. ¶ Whan .P. is wryten in the ende of a worde in frenche, and the next worde immedyatly followynge begynnynge with a consonant than shall it less the sounde, as thus il a trop grant auoir, he hath to grete goodes. il vient trop tard, he cometh to late trop hault, to hye trop bas, to lowe in whiche worde trop ,p, hath not

his sounde, but it must be sounded thus, tro hault, tro bas, tro tard.

¶ Of this rule be except propre names endynge in ,p. in whiche ,p, must have his full sounde, as, philip. But yf a worde ende in ,p, and the worde nexte folowynge begyn with a vowell than ,p, shall have his full sounde. as miculx vault assez que trop auoir, better is ynough than to have to moche. Also these wordes sepmaine, a weke. temps. tyme. corps, a body. and this verbe escripre, to wryte, with [14] all nownes and participles commynge therof, indifferently may be wryten with p. or without p. but though p. be wryten in them it shall nat be soundyd: as semaine, tems. corp escripe.

tems, cors escrire.

Of. Q. ¶ Q. in pronounsynge muste have a softe and lyght sounde,² And it shall nat be wryten in any frenche worde, without two vowels, immedyatly followynge: of whiche two vowels the fyrste shalbe u. as qui que, the whiche, quar, for querir, to seke, quant, whan, and suche other, but some be whiche wryte q. in suche wordes without this vowell .u. followynge as qi. qe. &c. whiche maner of wrytynge is vnsemely: And also it is contrary to all rules of ortography or true wrytyng aswell in frenche, as in

¹ The mouillé sound of l in French (lj) is certainly very badly expressed that it is to be (k) and not (kw), by these meaningless words.

sther langages and no reason haue they whiche wryte suche wordes without u. to assyst them saue theyr vnresonable vse agaynst all rules, and good custome. More ouer these wordes quar, querir, quast. &c. maye be wryten indifferently: with, q. k. or c, as quar, or car, or els kar. &c.

Of. R. ¶ This letter. R. put in the ende of a worde shall kepe his owne full sounde, as cueur, as thus Iay grant mal au cueur, I have graet dysease at my herte: Ie vous prie pour me consailler, I pray you counsell me: but in some countres .r. is soundyd, as this letter, z. as compere, a gossyp, is somtyme soundyd thus

sompez, and so of other wordes endynge in this letter. R.

Of. s. syngle. ¶ A syngle .s. in myddes of a worde ought nat to be soundyd if a consonant folowe immedyatly: as tresdoulce, ryght swete: tresnoble, ryght noble: tresgracious, ryght gracyous: but .s. in myddes of these wordes folowyng hath his full sounde: as thus: prosperite, chestien, substance, esperance, meschant, Instituer, escharuir, transglouter, Augustynes, Inspirer, descharger, estaincher, estandre, peschies, constrayndre, despenser, escuser, with al nownes, and aduerbes commynge of them. In which .s. must be soundyd, if a consonant immedyatly folowe .s. But if a vowel folowe this letter. s. in the myddes of a worde and no letter betwene .s. and the vowell, than shall .s. haue his full sounde, as it is wryten, tresexcellent, ryght excellent: treshault, ryght hye: treshonore, ryght honoured: treshumble, ryght humble.

Of double .ss. \(\) Whan this letter .ss. double is wryten in myddes of a worde it must alway be soundyd: as puissant, myghty with such lyke. More ouer if this letter .s. syngle, be wryten in the ende of a worde, whiche is a pronowne conjunction verbe or preposicion, if the worde followynge .s. begyn with a consonant, than s. shal nat be soundyd: as dieu vous sauue, god saue you. dieu vous gard, god kepe you. voules vous boire, Wyl ye drynke. nous sommes beaucoup des gens, we be moche folke, in which wordes .s. shal nat be soundyd. But whan this letter .s. is wryten in the ende of a worde in frenche and that the next worde followynge begyn with a vowel than must .s. haue his full sounde. as Ie vous syme, I loue you. Ic vous emprie, I pray you. estes vous icy, be ye here, and in suche other wordes. But in these wordes followynge. a shall have no sounde, all if the wor 15 de folowynge begyn with s vowell. vous ditez vray, ye say trouth. vous ditez vrayment. ye say truely. In whiche wordes .s. shall lese his sounde. Also in this worde dis, whan it is a nowne of nombre and taken for ten. if there followe a consonant .s. shall not be soundyd, as to say dis hures .x. fi. it muste be soundyd di. fi. But this nombre ten in frenche moost vaually is spelled with .x. as .dix. and not with .s. as But whan ditz is a participle, and betokeneth asmoche as mayd than in the same worde .s. or .z. shall kepe his sounde. as les heures sont ditez the houres be sayde

¹ See the extract from Palsgrave, exceptions to the rule. See "all if" = supra p. 198.

¹ Meaning although, as these are the

Of. T. This letter T. put in the ende of a worde beynge a verbe of the thirde persone syngular and present or preteryt tens of the indicatyf mode if the worde following begyn with a vowell, it shall be soundyd. as est il prest, is he redy. Il estoit alostel, he was at home. But if the worde followynge begyn with a consonant, than T. shal nat be soundyd. as quest ce quil dist, what is that he sayth II est prest, he is redy. il fust tout esbahy. he was al abasshed. Il ny a que vanite en cest monde There is nought but vanyte in this worlde. Also all nownes and participles, whiche ende in the synguler nombre in t, in the plurell nombre muste be wryten with. s. or with z. the samet. [=same t] put away from the ende of the word as thus worde, saynt, holy. is wryten in the synguler nombre with t. in the plurell nombre it is thus wryten, as sainz. or sains without. t. but in some places of fraunce they wryte suche wordes in the plurel nombre with t. e. and z. or s. at the ende after the moste vsed Ortography of frenche. For amonge frenche men this is a general rule. that as ofte as t. is put in myndes of a worde beynge a nowne of the femynyne gender it shall not be wryten without a vowell immedyatly followynge, as les saintez vierges du ciel ne cessent de louer dieu, the holy virgyns of heuen cesseth not to laude god. Il ya des femmes que sont bien riches marchandes, there be women whiche be well ryche marchandes. And so may other frenche wordes endynge in tes. be wryten with t. and es. or with z. or s. without t. but it accordeth not to reason to wryte these wordes thus saintz toutz marchantz in the plurell nombre, all if they be wryten with t. in the synguler nombre, for in the plurell nombre they ought nat to be writen with t. for ony of these two letters s. or z. in frenche stande for as moche as ts. or tz. But for a conclusion though suche wordes in in certayne countres of Fraunce be wryten with ts. or with tz. in the ende. as thus mon amy sont nous litz faitz, my frende are our beddes made. Beau sir sont mez pourpointz faitz, faire sir be my doublettes made. yet after true ortography of frenche these wordes and other suche muste be bothe wryten and soundyd without t. as lis fais pourpoins Also these wordes filz, a sone. mieulz better. fois one tyme. assez, ynoughe. vous poues, ye may. vous prenes, ye take, vous enseignes, ye teche, your lisez, And suche other ought to be wryten without t. but some be whiche wrongly wryte these wordes with t. As filtz, mieultz, foitz, assetz, pouetz, prenetz. &c. whiche wordes in ryght frenche haue no t. neyther in soundynge nor in wrytynge. Also this conjunction. betokeneth the same thynge in frenche that it doth in latyn. that is to say, and, in englysshe in whiche conjunction t. is never soundyd though it be wryten with et. as et Ie vous fais a scauoir, And I make you to wytte or knowe.

[16] Of. U. ¶ U. Wryten in myddes of a worde shall often hane no sounde, bothe in latyn frenche and other langages. And that whan it is wryten immedyatly after ony of these thre letters, that is to say. q. g. or, s. As qui que, language, langue, a tonge. querir, to seke: guerre, warre, and suche other. In whiche wordes u. is wryten but not soundyd. Neuertherles in dyuers Countres after

the foresayd letters they sounde w, doubled as quater, quare, quaysy. Englysshe men, and Scottes alway sounde u. after the letters both in Latyn and in theyr Uulgayre or common langage. In lyke wyse do dutche men, and almayns. As quare, quatuor

quart, quayre, qwade. and suche lyke.

Of. X. This letter X. put in thende of a worde may eyther kepe his owne sounde, or els it may be soundyd as. z. as cheualx, or cheualz. hors, doulx, or doulz. swete miculx, or miculz. better which wordes may indyfferently be wryten with. x. or with z. Also this worde diculz, ought not to be wryten with x. in the ende except it be in the nominatyf, or vocatyfe case. but by cause of ryme somtyme it hath x. in other cases. And whan x. is wryten in suche cases somtyme it is soundyd and somtyme not. As if dicux be wryten in the nominatyf case and a consonant folowe immediatly than x. shal not be soundyd. as dicux vous sauue, god saue you. dicux vous garde, god kepe you. but if this worde dicux be set in the vocatyfe case: than shall x. kepe his sounde. As benoit dicux ais pitie de moy, O blessyd god haue pyte on me.

Of. Y. ¶ This letter y. hath the sounde of this letter I and in many wordes of Frenche it ought to be wryten in stede of I by cause of comelynes of wrytynge. In latyn wordis y. ought not to be wryten, but whan ony greke worde is myngled with latyn wordes for curyosite of the wryter or diffyculte of interpretacion in suche greke wordes y. muste be wryten in stede of I. in Englysshe wordes y. is moste commonly wryten in stede of I, soo that the englysshe worde be not deducte of ony latyn worde: but specyally y: muste be wryten for I, in the ende of englysshe wrodes, and whan

n: m, or u, is wryten before, or behynde it.

Of. z. ¶ z. Put in the ende of a worde muste be soundyd lyke s. as querez, seke ye. anez haue ye. liscz, rede ye. And lyke wyse as s. in the ende of a frenche worde is somtyme pronounced, and somtyme not, ryght so, z. put in the ende of a worde foloweth the same rule: somtyme to be soundyd, and somtyme not as aperyth in the rule of .s.

¶ Here is also to be noted for a generall rule, that if a worde of one syllabe ende in a vowell, and the worde followinge beginne also with another vowell, than both these wordes shalbe ioyned to gyther, as one worde: both in wrytynge and soundynge. As dargent: for de argent. ladmiral, for le admiral, whiche rule also is obseruid in englysshe, as thexehetour, for the exchetour: thexperyence, the experyence.

Here ends p. 16.

¶ And also here is to be notyd that many wordes be which sounde nere vnto latyn and be vsed in bothe the langages of Frenche and Englysshe amonge eloquent men, as termes indifferently belongynge to both frenche and englysshe. So that the same sygnyfycacyon, whiche is gyuen to them, in frenche is also gyuen to

them in englysshe, 1 as thus.

A sught to be pronounced from the bottom of the stomak and Openly. E. a lytell hyer in the throte there proprely where the elysche man soundeth his a

i more hyer than the e within the mouthe

o in the roundenesse of the lyppes

v in puttynge a lytell of wynde out of the mouthe thus, ou. and Not you. And ye must also gyve hed fro pronouncynge e for i, or ay, for i, as do some that for miserere say maysiriri.1

A. also betokeneth, hawe or hat, wha it cometh of this verb in

Latin, habeo, as here after ye may se.

Of two consonantes at the ende of a word often the fyrst is left, and is not pronounced, as in this worde, perds, the d, is not pro-**Dounced.** Et ie faingz g is not pronouced. Je consentz, t is not prononced, but thus ben they wryte bycause if ye orthography, and to gyve knowledge, yt perds cometh of this uerbe in latin,

(tei bei) with the modern L sibi.

¹ This probably indicates an English ition (mai sitirs). Compare

perdo, and not of pers that is a coulour. And thus may ye ymagyn of the others How-be it, I am of opynyon yt better sholde be to pronouce every lettre and say. . . . [the examples are taken from the French side]. Ie perds vostre accointace en pronuceant le d) que Ie pers. Pronoce vng chacun come il luy plaira, car trop est difficille a corriger vielles erreurs.

S. in the myddle of a worde leseth a lytell his sowne, and is not so moche whysteled, as at ye ende of ye worde, as tousiours, desioyndre, despryuer, estre, despryser Deux, ss, togyder ben moche pronounced, as essayer, assembler, assurer, assieger.

S. betwene two vowelles, pronounceth by .z. as aize. aise, mizericorde misericorde, vsage. and I beleue that by suche pronuntiacyon, is the latyn tongue corrupte for presently yet some say mizerere for miserere.

Sp, st, ct, ought not to be deuyded asonder, but we ought to say, e sperance, not es perance, and e spaigne, not es paigne. And e sperit not es perit. e striuer, not es triuer, e stoint, not es toint. Satisfa ction, non satisfac tion. Corre ction. &c.

C. the moost often is pronounced by s, as. france pieca, ca. And yf a consonante, or other letters is ioyned with the vocale that is after the c, ye e shall be pronounced by q, as Cardynal, concordance, casser Combyen, couraige, cuider.

G. somtyme is pronounced by i, as, bourgois bourgoisse, gregois, what so euer it be, I conceille, yt they followe some good autour, wtout to gyue or to make so many rules, that ne do but trouble and marre the vnderstandynge of people

PALSGRAVE ON FRENCH PRONUNCIATION, 1530.

In addition to the many quotations from Palsgrave's First Book, scattered through the above pages, the following extracts from the "Brefe Introduction of the authour for the more parfyte understanding of his first and seconde bokes," ought to find a place here:

"The frenche men in theyr pronunciation do chefly regarde and couet thre thynges. To be armonious in theyr speking. To be brefe and sodayne in soundyng of theyr wordes, auoydyng all maner of harshenesse in theyr pronunciation, and thirdly to gyue euery worde that they abyde and reste vpon, theyr most audible sounde. To be armonyous in theyr spekyng, they vse one thyng which none other nation dothe, but onely they, that is to say, they make a maner of modulation inwardly, for they forme certayne of theyr vowelles in theyr brest, and suffre nat the sounde of them to passe out by the mouthe, but to assende from the brest straight up to the palate of the mouth, and so by reflection yssueth the sounde of them by the nose. To be brefe and sodayne, and to auoyde all maner harshenesse, whiche myght happen whan many consonantes

¹ Did Palsgrave know anything of an argument for the recent introduction Portuguese? If he did, this might be of nasality into Portugal.

come betwene the vowelles, If they all shulde have theyr distyncte sounde. Most commenly they never vise to sounde past one onely consonant betwene two vowelles, though for kepyng of trewe orthographie, they vise to write as many consonantes, as the latine wordes have, whiche theyr frenche wordes come out of, and for the same cause, they give somtyme unto theyr consonantes but a aleight and remisshe sounde, and farre more dynersly pronounce them, than the latines do. To give every worde that they abyde vpon his most audible sound, the frenche men iudgyng a worde to be most parfaytly herde, whan his last end is sounded hyghest, vie generally to give theyr accent vpon the last syllable onely, except whan they make modulation inwardly, for than giveng theyr accent vpon the last syllable saue one, and at the last syllable of suche wordes, they sodaynly depresse theyr voyce

agayne, forming the vowell in the brest . . .

Where as I have sayd that to be the more armonius they make a maner of modulation inwardly, that thyng happeneth in the soundyng of thre of theyr vowelles onely A, E, and O, and that nat vniuersally, but onely so often as they come before M, or N, in one syllable, or whan E, is in the last syllable, the worde nat hauyng his accent vpon hym . . . so that these thre letters M. N, or E, fynall, nat hauyng the accent vpon hym, be the very and onely causes why these thre vowelles A, E, O, be formed in the brest and sounded by the nose. And for so moche as of necessyte, to forme the different sounde of those thre vowelles they must nedes at theyr first formyng open theyr mowth more or lesse, yet whan the vowell ones formed in the brest, ascendeth vpwardes and must haue M, or N, sounded with hym, they bryng theyr chawes to getherwardes agayne, and in so doyng they seme to sound an v, and make in maner of A, and O, diphthonges, which happeneth by rayson of closyng of theyr mowth agayne, to come to the places where M, and N, be formed, but chefely bycause no parte of the vowell at his expressyng shulde passe forth by the mowth, where as els the frenchemen sounde the same thre vowelles, in all thynges lyke as the Italiens do, or we of our nation, whiche sounde our vowelles aryght, and, as for in theyr vowell I, is no diffyculty nor difference from the Italien sounde, sauyng that so often as these thre letters

1 This passage, which had not been noted when the observations supra p. 110 were written, seems to confirm the conclusions there drawn respecting Palsgrave's pronunciation of English long i, which he here identifies, when sounded "aryght" with the French and Italian i. Concerning the Italian sound there was never any doubt. Concerning the French there is also perfect unanimity, except in the one passage from Palsgrave himself, cited supra p. 109. The limitation "aryght," applied to English sounds, implies that the general pronunciation was different

from Palsgrave's, but that he disapproved of that general usage, which we know must have been (ei), and practically identified the "right" sound, that is, his own sound of long i, with (ii). Yet that it was not quite the same is shewn by the passage on p. 109. Hence the conclusion that it was (ii) appears inevitable. And as this conclusion is drawn from premises altogether different from those which led to the same result for Chaucer's pronunciation (p. 282), it is a singular corroboration of the hypothesis there started for the first time.

I, L, L, or I, G, N, come before any of the fyrst thre vowels A, E, or O, they sound an I, brefely and confusely betwene the last consonant and the vowell following, where as in dede none is written whiche soundynge of I, where he is nat written, they recompence in theyr v, for thoughe they wryte hym after these three consonantes F, G and Q, yet do they onely sounde the vowell next folowing v. . . . So that, for the most generalte, the frenche men sounde all theyr fyue vowelles lyke as the Italiens do, except onely theyr v, whiche euer so often as they vse for a vowel alone, hath with them suche a sounde as we gyue this diphthong ew, in our tong in these wordes, rewe an herbe, a mewe for a hawke, a clewe

"And as touchynge theyr diphthonges, besydes the sixe, whiche be formed by addyng of the two last vowelles vnto the thre fyrst, as ai, ei, oi, au, ev, ov, they make also a seuynth by addyng of the two last vowelles together vi, vnto whiche they gyue suche a sounde as we do vnto wy in these wordes, a swyne, I twyne, I dwyne, soundyng v, and y, together, and nat distynctly, and as for the other sixe haue suche sounde with them as they haue in latin, except thre, for in stede of ai, they sounde most commenly ei, and fo oi, they sounde oe, and for av, they sounde most commenly ow, as

we do in these wordes, a bowe, a crowe, a snowe,1

"What consonantes so euer they write in any worde for kepyng of trewe orthographie, yet so moche couyt they in redyng or spekyng to haue all theyr vowelles and diphthonges clerly herde, that betwene two vowelles, whether they chaunce in one worde alone, or as one worde fortuneth to followe after an other, they neuer sounde but one consonant atones, in so moche that if two different consonantes, that is to say, nat beyng both of one sorte come together betwene two vowelles, they leue the fyrst of them vnsounded, and if thre consonantes come together, they euer leue two of the fyrst vnsounded, puttyng here in as I haue sayd, no difference whether the consonantes thus come together in one worde alone, or as the wordes do folowe one another, for many tymes theyr wordes ende in two consonantes, bycause they take awaye the last vowell of the latin worde, as Corps commeth of Corpus, Temps, of Tempus, and suche lyke, whiche two consonantes shalbe lefte vnsounded, if the next worde following begyn with a consonant, as well as if thre consonantes shuld fortune to come together in a worde by hym selfe. But yet in this thyng to shewe also that they forget nat theyr ternarius numerus of all theyr consonantes, they have from this rule privyleged onely thre, M, N, and R, whiche neuer lese theyr sounde where so euer they be founde written, except onely N, whan he commeth in the thyrde parson plurell of verbes after E. . . .

"The hole reason of theyr accent is grounded chefely vpon thre poyntes, fyrst there is no worde of one syllable whiche with them

¹ This gives the following usual, as correct pronunciations : ai = (Ei), oi = distinct from Palsgrave's theoretically (OE), au = (OOU), meaning, perhaps, (OO).

hath any accent, or that they vie to pause voon, and that is one great cause why theyr tong semeth to vs so brefe and sodayn and so harde to be vnderstanded whan it is spoken, especially of theyr paysantes or commen people, for thoughe there come neuer so many wordes of one syllable together, they pronounce them nat distinctly a sonder as the latines do, but sounde them all vnder one voyce and tenour, and neuer rest nor pause upon any of them, except the commyng next vnto a poynt be the cause thereof. Seconde, every worde of many syllables hath his accent vpon the last syllable, but yet that nat withstandynge they vse vpon no suche worde to pause, except the commyng next vnto a poynt be the causer therof, and this is one great thyng whiche inclineth the frenchemen so moche to pronounce the latin tong amysse, whiche contrary neuer gyue theyr accent on the last syllable. The thyrde poynte is but an exception from the seconde, for, whan the last syllable of a frenche worde endeth in E, the syllable next afore him must have the accent, and yet is nat this rule ever generall, for if a frenche worde ende in Te, or have z, after E, or be a preterit partyciple of the fyrst conjugation, he shall have his accent **ypon** the last syllable, according to the seconde rule. . . .

"Whan they leue any consonant or consonantes vnsounded, whiche folowe a vowell that shulde haue the accent, if they pause vpon hym by reason of commyng next vnto a poynt, he shalbe long in pronunciation, So that there is no vowell with them, whiche of hymselfe is long in theyr tong As for Encletica I note no mo but onely the primative pronownes of the fyrst and seconde parsones syngular, whan they followe the verbe that they do gouerne."

FRENCH PRONUNCIATION ACCORDING TO THE ORTHOPPISTS OF THE SIXTEENTH CENTURY.

The following are the principal authorities, many of which have already been quoted, so that it will only be necessary to refer to them, and to complete this sketch by a few additional citations. They will be referred to by the following abbreviations.

Bar. Barcley, 1521, suprà pp. 803-814. L. Lambeth fragment, 1528, suprà pp. 815-6. P.

Palsgrave, 1530, suprà p. 31. Jacobi Sylvii Isagege, 1531, suprà p. 33. 8.

du Guez, 1532, suprà p. 31. G.

Meigret, 1545 and 1550, supra pp. 31 and 33. M.

Pell. Pelletier, 1555, suprà p. 33. R. Ramus, 1562, suprà p. 33.

B. Beza, 1584, supra p. 33.

E. Erondelle, 1605, suprà p. 226, note, col. 1.

Holyband, 1609, suprà p. 227, note, col. 1.

See especially Livet (suprà p. 33), and Didot (suprà 589, note 1), for accounts of all these writers except Bar. L. E. H. Didot's Historique des réformes orthographiques proposées ou accomplies, forming appendix D to his work, pp. 175-394, carries the list of authors down to the present day, and is very valuable.

In the following tabular view, simple numbers following any

author's name refer to the page of this work in which the required quotation will be found; if p. is prefixed, the reference is to the page of the author's own work, of which the title is given in the passages just referred to. No pretension is made to completeness.

In order not to use new types, the three varieties of e are represented by E, e, e, in all the authorities (except Sylvius, where they could not be clearly distinguished, and where his own signs are e, e, e, therefore employed), and N, L, are used for Meigret's forms for n, l, mouillés. In Ramus certain combinations of letters, as au, eu, ou, ch, are formed into new letters, and are here printed in small capitals thus au, eu, ou, ch. Sylvius employs at, ot, &c., as diphthongs, where the circumflex properly extends over both letters, but the modern form has been used for convenience.

The Vowels and Diphthongs.

A=(a) L. 815, A=(a) P. 59, A=(a)

"ore largiter diducto profertur" S. 2,
A=(a) G. 61, uncertain (a, a) M.,
Pel., R. A=(a) B. A=(a), E. 226, n.
Afterwards English writers identify
it with (AA). In this uncertainty it
is best taken to be a full (a), but not
(ah), as B. warns, saying "Hiec vocalis, sono in radice linguæ solis

quodam ad quartam vocalem o accedente pronuntient." B. p. 12. In
the termination -age = (ai) P. 120.

"You must note that a is not pronounced in these words, Aoust, saoul,
aorner, aoriste, which wordes must
bee pronounced as if they were
written thus, oot, soo, orner, oreeste."
F.

AI=(ai) Bar. 806, doubtful, L. 815,
AI=(ai ei) P. 118. "Diphthongos à Græcis potissimum mutuati videmur, scilicet, aî, eî, oî, oŷ, aû, eû, oû. Eas tamen quâm cæteri Europæ populi plenius et purius pronuntiatione, si quid judico, exprimimus. Si ipsæ simul concretæ, debent in eadem syllaba vim suam, hoc est, potestatem et pronuntiationem retinere, ut certe ex sua definitione debent. Frustra enim distinctæ sunt tam literæ quâm diphthongi, si sono et potestate nihil differunt. Namque aî Græcis propriam, Latinis quibusdam poetis usurpatam, non æ seu ç cum Græcis: non ai divisas vocales cum poetis Latinis, sed aî una syllaba utriusque vocalis sonum leniter exprimente, pronuntiamus: qualis vox ægrotis et derepeute læsis est plurima." S. p. 8. This should

mean, "not (B), nor (a,i), but (ai)," especially as (ai) is a common foreign groan answering to the English (oou!). But the following passages render this conclusion doubtful: "aî diphthongum Græcam ut sæpe dividunt Latini, dicentes pro h paia Mai-a, & čias Ai-ax, & Aulai, aquai. pictài, terrai pro aulæ, aquæ, terræ. Sic nos eandem modo conjunctam servamus, modo dividimus ad significandum diversa, ut G-è traî [g- is the consonant (zh), è is the muto-guttu-ral] id est traho et sagittam emitto, quam ob id traîet à tractus vocamus. G-è trài, id est prodo et in fraudem traho, licet hoc à trado videri queat. G'-haî, id est habes et teneo: infinitivo hauoîr. G-è hai et g-è hé, id est, habeo odio et odi. infinitivo hair, uti à traî traitrè : à trai trair infinitivos habemus" S. p. 14. "Diæresis, id est divisio unius syllabæ in duns, ut Albai, longai, syluie trissyllaba; pro Albæ, longæ, sylûæ dis-syllabus. Eadem modo et Galli βόσκον boîs, id est lignum et sylva. bois, id est buxus. Habeo g'-haî, id est teneo, et g-è hai, id est odi" Id est teneo, et g-e hal, id est odi 'S. p. 56. Hence perhaps Sylvius's diphthong was really (a) although he disclaims it. A = (ai, ei, e) the last two more frequently, M. 118, Pell., R. 119, B. A = (e) in t'ay, ie feray, = (a,i) in Esa-y-e, abba-y-e, = (i) in ains, ainçois, ainsi, E. nearly the same H. 227 note. The usage of M., Pell, R., B. seems to be as follows. be as follows.

"Literæ omnes vt apud Græcos & Latinos, ita quoque apud Gallos sonum in pronuntiando triplicem exprimunt, plenum, exilem, medium. Plenum quidem, exempli gratia, vocales, quando aut pure sunt, aut syllabas finiunt, vt ago, egi, ibo, oua, vnus. E Gallis tam frequens quam a Italis et Narbonensibus, sonum plenum obtinens, (id est quoties aut purum est, aut syllabam finit) à Gallis trifariam pronuntiatur, plene scilicet, qualiter Latini pronuntiant in verbo legere; tuncque ipsum velut acuti accentus virgula signamus, ob id quòd voce magis exerta profertur. vt amatus amé, bonitas bonté; et ita in cœteris fermè nominibus in as, et in participiis præteriti temporis primæ. Sed excommuniem, sacrificiem et similia, quando scilicet i præcedit, ferè Galli pronuntiant. Deinde exiliter, et voce propemodum muta; quod tum, grauis accentus virgula notamus, quoniam vox in eo languescens velut intermoritur, vt ama aîmès, Petrus Pierrè. Medio denique modo, quod lincola à sinistra in dextram partem æqualiter & recte ducta ostendimus vt amate aîmēs. Adde quod syllabam el, nonnunquam voce Latinorum proferimus, vt crudelis cruel, quo modo Gabriel, aliquando autem ore magis hianti: vt illa ellè. E etiam ante r, s, t, x, & quasdam alias consonantes, in omnibus apud Latinos vocem non habet eandem. Natiuum enim sonum in pater, es à sum, et textus pronuntiatione quorundam retinet. In erro autem, gentes, docet, ex, nimis exertum, et vt sie dicam, dilutum. Sie apud Gallos sono genuino profertur in pér, à par paris ; és à sum ; ét, confunctione: in qua t omnino supprimunt Galli contra rationem. The passage is very difficult to understand. His \dot{e} seems to be (ee), his \dot{e} (v), his \bar{e} (e), and his exceptional e to be (e). $\dot{E} = (e, e?)$ M. 119, note, = (e, e, e?) Pell. "Tertius huius vocalis sonus Græcis et Latinis ignotus, is ipse est qui ab Hebræis puncto quod Seva raptum vocant, Galli vero e foemineum propter imbecillam et vix sonoram vocem, appellant." B. p. 13.—"e Feminine hath no accent, and is sometimes in the beginning or midst of a word, as mesurer, mener, tacitement, but moste commonly at the ende of wordes, as belle fille, bonne Dame, hauing but halfe the sound of the e masculine, and is pronounced as the second syllable of these latine wordes facere, legere, or as the second sillable of namely, in English, and like these english wordes Madame, table, sauing that in the first, the english maketh but too sillables, and we make three, as if it were written Ma-da-me and in table the english pronounceth it

as if the e were betweene the b and the I thus, tabel, and the French doe sound it thus, ta-ble; you must take heede not to lift vp your voice at the last e but rather depresse it. e Feminine in these wordes, Ie lisoye, I'escripuoye, and such like, is not sounded, and serveth there for no other vse then to make the word long: doe not sound e in this word dea, us, ouy dea Monsieur, say ouy da: sound this word Iehan as if it were written Ian," E. And, similarly: "We do not call, é, masculine for the respect of any gender, but be-cause that it is sounded linely: as dote, lapide, me, te in Latine: and by adding another, e, it shall be called e, feminine, because that it hath but halfe the sound of the other, é: as tansée, fouëttée, &c. where the first is sharpe, but the other goeth slowly, and as it were deadly VVheresoeuer you find this, e, at the words end, it is an, e, feminine pronounce it as the second syllable of bodely in English, or the second of facere in Latin," H. p. 156. The transition in case of the present e muet seems to have been (e, e, s) in French, and in German to have stopped generally at (v), though (e) is still occasionally heard, 195, n. 2. The difficulty of distinguishing "round" vowels, that is those for which the hips are rounded, from diphthongs, especially in the case of (y, s),—see Hart, suprà p. 167, p. 796, n. col. 1, and B.'s remark below, makes all such descriptions extremely doubtful. 8. may have meant (y, 2) or (y, ce) by these descriptions, and these are the modern sounds. $EU=(\epsilon y)$ M. 137, see note on that page for G. des autels, Pel. B.-"La sixicsme voyelle cest vng son que nous escripuons par deux voyelles e et u, comme en ces mots, Peur, Meur, Seur, qui semble aussi auoir este quelque diphthongue, que nos ancestres ayent prononcee et escripte, et puis apres,

E. As eu is frequently interchangeable with or derived from o, ou, the probability is that the transition was (u, eu, ce, e) both the sounds (œ e) being now prevalent, but not well distinguished, see 162, note 3, and 173, note 1. It will be seen by referring to this last place that I had great difficulty in determining what sounds M. Féline intended by "l's sourd" and eu in modern French. I there decided that the former was (*) and the latter (œ). M. Féline has been dead several years, but Prince Louis Lucien Bonaparte, who conversed with him on the subject, says that I have just reversed the values of Féline's letters, and that Féline's e are my (œ, o) respectively. Hence wherever I have hitherto cited Féline's pronunciations this correction must be made, and especially on 327, the signs (2, cc) must be interchanged throughout, as (kcc losel kelke zhur) for (kc losel kelke zhur). It will be seen in the same place, suprà 173, note 1, that M. Tarver made no distinction between the two sounds. M. 'Edouard Paris, in the introduction to his translation of St. Matthew into the Picard dialect of Amiens, brought out by the Prince, makes e "sourd" in le, peu, de, jeu, meaning, as the Prince informed me (le, pe, de, zhe), and eu "ouvert" in veuf peuple, meaning, on the same authority, (vot, peeplh). On turning to M. Féline's

Dictionary I find, as interpreted by the Prince, (læ, pø, dæ, zhø; væf, peepl), so that in the two words le, de, Féline differs from 'E. Paris, and the latter agrees with me in the sound I have assigned to these words. According to the Prince, half France says (10, d0), and the other half (10c, d0c). In Germany also the sounds (0, 0c) are confused, and have no difference of meaning. In Icelandic they are kept distinct by the different orthographies $u=(\vartheta)$, $\ddot{o}=(\varpi)$, 546, 548. Compare also the mutation or umlaut, (o . . i=9h, 0, 1), 557.

The Nasal Consonants and their effect on the Vowels.

M, "in the frenche tong hath thre dyners soundes, the soundyng of m, that is most generall, is suche as he hath in the latyn tong or in our tong. If m followe any of these thre vowelles a, e, or o, all in one syllable, he shalbe sounded somthyng in the nose, as I have before declared, where I have shewed the soundyng of the sayd thre vowels [143, 150. and also: "if m or n folowe nexte after e, all in one syllable, than e shall be sounded lyke an Italian a, and some thynge in the noose."] If m, folowyng a vowell, come before b, p, or sp, he shalbe sounded in the nose and almost lyke an n, as in these wordes plomb, colomb, champ, dompter, circumspection, and suchlike." P. folio 3, see also suprà 817. " M, est ferme au commencement de la syllabe: en fin elle est liquide, comme Marie, Martyr, Nom, Bam, Arrierebam : qui a este cause a nos Grammairiens denseigner que m dewant p, estait presques supprimee, comme en Camp, Champ. N est volontiers ferme au commencement du mot, et en la fin : comme Nanin, non, mais au milieu elle est quelquefois liquide, comme en Compaignon,

Espaignol," R. p. 24. Here the "liquid" n appears to be (nj), and n final is "firm" as well as n initial, but a difference between m final and m initial is found, the latter only being "firm" and the former "liquid," and this liquidity, which is otherwise incomprehensible, would seem to imply the modern nasality of the previous vowel, were not final n, the modern pronunciation of which is identical, reckoned "firm." The two passages are therefore mutually destructive of each other's meaning. In his phonetic writing R. makes no distinction between firm and liquid m, but writes liquid n (nj) by an n with a tail below like that of c.

with a tail below like that of c. N = (n) only, Bar. 810. N "in the frenche tong, hath two dyners soundes. The soundyng of n, thau is moost generall, is suche as is in latyne or in our tonge. If n folowe any of these thre vawelles a, e, or o, all in one syllable, he shalbe sounded somthyng in the nose, as I have before declared, where I have spoken of the sayd thre vowelles. That n lesoth never his sounde, nother in the first nor meane syllables, nor in the last syllables, I have afore declared in the generall

rules. But it is nat to be forgoten, that n, in the last syllable of the thirde parsons plurelles of verbes endyng in ent, is ever lefte vnsounded." P. fol. 13 .- In the phrase en allant, M. heard En nallant, with the same n at the end of the first word as at the beginning of the second, 189 .-"Francice sie rectè scripseris Pierre s'en est alle, quod tamen sic efferendum est, Pierre s'en nest alle. Græcos autem haud aliter hanc literam ante κ, γ, χ, pronuntiare consucuisse annotat ex Nigidio Figulo Agellius."
B. p. 32. This description seems to indicate the modern pronunciation nearly. E. and H. have no remarks on M, N.

AM, AN=(au,m, au,n) P. 143, 190, but this nasalisation is rendered doubtful by his treatment of final e as (o.) 181, note 5, and 817.—For S. see under E, suprà p. 822, col. 1. "Vrei et qu'an Normandie, e ancores an Bretagne an Anjou e an. "We sound, ain, as, in: so in steed of main, maintenant, demain, saint . . say, min, mintenant, demin, sint: but when ,e, followeth ,n, the vowel ,i, goeth more toward ,a; as balaine a whale, sep maine a weeke, and to make it more plaine, romain, certain, vilain, souverain, are pronounced as romin, certin, vilin: but adde ,e, to it, and the pronunciation is clean altered, so that, romaine, is as you sound, vaine, in English and such like, but more shorter." H. p.

EM, EN=(em, en?) except in -ent of the 3rd person plural = (-ct) ? Bar. 810; EM, EN = (a, m, a, n) when not before a vowel, P. 189, "Quid quod Parrhisienses e pro a, et contrà, præsertim m vel n sequente, etiam in Latinis dictionibus, Censorini exemplo, et scribunt et pronuetiant, magna sæpe infamia, dum amentes pro amantes, et contrà amantes pro amentes, aliaque id genus ratione con-fundunt." S. p. 11. It is not quite certain whether S. is referring to the Parisian pronunciation of Latin or French, as the example is only Latin, but probably, both are meant. Observe his remarks under E, suprà p. 821, col. 2. EM, EN=(Em, En). M. 189. Also, all the verbes of the third person plural that doe end in ent, as Ilz disent, Ilz rient, Ilz faisoient, Ilz chantoyent, there e is sounded as hauing no n at all, but rather as if it were written thus: ee dizet, ee riet, ee faizoyet, ee shantoyet." E.

EIN=(ein, ain), see under AI for numerous examples, and the quotation from B. under EI. It seems impossible to suppose that in the xvi th century it had already reached its modern form (eA), into which

its modern form (eA), into which modern in has also fallen.

IN=(in). No authority notices any difference in the vowel, as M., Pell, R. all write in in their phonetic spelling, and it is not one of the three vowels, a, e, o, stated by P., under M, N, to be affected by the following m or n. See the quotations from E. and H. under AIN. E. gives the pronunciation of honorez les princes as onoré lé preences, which seems decisive.

ON=(on?) Bar. 810, (u,n) P. 149.—M. Pel. R. write simply on=(on). E. gives the pronunciation of nous en parlerons après elles que dira on, as noou-zan-parleroon-zapré-zelles, ke deera toon.

Atqui o diductiore rictu pronuntiandum est quam u." S. p. 3. This seems to refer to the French pronunciation of Latin, rather than of French, and it agrees with the modern practice. S. pro-

ceeds thus: "Ita Galli vnus vn communis commun, defunctus defunct, et alia quædam, sono vocalis seruato pronuntiant, [that is, as (yn)]. Contra vndecim u°ne³e, uncia u°ne², truncus tru°nc, et pleraque alia, non aliter pronuntiant quam si per o scriberenter." S. p. 4. No other authority mentions or gives the slightest reason for supposing that either u or n differ in this combination from the usual value. P. writes vn for his ung, and M. has un, vne, Pell. has un, E. pronounces il est vn honnorable personnage as ee-le-tunnonable personnage.

The conclusion throm these rather conflicting statements seems to be, that sometime before the xvith century ain, en, ein, ien, in, un were pronounced (ain een, en, ein, ien, ien, in, yn) without a trace of nasality; that during the xvith century a certain nasality, not the same as at present, pervaded an, on, changing them to (a,n, o,n), and perhaps (a,n, o,n), so that, as explained by P. 817, foreigners heard a kind of (u) sound developed, and English people confused the sounds with (au,n, u,n). In the beginning of the xviith

¹ This conclusion was the best I could draw from the authorities cited, but since the passage was written I have seen M. Paul Meyer's elaborate inquiry into the ancient sounds of an and en. (Phonétique Française: An et En toniques. Mém. de la Société de Linguistique de Paris, vol. 1, pp. 244-276). Having first drawn attention to the occasional derivation of Fr. an, en from Latin in, he says: "Notons ici que le passage d'in à en et celui d'en à an sont deux phénomènes phonétiques d'ordre fort différents. Dans le premier cas l' n est encore assez détachée de la voyelle et l' i s'éteint en e, ce dont on a de nombreux exemples dès le temps des Romains. Le passage de l'e à l'a ne pourrait se justi-fier de même. Aussi est-il nécessaire de supposer qu'au temps où le son en s'est confondu avec le son an, l'n faisait déjà corps avec la voyelle. Ce n'est pas e pur qui est devenu a pur, mais e nasalisé qui est devena a nasalisé." p. 246. But this is theoretical. We have the fact that femme has become (fam) in speech, constantly so rhyming in French classics, and that solennel is (solanel) and a large class of words like évidemment (evidamas) change em into am without the least trace of a nasal vowel having interposed. Hence the proof that M. Meyer gives of the

early date at which en an were confounded in French, which is most complete, exhaustive and interesting, does not establish their pronunciation as the modern nasal vowels. M. Meyer gives as the result of his investi-gation: "En Normandie, et, selon toute probabilité, dans les pays romans situés sous la même latitude, en était encore distinct de an au moment de la conquête de l'Angleterre (1066), mais l'assimilation était complète environ un siècle plus tard. p. 252. He adds: "en anglo-normand en et an sont toujours restés distincts, et ils le sont encore aujourd'hui dans les mots romans, qui ont passés dans l'anglais," and says we must acknowledge "qu'en ce point comme en plusieurs autres, le normand transporté en Angleterre a suivi une direction à lui, une voie indépendante de celle où s'engageait le normand indigène." After M. Meyer's acute and laborious proof of the confusion of en, an in France, and their distinction in England, we need not be astonished if ai, ei in England also retained the sound (ai) long after it had generally sunk to (EE) in France. These are only additional instances of the persistence of old pronunciations among an emigrating or expatriated people.

century these sounds, or else (A,n, u,n) were adopted by the Frenchman E., in explaining sounds to Englishmen. As to en, it became (an) or perhaps (a,n), even in xvi th century probably not before, but it must have differed from an, because Englishmen did not confuse it with (aun), many Frenchmen wrote (En), and P. 817, does not allow it to be nasal. The complete fusion of an, en, into one nasal probably took place in xvII th century, except in the connection ien, where m either remained (m) or was confused with in. The combinations ain, in, seem to have been quite confused, and we have no reason to suppose that they were pronounced differently from (in). Whether sin followed their example it is difficult to say. Probably it did, as it is now identical in sound. But un remained purely (yn). We had then at the close of the xvi th century an, on, in, un=(a,n,on, in, yn). Now in the xvII th or xvIII th century a great change took place in French; the final e became absolutely mute. Simultaneously with this change must have occurred the disuse of the final consonants, so that words like regard regards, which had been distinguished as (regard regards), were still distinguished as (regar regard), now (regar, regard). It then became necessary to distinguish un, une, which would have become confused. About this time, therefore, I am inclined to place the degradation of (in, yn) into $(e_i n, e_i n)$. We should then have the four forms $(a_i n, o_i n, e_i n,$ on), which by the rejection of n after a nasalized vowel, a phenomenon with which we are familiar in Bavarian German, would become (a, o, e, e_{\star}) . The change thence to $(a \land o, o \land e \land o \land)$ or $(a \land o, o \land e \land o \land)$ the modern forms is very slight. The subject is a very difficult one, but there seems to be every reason to suppose that there was scarcely a shade of nasality in Chaucer's time, except perhaps in an, on, which generated his (aun, uun), and that the complete change had not taken place till the end of the xviith or beginning of the xviii th century. One important philological conclusion would result from this, namely that the modern French nasalisation offers no ground for the hypothesis of a Latin nasalisation. If this last existed, it must be otherwise traced. The history of Portuguese nasalisation now becomes interesting, but I am as yet unable to contribute anything towards it. The fact however that only two romance languages nasalise, while the Indian languages have a distinct system of nasalisation, and nasality is accomplished in Southern Germany, and is incipient, without loss of the n, in parts of the United States, is against the inference for Latin nasalisation from the existent nasalisation of French and Portuguese.

Other Consonants.

 hauyng an o, commynge next before hym, they vee to sounde an i shortly and confusely, betwene the last I and the vowel folowyng: albe it that in writtyng they expresse none suche, as these wordes, ribaudaille, faille,

gaillart, ueillart, billart, fueille, fille, cheuille, quocquille, ar-dillón, bastillón, covillón, and suche like, in redynge or spekynge they sounde thus: ribaudaillie, faillie, baillier, gailliart, ueilliart, billiart, fueillie, fillie, cheuillie, quocquillie, ardillion bastillion, covillion: but, as I haue sayd, if the i have an o commyng next before hym, in all suche wordes they sounde none i after the letter l, so that these nownes substantyues moylle, uoille, toille, and suche lyke be except from this rule. , . Except also from this rule wille whiche soundeth none i after his latter l." P. i, 7.—"There is two maner of wordes harde for to be pronounced in french. The fyrst is written with a double ll whiche must be souned togider, as lla, lle, lly, llo, Ilu, as in these wordes, bailla gave, tailla cutte, ceulle gader, feulle lefe, bally bayly, fally fayle, moullet white, engenoullet knele, mallot a tymer hamer, feullu full of leaves, houllu." G.-M. and R. have new characters for this sound; Pell. adopts the Portuguese form Ch. E. talks of " which " must be sounded liquid" in some words and "with the ende of the tongue" in others. But H. explains well; "when two, II, follow, ai, ei, oi, or ui, they be pronounced with the flat of the tongue, touching smoothly the roofe of the mouth: yong boyes here in England do expresse it verie well when they pronounce luceo or saluto: and Englishmen in sounding Collier, and Scottion; likewise the Italian pronouncing voglio, duoglio: for they do not sound them with the end, but with the flat of the tongue, as tailler to cut, treillis a grate, quenouille a distaffe, bouillir to seethe; where you must note that, i, [which he prints with a cross under it to shew that it is mute,] scrueth for nothing in words of ail! and oui!!, but to cause the two, *ll*, to be pronounced as *liquides*." H. p. 174. The transition from (li) through (l_J) to (lj) was therefore complete in H.'s time. The sound has now fallen

generally to (i, x, zh).

N mouillé, or G.N. Bar. 809 and note, is indistinct.—"Also whan so ever these .iii.letters gna, gne, or gno come to gyther, eyther in a nowne substantiue or in a verbe, the reder shall

sounde an i shortly and confusely, betwene the n and the vowel folowynge, as for: gaigná, seignéur, mignón, champignón, uergoigne, maintiéngne, charoigne, he shall sounde, gaignia, seignieur, mignion, champinion, uergoignie, charoignie, maintiengnie, nat chaungynge therefore the accent, no more than though the sayd i were vnsounded. But from this rule be excepted these two substantyves signe and régne, with their verbes signér and regnér, which with all that be formed of them the reader shall sounde as they be wrytten onely." P .- "The second maner harde to pronounce ben written with gn, before a nowell, as gna, gne, gni, gno, gnu. As in these wordes gagna wan, saigna dyd blede, ligne lyne, pigne combe, uigne vyne, tique scabbe, compagne felowe, laigne swell, mignon wanton, mignarde wanton, ye shal except many wordes that be so written and nat so pronounced, endyng specially in e, as digne worthy, cigne swanne, magna-nime hyghe corage, etc. They that can pronounce these wordes in latyn after the Italians maner, as (agnus, dignus, magnus, magnanimus,) have bothe the understandyng and the pronouncynge of the sayde rule and of the wordes." G.—M. & R. have distinct signs for this sound; see R. 826 under N. Pell retains gn.—"When you meete gn, melt the g with the s, as ognon mignon, pronounce it thus, onion, minion." E. — "We pronounce gn, almost as Englishmen do sound, minion; so melting, g, and touching the roofe of the mouth with the flat of the tongue, we say mignon, compagnon: say then compa gne, and not compag-ne. When the Italian saith guadagno, bisogno, he expresseth our gn, verie well." H. p. 198. It is not possible to say whether the original sound was (ni, ns) or (qi, qJ), but from H. it is clear that at the beginning of the xvii th century it was (nj), as now.

Final consonants were usually pronounced, L. 815, and all authorities write them, although we find in P. i, 27, "Whan so euer a frenche worde hath but one consonant onely after his last vowel, the consonant shalbe but remissely sounded, as auec, soyf, fil, beavcoup, mot, shalbe sounded in maner aue, soy, fi, beavcou, mo. how be it the consonant shall have some lyttell sounde: but if t or p folowe a or e, they shall have theyr distinct sounde, as chat, debdt, ducdt, combôt, kandp, decrét, regrét, entremét; and so of all suche other." These examples cross the modern practice of omission and sounding in several places.

H is a very doubtful letter, B. 805 and note 3. The question is not whether in certain French words H was aspirated, but whether the meaning attached to "aspiration" in old French was the same as that in modern French or in English. P. gives a list of 100 "aspirated" words. B. 67 says: "Aspirationis nota in vocibus Græcis et Latinis aspiratis, et in Francicam linguam traductis, scribitur quidem sed quiescit," except hache, hareng, Hector, Henri, harpe.

"Contra verò in vernaculis Gallicis scribitur simul et pronunciatur aspiratio, ut in illis quæ à Latinis non aspiratis deducuntur," and, as to the quality of the sound, he says: "aspirationem Franci quantum fieri potest emolliunt, sic tamen vt omnino audiatur, at non asperè ex imo gutture efflata, quod est magnoparè Germanis et Italis præsertim Tuscis obseruandum." B. 25. This seems to point to the modern hiatus.

S was constantly used as an orthographical sign to make s into s, to lengthen s and so on. Hence many rules and lists of words are given for its retention or omission, which may be superseded by the knowledge of the modern orthography, with the usages of which they seem precisely to agree.

The other consonants present no difficulty. We may safely assume B=(b), C(k, s), Ch(sh), D(d), F(f), G(g, zh), J(zh), suprà p. 207, K(k), L(1), P(p), Qu(k), R(r), S(s), T(t), V(v), X(s, z), Z(z).

The rules for the omission of consonants when not final, seem to agree entirely with modern usage, and hence need not be collected.

Sufficient examples of French phonetic spelling according to M., Pell., and R. have been given in the above extracts. But it is interesting to see the perfectly different systems of accentuation pursued by P. and M., and for this purpose a few lines of each may be transcribed.

From P. i, 63. "Example how the same boke [the Romant of the Rose] is nowe tourned into the newe Frenche tong.

Maintes gentes dient que en songes Ne sont que fables et mensonges Mais on peult telz songes songier Que ne sont mye mensongier Agns sont apres bien apparant, &c. Máintoíandíet, kansóvngos Nesovnkofábles e mansongos Maysovnpevttezsóvngosovngiér Kenesovnmyomansovngiér Aynsovntaprebienapparávnt, &c.

In M. the accent is illustrated by musical notes; each accented syllable corresponds to F of the bass, and each unaccented syllable to the G below, so that accentuation is held to be equivalent to ascending a whole tone. So far P. agrees with M., for he says (book 1, ch. 56) "Accent in the frenche tonge is a lyftinge vp of the voyce, vpon some wordes or syllables in a sentence, about the resydue of the other wordes or syllables in the same sentence, so that what socuer worde or syllable as they come toguyder in any sentence, be sowned higher than the other wordes or syllables in the same sentence vpon them, is the accent." The following are some of M.'s examples, the accented syllable being pointed out by an acute: "c'£t mon mâleur, c'£t mon frere, c'£t mon am' £ mon éspoer, c'£t ma grán'mere, c'£t mon bón compánon, ór et si bon ámy, jé

voes á toe, é toe á moe, il n'et pas fórt bon, ç'ét vn bién bon báton,

món compánon, á vizíon, mon confrere, vit sájement."
P. constantly admits the accent on the last syllable, M. says it is a Norman peculiarity, which is very disagreeable, and proceeds thus: "il faot premierement entendre qe james l'accent eleué, ne se rencontr' en la derniere syllabe des dissyllabiqes, ne polisyllabiges. E qe le ton declinant ou circonflexe, ne se treuue point q'en la penultime syllabe, si ell' et long' e la derniere brieue, pouruu q' Elle ne soet point terminé' en e brief: car allors il y peut auenir diuersité de ton, selon la diuers' assiete du vocable. . . . car il faot entendre qe le' monosyllabes en notre lange, font varier le' tons d' aocuns vocables dissyllabiqes, ny n'ont eu' memes aocun ton stable." fo. 133 a.

Palsgrave says: "Generally all the wordes of many sillables in the frenche tong, have theyr accent eyther on theyr last sillable, that is to say, sounde the laste vowell or diphthong that they be written with, hygher than the other vowels or diphthongues commyng before them in the same worde. Orels they have theyr accent on the last sillable save one, that is to say, sounde that vowel or diphthong, that is the last saue one hygher than any other in the same worde commyng before hym: and whan the redar hath lyftvp his voyce at the soundyng of the said vowel or diphthong, he shal whan he commeth to the last sillable, depresse his voyce agayne [compare suprà p. 181, note, col. 2], so that there is no worde through out all the frenche tonge, that hath his accent eyther, on the thyrde sillable, or on the forth syllable from the last, like as diuerse wordes haue in other tonges: but as I haue sayd, eyther on the very last sillable, orels on the next sillable onely. And note that there is no worde in the frenche tong, but he hath his place of accent certaine, and hath it nat nowe vpon one sillable, nowe vpon another. Except diversite in signification causeth it, where the worde in writtyng is alone." Book I. chap. lviii.

B. is very peculiar; he begins by saying: "Sunt qui contendant in Francica lingua nullum esse accentibus locum," which shews, in connection with the diversity of opinion between P. and M., that the modern practice must have begun to prevail. Then he proceeds thus: "Sunt contrà qui in Francica lingua tonos perinde vt in Græca lingua constituant. Magnus est vtrorumque error: quod mihi facilè concessuros arbitror quicunque aures suas attentè consuluerint. Dico igitur Francicæ linguæ, vt & Græcæ & Latinæ, duo esse tempora, longum vnum, alterum breue: itidemque tres tonos, nempe, acutum, grauem, circumflexum, non ita tamen vt in illis linguis obseruatos. Acuunt enim Græci syllabas tum longas tum breues, & Latinos idem facere magno consensu volunt Grammatici, quibus planè non assentior. Sed hac de re alias. Illud autem certò dixerim, sic occurrere in Francica lingua tonum acutum cum tempore longo, vt nulla syllaba producatur quæ itidem non attollatur: nec attollatur vlla quæ non itidem acuatur, ac proinde sit eadem syllaba acuta quæ producta & eadem grauis quæ correpta. Sed tonus vocis intentionem, tempus productionem vocalis indicat

Illa verò productio in Francica lingua etiam in monosyllabis animaduertitur, quæ est propria vis accentus circumflexis." B. therefore seems to confuse accent and quantity, as is the case with so many writers, although he once apparently distinguishes an accented from an unaccented long syllable, thus in entendement, he says that although the two first are naturally long, the acute accent is on the second; whereas it would be on the last in entendement bon, on account of the added enclitic. He lays down important rules for quantity, and without repeating them here, it will be interesting to gives his examples, marking those which he objects to. Finally B. notices the absence of accent in enclitics, and the final rising inflection in questions, observing, in accord with Meigret, "cuius pronuntiationis vsque adeò sunt observantes Normanni, vt etiam si nihil interrogent, sed duntaxat negent aut affirment aliquid, sermonis finem acutè, non sine aurium offensione pronuntient."

P.'s rules amount to placing the accent on the penultim when the

In modern French, and apparently in older French (suprà p. 331) there is nothing approaching to the regular fixed stress upon one syllable of every word, which is so marked in English, the Teutonic languages, and Sclavonic languages, in Italian, Spanish and Modern Greek. The nature of the stress and the effect on unaccented syllables differ also materially in different languages. In English the syllables following the principal stress are always much more obscure than those preceding it. This is not the case at all in In Modern Greek, the stress, though marked, is nothing like so strong as in English. Mr. Payne considers that the ancient Normans had a very strong stress, and that the syllables without the stress, and which generally preceded it, became in all cases obscure. With the extremely lax notions which we find in all ancient and most modern especially English writers, on the questions of accent, vocal inflexion, and stress, with its effect on quantity, it is very difficult to draw any conclusions respecting ancient practice. A thorough study of modern practice in the principal literary languages of the world, and their dialects, seems to be an essential preliminary to an investigation of ancient usage.

At the close of the xvIII th century Sir William Jones (Works 1799, 4to, i, 176) supposes an Englishman of the time to represent "his pronunciation, good or bad," of French, in the following manner, which he says is "more resembling the dialect of savages than that of a polished nation." It is from an imitation of Horace by Malherbe.

> Law more aw day reegyewrs aw nool otruh parellyuh, Onne aw bo law preeay: Law crooellyuh kellay suh boushuh lays orellyuh,

Ay noo laysuh creeay. Luh povre ong saw cawbawn oo luh chomuh luh couvruh Ay soozyet aw say lwaw,

Ay law gawrduh kee velly o bawryayruh dyoo Loovruh Nong dayfong paw no rwaw!

The interpretation may be left to the ingenuity of the reader, and the orthography may be compared to the following English-French and French English, in Punch's Alphabet of 25 Sept., 1869.

> M ay oon Mossoo kee ponx lweemaym tray Bowkoo ploo bong-regardong ker vraymong ilay! N iz é Ninglicheman! Rosbif!! Olraï! Milor! Dam! Comme il tourne up son Nose! O maïe aïe!!

Since the above pages were in type, I have been favoured by Mr. Payne with a full transcript of that part of the Mag. Coll. Oxford MS. No. 188, (supra p. 309, n. 1), which contains the 98 rules for French spelling, partially cited by M. F. Génin in his Preface to the French Government reprint of Palsgrave. This MS. is of the xv th century, but the rules appear to have been much older. They incidentally touch upon pronunciation, and it is only those portions of them which need here be cited. The numbers refer to the rules.

"1. Diccio gallica dictata habens primam sillabam vel mediam in E. stricto ore pronunciatam, requirit hanc literam I. ante E. verbi gratia bien. chien, rien, piere, miere, et similia." Here is a distinct recognition of a "close e," and the examples identify the sounds in père, mère, now open, but close according to the orthoepists of the xvi th century, with the vowel in bien, chien, rien, which therefore tends to confirm the opinion expressed above p. 829, that en was not then nasalized in the modern sense. "2. Quando-cumque hec uocalis. E. pronunciatur acute per se stare debet sine huius .I. processione verbi gratia .beuez, tenez, lessez." As each example has two syllables in e, it is difficult to say whether the rule applies to one or both and hence to understand the meaning of "acute e." The last e in each is generally regarded as "masculine," but the first in "beuez, tenez," was the the "feminine" and in "lessez" the "open" according to other writers. Nor is this obscurity much lightened by the following rules: "3. Quamvis E. in principio alicuius sillabe acute pronunciatur in fine anterioris sillabe I. bene potest preponi vt bies. priez. lez. affiez &c." Here if bies = biais, we have the same mixture of masculine and open e as before. The two next rules seem to call the "feminine e," that is, the modern e mute, a "full e."
"4. Quandocumque adiectiuum femenini generis terminat in .E. plene pronunciata geminabit ee. vt tres honouree dame. 5. Quamvis adiectiuum masculini generis terminet [in?] E plene pronunciatum non geminabit .E. vt treshonoure sire nisi ad differenciam vne Comitee anglice a shire. Vu comite anglice a counte...... 6. Quamvis adiectiuum masculini generis non terminet in E. Vt vn homme vient. homme adiectiuum tamen feminini generis terminabit in simplici cum

se implere [?] pronunciatur vt meinte femme vne femme." There can be no doubt that e feminine was fully pronunced, but how far it differed from the e "stricto ore," and e "acute pronunciatum," it is not possible to elicit from these curt remarks. It is observable that eo and e are noted as indifferent spellings in certain words now having the "muto-guttural e." "8. Item ille sillabe. ie, ce. ieo. ceo. indifferenter possunt scribi cum ceo vel ce sine o."

S. "12. Omnia substantiua terminancia per sonum .S. debent scribi cum .S. vt signurs lordes. dames ladyes." This plural s was therefore audible, but the writer immediately proceeds to point out numerous exceptions where z was written for s, as 13. in gent, plural gents or gentz, 14. in filz, 15. or z for s in deux loialz, 16. or the common contraction 9 for us in no⁹=nous, 17. in nos vos from noster vester, either s or : may be used. In all these cases it would however appear that (s) was actually heard, and if any meaning is to be attached to "aspiration" must suppose that an (s) was sounded in the following case: "18. "Item in the following case: "18. "Item quandocumque aliqua sillaba pronun-ciatur cum aspiracione illa sillaba debet scribi cum s. et t. loco aspiracione verbi gratia est fest pleist." The next is obscure. "19. Item si .d. scribitur post .E. et .M. immediate sequitur d. potest mutari in s." In 21. 93. and 94. we find s mute in fismes, durerne, mandasmes, and probably by 96. in feist toust, and possibly also in: "73. Item in verbis presentis et preteriti temporum scribetur. st. a pres I e. o. v. com bap-tiste fist est test lust &c.," though this partially clashes with 18.

U after L. M, N.

"23. Item quandocumque hec litera l. ponitur post A. E. et O. si aliquod consonans post l. sequitur l. quasi v. debet pronunciari verbi gratia. malme

mi soule. loisiment bel compaigneoun." This does not mean that al, was pronounced (ay), but that it was pronounced as au was pronounced, and this may have been (ao) as in Meigret or (ee) as in other orthoepists of the sixteenth century. With this rule, and not with S, we must connect: "67. Item aliquando s. scribitur et v sonabitur um ascun sonabitur acun," aucun ? as M. Génin transcribes. "36. Item iste sillabe seu dicciones quant grant Demandant sachant et huiusmodi debent scribi cum simplici .n. sine .v. sed in pronunciatione debet .v. proferri &c." This can scarcely mean that an was pronounced as if written aun with au in the same sense as in the last rule It must allude to that pronunciation of an as (aun) to which Palsgrave refers and which introduced an English (aun), suprà p. 826, col. 1, and therefore confirms the older English accounts.

Oy and E.

"26. Item moy. toy. soy. possunt scribi cum e. vel o. per y. vel I indifferenter. — 58. Item in accusatiuo singulari scribetur me in reliquis casibus moy." This, together with Barcley's mames of the letters, p. 805, is well illustrated by the curious passage from Sylvius, p. 824.

Final Consonants.

" 27 Item quandocumque aliqua dictio incipiens a consonante sequitur aliquam diccionem terminantem in consonante in racionibns pendentibus [in connected phrases | consonans interioris diccionis potest scribi. Sed in proaunciacione non proferri vt a pres manger debet sonari a pre manger.— 29. Item l. M. N. R. T. C. K. quamvis consonans subsequitur bene possunt sonari per se vel per mutacionem litere."

Does this mutation refer to the following? "51. Item scias quod hec litere C. D. E. F. G. N. P. S. et T. Debent mutari in sono in strictura c. ante uocalem vt clerici. clers et debet in gallico clers rudi homines ruds hommes et debet sonari ruz hommes. bones dames debent bon dames et tanc .u. sonari solempne vyis hounte [homme ?] loget vis homme et sic De alijs.—52. Item quando ista diccio graunt sight magnitudinem adjungitur cum feminino genere ita vt e sit sequens t. mutatur in D. vt grande dame grande charge." Observe this xv th century use of English sight for great, as an adjective.—"53. Item quando grant adiungitur masculino generi vt grant seignour vt quando signat confessionem non mutabitur t. in D. quamuis R. sequitur vt iay grante."

GN

"39. Item quandocumque hec litera .n. scribitur immediate post g. quamuis sonet ante g. non debet immediate prescribi vt signifiant &c.—40. Item si .n. sonat g. et non subsequitur bene potest A immediate prescribi.—41. Item seignour ton seignour son seignour.—92. Item quandocumque .n. sequitur I in media diccione in diuersis sillabis g debet interponi vt certaignement benignement &c. sed g non debet sonari." All these seem to refer awkwardly and obscurely to (nj).

GU, QU.

"46. Item qi qe quant consueuerunt scribi per k sed apud modernos mutatur k. in q. concordent cum latino I k. non reperitur in qu qd' quis sed I.—54. Item posr G. vel E. quamuis scribatur non debet sonari vt quatre guerre. Debent sonari qatre gerre."

Words Like and Unlike.

"50. Item diversitas stricture facit Differentiam aliquam quamuis in voce sint consimiles verbi gratia ciel seel seal celee oeele cov quoy moal moel cerf serf teindre. tenir attendre [Génin has: teindre tendre tenir attendre] esteant esteyant aymer amer foail fel stal [Génin : feal] veele viel veile veile ville vill' [Génin : veele viel veile ville vill] brahel breele erde herde euerde essil huissel assel nief neif suef noef [Génin: soef] boaile. baile bale balee litter litere fornier forer forier rastel rastuer mesure mescire piel peel berziz berzi grisil greele grele tonne towne neym neyn." The transcript was made by Mr. Parker of Oxford, but the proof has not been read by the original; Génin certainly often corrected as he edited; here the transcript is strictly followed .- "86. Item habetur diuersitas inter apprendre prendre et reprendre oez oeps vys et huys kunyl et kenil. —90. Item habetur diuersitas inter estreym strawe et estreyn hansel.—91. Item inter daym et dayn.'

These seem to be all the passages bearing upon the present dis-

cussion. They are not numerous, nor very important, nor always very intelligible, but they seem all to point to such a previous state of pronunciation of French, as our English experience would lead us to suppose might have preceded that of the xvi th century as so imperfectly colligible from the writings of contemporary orthoepists.

It should also be mentioned that the Claudius Holyband whose French Littelton is described on p. 227, note, under date 1609, is called Holliband in a previous edition of the same book, dated 1566, in the British Museum. This is 3 years before Hart's book, and as this older edition also contains the passage cited suprà p. 228, note, saving that the English seem to Frenchmen to call their u like you. and to name q kiou, whereas the Frenchmen pronounce like the Scotch u in gud, while Hart gives in as the English sound, and identifies it with the Scotch and French vowels (see especially p. 796, note, col. 1, [88])—we are again led into uncertainty as to the sound that Hart really meant, and to consider that the (iu) sound, though acknowledged by no orthoepist before Wilkins, may have penetrated into good society at a much earlier period. Again, the confusion of spelling in Holyband and Holliband, reminds us of Salesbury's identification of holy and holly (supra p. 779, 1. 2 from bottom). And lastly it should be mentioned that this name is but a translation, and that the author's real name, as he writes it elsewhere, is Desainliens (under which his works are entered in the British Museum Catalogue) being the same as Livet's de Saint-Lien, or à Santo Vinculo (suprà p. 33, l. 8 from bottom). The Latin work there cited is not in the British Museum, but as its date is 1580, and the 1566 edition of the French Littelton there preserved does not differ sensibly from that of 1609 here quoted, this occasions no incompleteness in the present collections from French Orthoepists of the xvi th century.

§ 4. William Bullokar's Phonetic Writing, 1580, and the Pronunciation of Latin in the XVI th Century.

Bullokar concludes his Book at Large with a prose chapter between two poetical ones. The poetry is so bad that the reader will be glad to pass it over. The prose contains a little information amidst an overpowering cloud of words; and as a lengthened specimen of this important contribution to the phonetic writing of the xv1 th century is indispensable, I shall transliterate his Chapter 12. There is some difficulty in doing so. Long a, e, y, o are lengthened by accents thus a, e, y, o when they apparently mean (aa, ee, ii, oo), and i is said to be lengthened by doubling as iy, yi, when it would also be (ii) according to the only legitimate conclusion at which I could arrive in treating of Bullokar's pronunciation of this sound, pp. 114, 817, note. The mention of this combination iy, yi, which amounts to a reduplication of i, although I have not found any instance in which it had been used by Bullokar, and the constant omission of any distinction between long and short i, confirm the

former theory that he called long i (ii). In the present transcript only such vowels are marked long as Bullokar has actually so marked, or indicated by rule, as (uu, yy). Bullokar's doubled consonants, though certainly pronounced single, have also been retained. Bullokar has also a sign like Greek ζ which he uses for both s and s, but which he identifies with s. It will be transliterated (s) or (s) according to circumstances. Bullokar's grammatical "pricks and strikes" are entirely omitted. They have no relation to the sound, and are quite valueless in themselves, although he laid great store by them. On the other hand I have introduced the accent mark, for which he has no sign. The title of the chapter is left in ordinary spelling.

ENGLISH PRONUNCIATION OF LATIN IN THE XVITH CENTURY.

Information respecting this subject is given incidentally by Palsprave, Salesbury, Smith, Bullokar and Gill. Palsgrave generally illustrates the French sounds by the Latin, "when pronounced aright" (suprà p. 59), implying that there was a wrong, and therefore perhaps a usual pronunciation, which is the one we most desire to learn. By combining these authorities the result seems to be as follows.

A aa, a, Æ ee, B b, C k, s, CH k, D d, dh, th, E ee, e, F, f, G g, dzh, GN qn, H π , I ei, i, J dzh, K k, L l, M m, N n. NG qg, O oo o, u, Œ ee, P p, QU k ω , R r, S s, z, T t, th, TH th, U, yy, u, V v, X ks, Y=I, Z z.

¹ By omission of the discritics, this word is misprinted (lou).

A may have been (a, a, æ), but probably (a) only.

Æ, Œ Palsgrave says (i, 10) "be written in latine and nat sounded," i.e. I suppose, not sounded as diphthongs. It seems clear from Smith (supra p. 121) that the real sound of Æ, and therefore probably of Œ, was (ee).

C was (k) before a, o, u and (s) before e, i according to

present custom, and probably (s) before æ, æ.

CH=(k) according to Bullokar, suprà p. 842, l. 19.

D. The only proper sound was (d), but we find Palsgrave saying of French D (i, 30): "D in all maner thynges confermeth hym to the general rules aboue rehersed, so that I se no particular thyng wherof to warne the lernar, save that they sounde nat d of ad in these wordes, adultére, adoption, adoulcér, like th, as we of our tonge do in these wordes of latine ath athjuuandum for ad adjuuandum corruptly." I have assumed this th to mean (dh) as being derived from d. But Salesbury writes (kwith) for quid.

E. Besides the regular sound of (ee, e), Salesbury shews that (ii) had crept in occasionally, compare (liidzh it) = legit, p. 767. I

do not find this mentioned by any other authority.

G=(g) before a, o, u and (dzh) before e, i, as at present. Both Salesbury and Bullokar note and stigmatise the use of (qn) for GN,

which seems to have been in general use.

I short =(i) throughout. I long =(ei) in Salesbury, (ei) in Gill most probably. Whether Bullokar said (ii) or (ei) depends on his English pronunciation of long I. It is to be observed that he as well as Smith (p. 112), does not admit the sound of (ii) in Latin. Hence Bullokar's sound of long i must have been quite distinct from (ii), as (ii, ii) are at this day kept quite distinct in Iceland and Teviotdale, in both cases perhaps by inclining (ii) towards (ee), p. 544.

T, usually (t), but when final often (th) as (am'ath) amat, according to Salesbury, see D. Palsgrave also finds it necessary to say, in reference to the French word est: "if the next worde following begyn with a vowell, it shall be sounded et: but neuer est sounding s, nor eth, soundynge t like th, for t hath neuer no suche sounde in the frenche tonge," (i, 44), which seems to be directed

against this Latin usage.

TH=(th) see suprà p. 842, 1. 19.

U vowel, when long seems to have been generally (yy) supra p. 841. But Palsgrave seems to consider this wrong, and to prefer (uu), supra p. 149. The short vowel could have been nothing but (u, u).

Examples.—Latin spelling in Italics, pronunciation in Roman

letters.

Salesbury gives: agnus aqnus, amat amath, dederit dederith, dei deerei, dico dei ku, ego egru, ignis iqnis, Jesu Dzheerzyy, legit lii dzhith, magnus maqnus, qui kwei, quid kwith, sal saul, sanctus santus, sol sooul, tibi tei bei, tollis toourlis, tu tyy, vidi veidei, but objects to every one of these pronunciations.

Bullokar writes, translating his symbols literatim: Cicero rheto-

rica singulos vicit, Sis ero rethor ika siq gyylooz vi sit, corvus non voce cucullum korvus non vose kyykul·lum, p. 4. Georgius Gigas et Gilbertus gerunt gladium ad extinguendum gibbum germinantem in gula Dzheor dzhius Dzhi gas et Gilbertus dzherunt gladium ad ekstiqguen dum gib·bum dzherminan tem in gyy'la, p. 5. Injustus jejunat jactuosè non juxta juramentum Johannis indzhus tus dzhedzhyynat dzhaktyyo ze non dzhuks ta dzhyyramen tum Dzhohannis p. 5. Invisus miser non delectatur placidis musis invizus mizer non delekta tur plasidis myy zis, p. 6. Vitiosi judicium fugiunt ob punitionem stultitie suz visio zi dzhyydisium fyy dzhiunt ob pyynisionem stultisiee syy'ee. Unus vestrum cumulavit hunc acervum yy'nus ves'trum kyymyyla vit nuqk aser'vum, p. 7. Thraso, Thales, Thessalia, Thraso, Tha'les, Thessa'lia. Ignarus, magnus, lignum, iqna'rus, magnus, lignum, iqna'rus, magnus, lignum. Bullokar in these examples has neglected to use his accents which mark length.

Gill writes a few Latin names thus, the numbers refer to the pages of his Logonomia: Julius Cæsar Dzhyy lius Se zar 43. Cicero Siz eroo 43, 85. Terentia Terentia 84. Crassus Kras us 85. Hippia Hip ia 85. Sylla Sil a 85. Quintius Kwin sius 86. Venus Ven us 100. Cynthia Sin thia 101. Phoebs Fee be 101. Charissa Karis a 101. Corydon Koridon 103. Pyrocles Piroo kles 108.

The use of (ei) for long I, seems to guarantee the old use of (ii), which may have been Bullokar's pronunciation. And the use of (yy) for long U, seems to confirm the conjecture of its old use in the same sound, supra p. 246, rather than (uu), because as (ii) changed into (ei), so would (uu) have changed into (ou), whereas (yy) is naturally preserved. This confirms to some extent the remark on p. 583, note 8. The only other important point is the condevelopment of si-, ti- before a vowel, into (shi-), hereby confirming the absence of this development in English, supra p. 214.

§ 5. Alexander Gill's Phonetic Writing, 1621, with an examination of Spenser's and Sidney's Rhymes.

Dr. Gill, born in the same year as Shakspere, and occupying the high literary position of head master of St. Paul's School, London, at the time of Shakspere's death, must obviously be considered as the best single authority for the pronunciation of the more educated classes in Shakspere's lifetime. Hence it is necessary in these examples to give prominence to what has fallen from his pen. We have had frequent occasion to lament that Dr. Gill has not explained the value of all his signs with sufficient clearness. The reasons why I suppose his j to have been (ai), and his d and au to have been (AA) will be found on pp. 115, 145.

The greatest difficulty in transcribing Dr. Gill's phonetic passages arises from the carclessness of the printing. Dr. Gill has furnished a list of Errata, which he requests may be corrected before reading, but in some instances these contain no corrections at all, and they

are exceedingly deficient. The commencing and concluding observations create difficulties:

"Syllabæ quæ natura sua communes sunt, possunt etiam indifferenter per vocales longas aut breves describi, vt (shal) aut (shaal), (dans) aut (daans), (bi bii, ded deed, whoom whuum, modher, mudher, sai saai, mai maai, &c.) Quædam accentu variant, vt ibi dictum est: itaque in his nil titubabis. Errata leuiora præteribis: cognita et agnita sic restitues. Quinetiam characterum penuriam in I, pro J, quoties opus refarcies. Denique capite 25 et deinceps, accentuum notatio, longarum vocalium quantitati veniam inveniet."

It is evident that owing to these errors much doubt must be felt by a reader of the xixth century on many of the very points respecting which precise information is desirable. I had endeavoured to correct errors by a reference to other occurrences of the same word. But after much consideration I determined to give a literal transcript of the text as it stands, as I have done for Hart and Bullokar, correcting only the errors marked in the errata and supplying the accent mark (·), so that the reader will be able to form his own opinion. I have used (i) for the short i, believing it to have been the sound intended by Dr. Gill. See also § 7 of this Chapter. But I have let (i) stand for short i when it appeared to be a misprint for i=(ii).

Almost the only examples of phonetic writing as such, given by Dr. Gill, are Psalms 62, 67, 96, 97, 104 according to the Authorized Version, and as that version had only been published ten years when his book appeared, these transcripts possess a peculiar interest and are given at length.

The poetical examples are chiefly adduced to give instances of rhetorical figures, and are principally taken from Spenser and Sidney,-not one line from Shakspere being quoted throughout the book, which need not excite surprise, as the first folio edition of Shakspere's plays did not appear till two years after the publication of Gill's second edition. There are a few epigrams from Harrington, a poem of Withers, a song of Ben Jonson, and one or two other songs cited. I have thought it best to give all the longer quotations from Spenser's Faerie Queen in the order in which they occur in the poem, and to collect the other quotations according to the authors. We have thus a very tolerable collection of literary examples differing materially from the dry sticks furnished by Hart and Bullokar. Their main interest, however, consists in their being written phonetically by a man who was contemporary with nearly all the writers, and who therefore was able to furnish us with the pronunciation of English current in their time. We shall not go far wrong if we read like Dr. Gill. At the same time he clung to the older form of pronunciation, not admitting Harts (ce) for ai, although he does allow (deseev, konseev) which were the current pronunciations of the xvII th century, and apparently admitted (vi, AA) which properly also belong to that period. It will

be found that his quotations from Spenser often differ from Mr. Morris's (Globe) edition, sometimes designedly, sometimes perhaps from carelessness.

How far Dr. Gill's pronunciation represented that of Spenser, Sidney, and the other authors themselves, is an interesting question; but there is no direct means of answering it. The only path open is an examination of their rhymes. Accordingly Spenser's and Sidney's rhymes will be considered immediately after the specimens which Gill has given. And in the last section of this chapter not only Shakspere's rhymes, but also his puns will be examined for the purpose of determining his individual pronunciation.

AN EXAMINATION OF SPENSER'S RHYMES.

An inspection of the examples of Spenser's pronunciation as given by Dr. Gill, pp. 847-852, shews that as Dr. Gill read them the rhymes were not unfrequently faulty.1 If then this authority is to be trusted we have entirely left the region of perfect rhymes, and have entered one where occasional rhymes are no guide at all to the pronunciation, and very frequent rhymes are but of slight value. Still it seemed worth while to extend the comparison further, and see how far Spenser in his rhymes conformed to the rules of pronunciation which we gathered from contemporary authorities in Chap. Before, however, giving the results of an examination of all the rhymes in the Faerie Queen, I shall examine the bad rhymes in contemporary poems of considerable reputation, in order that we may see and understand what limits of approximation in the sound of rhyming vowels and even consonants, some of our best versifiers deem to be occasionally or even generally sufficient, that is, how closely they approach to final or consonantal rhyme (p. 245) on the one side, and assonance on the other. For this purpose I have selected Thomas Moore and Alfred Tennyson. Every one admits that Moore was at least a master of the mechanical part of his art. His lines are generally rhythmical, and his rhymes good, as might be expected from a song writer with a delicate perception of music. Of his writings I choose the most elaborate, the Loves of the Angels, and Lalla Rookh, and note all the rhymes which are false according to my own pronunciation. Of Tennyson, who is also a master of his art, I select the In Memoriam, as his most careful production in regular rhymed verse, and do the like with it. The following are the results.

Mode of Reference.

FW 1, 2 Fireworshippers, part 1, paragraph 2. LA prol., Loves of the Angels, prologue. LA 2, 8. Do., story 2, paragraph 8. LH 6, Light of the Harem, paragraph 6.

PP 24, Paradise and the Peri, paragraph 24.
VP 3, 17, Veiled Prophet, part 3, paragraph 17.
T 28, Tennyson's In Memoriam, section 28. Tep. Do. epilogue.

The examples are arranged according to the sounds, which, according to my pronunciation, are different, but must have been identical, according to the pronunciation of the poets, if the rhymes are perfect.

Some of these rhymes, as may be seen, are justifiable by diversities of pronunciation. Others are really rhymes of long and short vowels. But others cannot be made into rhymes with the help of any known received pronunciations. Thus:-1) bar war, guard lord, clamber chamber, amber chamber, have grave, heaven given [very common], heaven even [also common], death beneath, death sheath, &c. [common], earth forth, one gone, rough off, above grove, come home [very common], love grove &c., one alone &c., blood, good &c., flood stood &c., thrush push, blood food, come tomb, love move &c., curse horse, word lord so that as we have: guard lord, we might have: word guard!] word sword, Christ mist, I joy, brow below, down grown &c., now low, loss gross, lost boast &c., mode good, hope group: -2) breathe wreath, breathes sheaths, bliss his, else tells, house s. boughs &c., ice flies &c.-are about as bad rhymes as can be, the first division being purely consonantal rhymes, and the second mere assonances. The rhymes of an unaccented and accented syllable are all bad, but the double use of unaccented final -y, -ies, to rhyme either with (-ii, -iiz) or (-oi, -oiz) at the convenience of the poet is really distressing; compare: agony I, agonies sees; energies cries, energies ease; harmony die, harmonies breeze; mysteries replies, mysteries these &c. It is at once evident that any attempt to derive the pronunciation of the xix th century from an examination of modern rhymes must utterly fail.

Now the extended examination of Spenser's rhymes above named, leads to a similar result. It would not only be impossible from them to determine his pronunciation, but his usages cross the known rules of the time, even if we include Hart's varieties, so multifariously, that the poet was evidently hampered with the multiplicity of rhyming words which his stanza necessitated, and became careless, or satisfied with rough approximations.

not the language of the xvi th century, but aped, without reflecting, that of the xv th. The contrast between the genuine old tongue of Chaucer, or modern tongue of Shakspere, and the trumped up tongue of Spenser, which could never have been spoken at any time, is painful. Coming to the examination of Spenser's rhymes fresh from those of Chaucer, the effect on my ears was similar to that pro-

The language in which he wrote was artificial in itself.

duced by reading one of Sheridan Knowles's mock Elizabethan English dramas, after studying Shakspere. It is sad that so great a poet should have put on such motley.

¹ The scheme of his rhymes is a b a b b c b c c, necessitating 2, 3, and 4 rhyming words.

Sometimes, either the author or the printer,—it is impossible to say which, but in all subsequent citations I follow Mr. Morris, seems to think he can make a rhyme by adopting an unusual spelling. At other times unusual forms of words, long obsolete or else provincial, are adopted, and different forms of the same word chosen to meet the exigencies of the rhyme.

Occasionally, but not very often, Spenser indulges in unmistakable assonances, or mere consonantal rhymes, or anomalies, which it is very difficult to classify at all, as in the following list.

Anomalies, Eye Rhymes, Assonances.

The above examples, which it does not require any historical knowledge to appreciate, are amply sufficient to prove that Spenser allowed himself great latitude in rhyming, so that if we find him continually transgressing the rules of contemporary orthoepists, we cannot assume that he necessarily pronounced differently from all of them, or that he agreed with one set rather than another. however we come to examine other words which he has rhymed together, where his rhymes, if they could be relied on would be valuable orthoepical documents, we find not only apparent anticipations of usages which were not fixed for at least a century later, but such a confusion of usages that we cannot be sure that he was even aware of these later pronunciations. Hence his rhymes not only do not show his own custom, but they do not justify us in supposing that the more modern practice had even cropped up in stray cases. The principal conclusion then to be drawn from such an examination is that we have left the time of perfect rhymes, exemplified in Chaucer and Gower, far behind us, and that beginning at least with the xvith century we cannot trust rhymes to give us information on pronunciation. The previous examination of the rhymes of Moore and Tennyson shew that the same latitude yet The esthetic question as to the advantage of introducing remains. such deviations from custom does not here enter into consideration. But it would seem sufficiently evident that they arose at first from the difficulty of rhyming, and there is no doubt that they remain in the majority of cases for the same reason. Their infrequency, and the mode in which they are generally disguised by othography, or apparently justified from old usage, would seem to imply that the poet did not in general consciously adopt them, as musicians have adopted and developed the use of discords, in order to produce a

determinate effect. Hudibras is of course an exception, and all burlesque poems, where the effect intended is evident and always appreciated, but is not exactly such as is sought for in serious poems.¹ The following examples from Spenser may seem over abundant, but the opinion is so prevalent that old rhymes determine sounds, and Spenser's authority might be so easily cited to upset the conclusions maintained in the preceding pages on some points of importance, that it became necessary to show his inconsistency, and the consequent valuelessness of his testimony, by extensive citations. The arrangement as in the case of the modern poets is by the sounds made equivalent by the rhymes, but Dr. Gill's pronunciation, as determined by his general practice is substituted for my own. At the conclusion a few special terminations and words are considered, which I could not conveniently classify under any of the preceding headings.

1 Those who wish to see the ludicrous and consequently undesirable effect which is often produced by such false rhymes, should consult a very amusing book called: Rhymes of the Poets by Felix Ago. (Prof. S. S. Haldeman), Philadelphia, 1868. 8vo. pp. 56. These rhymes are selected from 114 writers, chiefly of the xvII th and xvIII th centuries, and were often correct according to pronunciations then current. The following extract is from the preface: "It is better to spoil a rhyme than a word. In modern normal English therefore, every word which has a definite sound and accent in conversation, should retain it in verse; great should never be perverted into great to the ear, sinned into signed, grinned into grind, or wind into wind" (wind, weind). "A few words have two forms in English speech, as said, which Pope and Th. Moore rhyme with laid and head; and again, which Shakespeare, Dryden, and Th. Moore rhyme with plain and then, and Suck-ling with inn." "The learned Sir William Jones is the purest rhymer known to the author, questionable rhymes being so rare in his verse as not to attract attention. His ARCADIA of 368 lines has but forlorn and horn; god, rode; wind, behind; mead, reed

(mead of meadow being med and not meed)." In a foot note he cites the rhymes: mead head, meads reeds Dryden, tread head Herrick, mead reed Johnson. "Caissa of 334 lines, Solima of 104, and Laura of 150, are perfect. The Seven Fountains, of 542 lines, has only shone—sun, and stood—blood. The Enchanted Fruit, 574 lines, has wound—ground twice, which some assimilate. The few questionable rhymes might have been avoided; and these poems are sufficiently extended to show what can be done in the way of legitimate rhyme. Versifiers excuse bad rhymes in several ways, as Dr. Garth [a.d. 1672-1719]—

Ill lines, but like ill paintings, are allow'd To set off and to recommend the good: but it is doubtful whether the Doctor would thus have associated allow'd and good, if he could have readily procured less dissonant equivalents. Contrariwise, some authors make efficient use of what to them are allowable rhymes, and much of the spirit of Hudibras would be lost without them.

Sir Philip Sidney apparently read ai as (ee) in Hart's fushion, see below p. 872, Spenser may have adopted this pronunciation also, and then his rhymes of ai, a, were faulty. On account of the laxity of Spenser's rhymes it is impossible to say whether this was a rhyme or an assonance, that is, whether the -tion was pronounced as -shion. I am inclined to think not. See the remarks on Shakspere's rhyme: passion fashion, below § 8.]

Sir Philip Sidney's Rhymes.

Gill cites several passages from Sir Philip Sidney (a. D. 1554-86) who was the contemporary of Spenser (a.D. 1552-99). Mr. N. W. Wyer has kindly furnished me with a collection of rhymes from Sir Ph. Sidney's version of the Psalms, which I have arranged as follows. It will be seen that Sidney was a more careful rhymer than Spenser. But he seems to have accepted the mute gh, Hart's pronunciation of ai as (ee), the inexpediency of distinguishing (oou) and (oo), and the liberty of making final -y=(i) rhyme with either (ii) or (ei). His other liberties are comparatively small, and his imperfect rhymes very few. In the following list the numbers refer to the numbers of the psalms in which the rhymes occur. The arrangement is not the same as for Spenser's rhymes, but rather alphabetical.

Apparently imperfect Rhymes.

Cradle able 71, is a mere assonance. Hewne one 80, is difficult to understand, unless hewn like shewn, had occasionally an (00) sound.

Abandon randon = random 89, the imperfection is here rather apparent than real, as randon is the correct old form.

Proceeding reading 19, it is very possible that in precede, succeed, proceed, the e was more correctly pronounced (ee), or at least that a double pronunciation prevailed. See Spenser's rhymes, p. 868, col. 1, under (ee) = (ii).

p. 868, col. 1, under (ee) = (ii).

Share bare ware = wear 35, this must be considered a real bad rhyme.

A

Long and short: am game 22, am came 37, forsake wrack 37, inviolate forgate estate 78, tary vary 71, grasse place 37, hast last 9, barre are 82, farr are 88, 103, past haste 88, wast = waste plast 31, plac'd hast 5. 8, plast fast 31, cast defast 74, tast caste 18, orecast tast 16, hath wrath 2.

Have rhymes with: grave 5. 16, crave 16, save 28. 33, wave 72.

W does not affect the following a, in: wast last 9, was passe 18, flashed washed 66, quarrell apparrell 89, wander meander 143.

AI.

Uncertain, (ai) or (ee): praies = preys staies tay say ay 28, afraid laide 3.

Probably imperfect, ai = (aa): praise phrase 34, repaire are 91.

Nearly certain ai = (ee), since even Gill writes conceit with (ee), though he admits (ei, eei) in they obey: they saye 3, conceite waite 20, waite deceite 38, conceite seate 40, obey daie 45.

Quite certain ai = (ee), seas laies 33, sea survey 72, sea way 136, praise ease 10, daies ease 37, pleased praised 22, praise please waies raise 69, staine cleane 32, meane vaine 2, chaine meane 28, streames claims 32, waite greate 26, waiteth seateth 1, disdayning meaning 37, bereaves glaives leaves 78, heyre were 90, and hence: aire heire 8, while the rhyme ai = (e) in plaint lent 22 strongly confirms the belief that the above were natural rhymes to Sidney's ear, and consequently the co-existence of (ai, ee) for the sound of as in the xvi th century among polite speakers, notwithstanding Gill's denunciation.

AU, AW.

The following few rhymes do not establish anything, but they serve to confirm the orthoepist's dictum of the development of (u) after (a) when (I) or (n) follows: crawl'd appal'd 74, shall appall 6, all shall 2, vaunting wanting 52, chaunces glances 52.

E

Probably Sidney said (frend) and not (friind) suprà p. 779, as in: frend wend 38, frend defend 47.

EA.

The confusion of ea and e short in spelling, and the rhymes of similar orthographies, confirm the general pronunciation of ea as (ee): greater better 71, greate sett 21, greate seate 48, distresse release 74, encreast opprest 25, rest brest neast 4, head spred 3, treads leads 1, leade tread 25, treadeth leadeth 84, seate freat 100, 102, encrease presse 144, pearced rehearsed 22, break weak, 2

The influence of r is felt in the following words, where es or s would be naturally pronounced (ee), but was un-doubtedly at times (ii), p. 81, and poets may have taken the liberty of using either pronunciation as best suited their convenience: heere teare, 55, here nere 91, deere heare appeare 20, heare ap-peare 6. 67, eare feare appeare where 55, appeares yeares endeares spheares 89, neere cleere 34, there heare 102, beare there 55, feare bear 34, beare were 22, deere were beare cleare 55, bears wears = were 48, eare outbears appeare weare cheere feare weare 49, sphere encleare 77, heire forbeare mere speare 55.

ER.

The rhymes: heard barr'd 34, guard heard 116, which certainly corresponded to a prevalent, though not generally acknowledged pronunciation, properly belong to the same category as: parts harts = hearts 12, avert heart 51, desert part hart 6, avert hart 119, preserved awarved 37, art subvert 100. 102. See **suprà** p. 871, c. 1, under *heard*.

EU, EW, IEW, U.

These all belong together. The orthospical distinctions (yy, eu) seem to have been disregarded. Whether they were sunk into (iu, su) cannot be determined, and is perhaps not very likely at coearly a period. See however the remarks on Holyband's observation in **3666**, suprà p. 838: true adieu 119, view pursue 46, ensue grew new view 60, pursue dew new 105, you pursue 115, ron true renewe 31, renew ensue you 78, knew true rue 18, new you 96, grew Embrue 78, subdue brew 18, chuse re-#mee 89.

We know that the guttural was only Saintly pronounced (suprà p. 779) although even Hart found it necessary to Indicate its presence by writing (H).

The poets of the xvi th century however generally neglected it in rhyming as: prayeng weighing 130, waigh alway alley stay 55, pay weigh 116, surveying waighing 143, day decay stray waigh 107, laide weighd 103, delighted cited 1, sprite wight 9, sight quight 25, quite sight spight light 69, wight quite 39, bite spight 3, sprite might 13, high thy 43, high awry 119, eye high 131, I high 46, high dy cry 9, though goe 43, wrought thought caught 9, aloft wrought 77. GN.

After a vowel the g appears to have been regularly mute as: Assigned kind find minde 44, assigned enclined 11, remaineth raigneth 3.

There was probably some little uncertainty in the pronunciation of i in the following words, as we know that Gill had great doubts concerning build: build shield 35, shield fil'd yeeld 28, field reconcil'd 60, theevery delivery

75, give releeve greeve 82.

The uncertainty of the final which Gill gives both as (ai) and (ii), is shewn by the following examples which are quite comparable with Spenser's, p. 869, col. 1.

be constancy 34.

High apply perpetually 9, unceassantly cry 77, eye effectually 115.
Sacrifie ly 4, magnify hie 9, fly
slippery 35, misery supply 79, memorie
flie I orderlie 50, injuries suffice applies

lies 58, memory relye 105;—but: be chivalry 20.

Jollity eye 31, jolities tiranize 94, veritie lie 31, verity hie 57, ly iniquity high vanity lie 4, high try equity 6;-but: infirmity me 41, see vanity 39, equity me thee 4, be vanity 39, thee eternity 21, be iniquity he 36, bee thee

see degree me treachery free enemy 54,

L.

It would seem that the practice of omitting l in folk, was at least known, if not admitted, by Sidney, as he rhymes: folk cloak 28, folkes invokes 32,

О.

The following rhymes all point to the pronunciation of long and short o as (oo, o) and not as (oo, o): crossed engrossed 69, coast hoast 33, ones bones 42, one alone moane 4, mones ones 74, none bone 109, therefore adore 66, borne scorn 2, floore rore 96, abroad God 10, God load 67, upon stone 40,

folly holy 43, sory glory 42.

The following imply that o was also occasionally pronounced as (uu) or (u), though the three last rhymes were more probably imperfect: approve love 1, love move 12, moved behoved 20, love above grove remove 45, doe unto 119, begunn undunn doun 11, become dumb 38, sunn done 79, slumbered encom-bered 76, punished astonished 76, dost unjust 77, sprong tongue 8, wrong flong 45, flong song 60, strong dunge 83.

OT.

The rhymes here are insufficient to convey much information, yet perhaps they rather imply (oi) than (ui): annoid enjoy'd 81, destroi'd anoi'd 10.

00

This is used rather uncertainly, as (uu, u) and even as rhyming to (00): good blood 9, brood bloud 57, poore more 69, wordes boordes affordes 78, lord worde 50. The rhyme: budds goodes, is strongly indicative of the old pronunciation of u as (u) without any taint of the xvn th century (a).

OU, OW.

The following are quite regular as (ou): wound undrowned 68, wound bound found 105, power hower=hour 22, thou bowe 99, thou now 100.

In: thou two 129, yours towres 69, the older sound of (uu) seems to have prevailed, and in: mourn turn 69, us glorious 115, such touch much 35, we have the regular short (u), belonging to the same class.

In: could gold 21, would hold 27,

we have the same curious emancipation of ou from this category that was observed in Spenser, p. 872, col. 2, and is still occasionally met with, as I have heard it in use myself.

In: soule rowle=roll 26, soule extoll 103, we have apparently the regular action of l on long to produce (oou), but the following rhymes shew that even if the (u) had not been developed the rhyme would have been permissible: know so 72, unknown one 10, knowers aftergoers 85, alone unknown none forgone 44, flowes inclose 105, blows foes 3, showes goes 10, bestoe goe 100, throw show goe 18, woe goe show; woe row show 107, repose growes 62, woe growe 41, own one 16—and the rhyme: owner honor 8. 37, in connection with these, shews how indifferent the long and short sounds of o were to the ear of a rhymer.

8

In: this is 10, is his misse 11, is misse 115, blisse is 4, rased defaced 79, we have a confusion of (s) and (z), but in: presence essence 68, sacrifice cries 50, sacrifices sizes 66, the rhymes may have been pure. In: sent pacient 6, we have an indication of si-untransformed into (sh).

§ 6. Charles Butler's Phonetic Writing, and list of Words Like and Unlike, 1633-4.

The indistinctness with which Butler has explained, and the laxity with which he apparently denotes his vowels, have occasioned me considerable difficulty in attempting a transcription of his pho-But inasmuch as he has printed two books of fair netic writing. dimensions, his Grammar and his Feminine Monarchy, in his own character, so that he is the most voluminous phonetic writer with whom we have to deal, it was impossible to pass him over, and I have therefore endeavoured to transliterate a short passage from his Feminine Monarchy or History of Bees, 1634, which was printed in the ordinary as well as well the phonetic orthography. The vowel system is, so far as I can understand it, more truly of the xvi th century than even Dr. Gill's, and therefore this is the proper place for it, although it was published after the first third of the xvn th century. At the conclusion are annexed some extracts from his List of Words Like and Unlike, in his own orthography, using italics to represent his variants of old forms. In the following extract probably (i) should be read for (i), but the whole vowel system is too uncertain to insist upon such minute distinctions.

Extract from Butler's Feminine Monarchy, p. 2-4.

INDEX OF WOORDS LIKE AND VALIKE.

"Soom woords of lik' sound hav' different writing: as soon filius, sun sol: soom of lik' writing hav' different sound: as a mous mus, mous strues pl. of mou: soom of like sound and writing differ in de accent: as precédent pracedens, précedent exemplum quia pracedit: and soom of lik' sound, writing, and accent, differ yet in signification: wie den must be discerned by the sens of de woords precedent and

The object of the list which is thus introduced by the author seems to be to discriminate words of like sound as much as possible by various spellings, which in Butler's system would represent different but nearly identical sounds. The list therefore is not of much value or assistance, especially as the like and unlike words are not inserted separately. He seems to have trusted to an orthography which is extremely difficult to understand from his descrip-Hence instead of giving the whole list, 28 pages long, it will be sufficient to extract those parts in which some mention of pronunciation is made, and for these to adopt the author's own orthography, as in the above citation, because of the difficulty of interpreting it. The italic letters represent generally simple varieties of ordinary types, thus, oo, are joined together, forming one type, and so for es, and c, d, &c., have bars through them, t is 1, a turned t, These will occasion no difficulty. The final (') answers and so on. to mute s. It is the value of the simple vowels and digraphs and the effect of this mute (') as a lengthener, which it is so difficult to determine satisfactorily from Butler's indications. The small capitals indicate the usual orthography and generally replace Butler's black letters.

§ 7. Pronouncing Vocabulary of the Sixteenth Century, collected from Palsgrave 1530, Salesbury 1547, Cheke 1550, Smith 1568, Hart 1569, Bullokar 1580, Gill, 1621, and Butler 1633.

For ascertaining and comparing the different accounts of the pronunciation of the xvi th century which have come down to us, it is necessary to have an alphabetic list of all or most of the words which have been spelled phonetically by various writers, with a uniform transcription of their various notations. This is attempted in the present section. The following vocabulary contains:

- 1) all the English words cited by Palsgrave, p. 31, with the pronunciations as inferred from his descriptions.
- 2) all the English words cited by SALESBURY, pp. 32, 34, in his accounts of Welsh and English Pronunciation, with the pronunciation he has actually or inferentially assigned to them, as explained in the passages cited pp. 789-794.
 - 3) numerous words from Sir John Cheke's Translation of Matthew. 1
 - 4) all the words pronounced in Sir Thomas Smith's Treatise p. 34.
- 5) all the examples of diphthongs, and a few other words only from Harr, pp. 35, 794, whose pronunciation, as has been already frequently mentioned, was in several respects exceptional.
- 6) All the exemplificative words in Bullokar's lists, with many others collected from various parts of his Book at Large, pp. 36, 838.

1 The Gospel according to Saint Matthew and part of the first chapter of the Gospel according to Saint Mark translated from the Greek, with original notes, by Sir John Cheke, knight &c. Prefixed is an introductory account of the nature and object of the translation, by James Goodwin, B.D., London, Pickering, 1843, 8vo. pp. 124. Cheke

was born 16th June, 1614, and died "of shame and regret in consequence of his recantation, of Protestantism, 13th Sept., 1557. This translation, of which the autographic MS. is preserved (not quite perfect) at Corpus Christi College, Cambridge, is supposed by Mr. Goodwin to have been made about 7) all, or almost all words in GILL's Logonomia, pp. 38, 845; the provincialisms are not quite fully given, but GILL's whole account of them will be found below, Chap. XI, § 4, and they are best consulted in that connection.

8) A few characteristic words from Butler, pp. 39, 874.

The modern orthography has been followed in the arrangement of the vocabulary. Palsgrave and Salesbury occasionally give an old orthography different from that now in use, but the variation is not material. The others only give the phonetic spelling. Occasionally short observations from Smith and Gill have been added in the original Latin, and in some cases the Latin translation given by these authors is inserted. Some doubts may arise as to the propriety of retaining so many words about the pronunciation of which little hesitation can be felt by those who have mastered the main principles, such as, abandon, abhor, abound, absence, absent, &c. bill, bit, bless, boast, boat, &c., but after much consideration, it has been resolved to retain them, as no rule of exclusion could be framed, which did not seem to assume the very knowledge and familiarity which the vocabulary was meant to supply, and it is only by such accumulated proofs that the certainty of the results can impress itself on the reader's mind. These results are however extremely important in the history of our language, as they present the first sure ground after the time of Orrmin, and the only means by which we are able to rise to the pronunciation of Chaucer. Thus the certainty of the pronunciation of ou, ow as (uu) by Palsgrave and Bullokar, and the probability of their pronunciation of long i as (ii), are great helps towards conceiving the general use of these sounds in the xIV th century.

The various phonetic orthographies of the above writers (except Cheke's) have been translated into palaeotype to the best of my ability. although a few, unimportant, cases of doubt remain, generally pointed out by (?). The position of the accent is always hypothetical, except for the words cited from G. 128-138, in which Gill has generally marked or indicated the accent. It was at first intended to refer to Levins (p. 36,) for the position of the accent in each case, but his usage was found too uncertain to be made available. (w, J) at the beginning of combinations where some writers employ (u, i), and conversely the use of (u, i) at the end of combinations where some writers employ (w, J), has been consistently maintained. The difference between these writers and myself is purely theoretical: we mean to express the same sounds in each case. been interpreted as (kw) throughout, because this is believed to have been the sound intended. Bullokar uses the single letter q. The initial wr has been left, but (rw) has been subjoined with a (?) as this is believed to have been the sound. Except in the words spangle, entangle, where the sound (qg) is especially indicated, G 10, the introduction of (qg) for ng in the following vocabulary is quite hypothetical, for none of the writers cited seem to have thought the distinction between (q) and (qg) worth marking at all times.

There was a great difficulty in determining the length of the

vowels. Palsgrave does not note the length and Salesbury is not consistent in his notation. Smith, Hart, and Gill generally use diacritical signs, and Bullokar does so in many cases. Now when this is the case the discritical sign is often omitted by either the writer or printer, and it is difficult to know in any given case whether it ought to be added or not (p. 846, l. 3). The difficulty is increased when the diacritic implies a difference in quality as well as quantity, thus i, i are (ei, i) in Smith but (ii, i) in Gill, and i i are probably (ii, i) in Bullokar (p. 113). In these cases I have generally searched for other instances of the word, or been guided by the use of other writers, or by analogy. In Bullokar \dot{y} is not unfrequent, but iy, yi may be said never to occur, although he gives both as marks of the long sound, and i is most frequently used for both (ii) and (i) although i ought to have been used in the former By reference to pp. 110, 114, the reader will see the great difficulty which attaches to the value of long i in Palsgrave and Bullokar, and the reasons which have induced me, after repeated consideration for several years, to consider that it must have been (ii) or some closely cognate sound, acknowledging at the same time that this pronunciation was quite archaic at the time, just as obleege, oblesst (obliidzh:, obliist:) in Scotland and oblescht (obliitsht:) in English are still existent archaic forms, for which the greater number of English speakers say (obloidzh, obloidzhd). For the reason why Gill's j has been rendered (a) rather than (e) see p. 115, and the reason why his d, au, are each rendered by (AA) is given on p. 145, where we may add that Gill in adducing "HALL Henriculus, HALE trahere, et HALL aula," says: "exilior est a in duabus vocibus prioribus, in tertia fere est diphthongus," (G. 3,) so that he possibly hesitated between (au) and (AA). Hart's (yy) has been considered on p. 167, p. 796 note, col. 1, and p. 838.

Another source of error is the use of an old letter in a new sense. Thus Smith employs c for (tsh) and he consequently continually leaves c for (k, s) where his old habits misled him. Gill employed j for (3i), and the confusion between i, j in his book is very perplexing. Extremely slight distinctions in the forms of the letters are also confusing. Thus Smith distinguishes (i, e) as e, e, which have a diæresis mark superposed to imply length. The consequence is that it is sometimes extremely difficult to determine whether he means (ii) or (ee), and, considering that in his time the distinction of the sounds had not yet been thoroughly established by the orthographics es, ea, this confusion is perplexing and annoying.

For any errors and shortcomings of this kind, the indulgence of the reader is requested, and also for another inevitable source of error. The nature of the compilation, rendered it impossible to verify every word afterwards by referring to the passage from which it was quoted. I have therefore had to rely on the accuracy of my original transcript, and it is impossible that that should have been always correct.

Sir John Cheke's orthography is rather an attempt to improve the current spelling than strictly phonetic. Hence it has not been transliterated, but left as he wrote it, and is therefore printed in The following appear to have been the values of his symmetry bols, which were not always unambiguous: aa = (aa), ai = (ai, ee)ea = (ee?) unfrequent, ee = (ee) and = (ii), ei = (ai, ee?) ij = (ei, iii)ii?), o=(0) and (u), oa=(00?), oo=(00?) and (uu), oow=(00u), oo=(00u), oo=•1 vice for (i) and (1), but y was sometimes used as (1), although $\bar{\mathbf{r}}$ most frequently stands for (th) and (dh), for which also the occasion sionally occurs. The use of f is doubtful, sometimes it seems means for ij = (ei), sometimes as in dai it would seem only to indicate the diphthong, but it is used so irregularly that no weight can be tached to its appearance. The terminations -ty, -ble, occasional appear in the forms -tee, -bil. Final e, being useless when there a destinct means of representing long vowels, is generally, but no always omitted. The comparison of Cheke's orthography with the phonetic transcriptions of others seems to bring out these points.

The authority for each pronunciation is subjoined in chronology order, but not the reference to the passage, except in the cases of Gill and Cheke. The figures refer to the page of the second edit of Gill's Logonomia (supra p. 38) and the chapters of Sir Jook Cheke's translation of Matthew. The references to Salesbury be found in the index, supra pp. 789-724. Smith and Bullok words can generally be easily found in their books, from the systematic lists. The example from Bullokar p. 839, and Heart, p. 798, are also sufficient guarantees of the correctness of the transcription. The authors' names are contracted, and a sorreviations are used as follows. All words not in palaeoty pe,

with exception of the authors' names, are in Italics.

EXTRACTS FROM RICHARD MULCASTER'S ELEMENTARIE, 1582.

Gill says in the preface to his Logonomia, "Occurrere quidem huic vitio [cacographiæ] viri boni et literati, sed irrito conatu; ex equestri ordine Thomas Smithius; cui volumen bene magnum opposuit Rich. Mulcasterus: qui post magnam temporis et bonæ chartæ perditionem, omnia Consuctudini tanquam tyranno permittenda censet." Mulcaster's object in short was to teach, not the spelling of sounds, but what he considered the neatest style of spelling as derived from custom, in order to avoid the great confusion which then prevailed. He succeeded to the extent of largely influencing subsequent authorities. In Ben Jonson's Grammar, the Chapters on orthography are little more than abridgements of Mulcaster's. Sometimes the same examples are used, and the very faults of description are followed. It would have been difficult to make

anything out of Mulcaster without the help of contemporary orthoepists, and it appeared useless to quote him as an authority in Chap. III. But an account of the xvith century pronunciation would be incomplete without some notice of his book, and the value of his remarks has been insisted on by Messrs. Noyes and Peirce (infra p. 917, note). A few extracts are therefore given, with bracketted remarks. Chronologically, Mulcaster's book should have been noticed before Gill's, p. 845. But as he was a pure orthographer who only incidentally and obscurely noticed orthocpy, these extracts rightly form a postscript to the preceding vocabulary. The title of the book, which will be found in the Grenville collection at the British Museum, is:—

The first part of the elementarie which entreateth chefelie of the right writing of our English tung, set furth by RICHARD MVLCASTER. Imprinted at London by Thomas Vautroullier dwelling in the blak-friers by Lud-gate, 1582.

In Herbert's Ames, 2, 1073, it is said that no other part was ever published. In the following account, all is Mulcaster's except the passages inclosed in brackets, and the headings. The numbers at the end of each quotation refer to the page of Mulcaster's book.

The Vowels Generally.

The vowells generallie sound either Long as, comparing, revenged, enditing, Desclosure, presuming: or short as, ran-Taking, reuëlling, penitent, omnipotent, ortunat: [here the example revenged, which had certainly a short vowel, hews that by length and brevity, Mulcaster meant presence and absence of stress, which applies to every case;] ither sharp, as mate, méte, ripe, hôpe, dike. or flat as: mat, met, rip, hop, ➡ak. [Here he only means long or whort, and does not necessarily, or in-leed always, imply a difference of quality, as will appear under E. Oc-asionally, however, he certainly does denote a difference of quality by these ccents, as will be seen under O. In his "general table" of spelling, these entiate words, which only differed in their consonants, and it is impossible from his use of them to determine the sounds he perhaps meant to express. Thus in his chapter on Distinction, he says: "That the sharp and flat accents ar onelie to be set vpon the last syllab, where the sharp bath manie causes to present it self: the flat onlie vpon som rare difference, as refuse, refuse, present, present, record, record, differ, differ, seuer, seuere." 151.-Where the grave accent seems to mark absence of stress, the quality of the vowel changing or not.] Which diversitie in sound, where occasion doth require it, is noted with the distinctions of time [meaning stress in reality, which he indicates by , because in English versification imitating the classical, quantity was replaced by stress], and tune [meaning length, which he indicates by accent marks, and hence confuses with tune], the generallie it nede not, considering our daielie custom, which is both our best, and our commonest gide in such cases, is our ordinarie leader [and hence unfortunately he says as little as possible about it] .-- 110.

Proportion.

I call that proportion, when a number of words of like sound ar writen with like letters, or if the like sound have not the like letters, the cause why is shewed, as in hear, fran, dear, gear, wear [where the last word, which was certainly (weer), should determine the value of ea in the others to have been (ee) in Mulcaster's pronunciation, though, as others said (Hiir, fiir, dir) even in his day, this may be too hasty a conclusion].—124.

A.

A Besides this generall note for the time and tune, hath no particular thing worth the observation in this place, as a letter, but it hath afterward in proportion, as a syllab. All the other vowells have manie pretie notes. [This might mean that a always preserved its sound, and the other vowels did not. It is possible that the "pretie notes" only refer to his observations on them, and not to diversity of sound.]—111.

Acks, bracks, with the qualifying e, for without the e, t, goeth before ch. as patch, snatch, catch, snatch, watch. The strong ch. is mere foren, and therefor endeth no word with vs, but is turned into k, as stomak, monark. [This context makes a long and ch = (tsh) in acke = (aatsh). Yet in his general table p. 170, he spells both acks and ake. See the illustrations of acks in Shakspere, infrà § 8.]—127.

AI, EI.

Ai, is the mans dipthong, and soundeth full: ei, the womans, and soundeth finish [=rather fine] in the same both sense, and vse; a woman is deintie, and feinteth soon, the man fainteth not bycause he is nothing daintie. [Whether any really phonetic difference was meant, and if so of what kind, is problematical. Smith had said the same thing, supra p. 120, but with Smith the word diphthong had a phonetic meaning, with Mulcaster it was simply a digraph, and he may have at most alluded to such differences as (ex. ee) or (ee, ee). Compare the following paragraph.]—119.

No English word endeth in a, but in sie, as decaie, assaie, which writing and sound our vso hath won. [Does this confuse or distinguish the sounds of a, ai? It might do both. It ought to distinguish, because the writing of as being different from the writing of a, the mention of its sound should imply that that sound was also different. But we cannot tell. See what follows.]—125.

Gaie, graie, traie. And maid, said, quaif, English for coif, quail, sail, rail, mail, onclesse it were better to write these with the qualifying, e, quale, fale, rale, male. [If any phonetic consistency were predicable of an orthographical reformer.—which, however, we are not justified in assuming,—this ought to in-

dicate a similarity of pronounbetween ai and a. To the sam clusion tend: Howbeit both tl minations be in vse to diverse Gain, pain, if not, Pane, gane, r and such as these terminations, l vsed to diverse ends, [these "ends" being of course not to in diversity of sound, but divers sense; it would be quite enou Mulcaster to feel that the vow long, and that a final e, and not serted i, was the "proper" warking length.] ... Fair, pair, not Fare, pare, are, both termin also be vsed to diverse ends. strait, if not Wate, strate. Stra streight, bycause at and et, do change vses. Aim, or ame, Paint, restraint, faint, or feint, or queint . . . Ete, eight, sleight, weight, feild, yould, sheild, the between ei, and ei, maketh eanie where so ordinarie, as in terminations. [If we were siderate enough to suppose that caster had any thought of repres the different sounds, as disting from the length, of vowels, all cases, would be explicable by ass ai = si = (ee), and a long =
But this would be somewhat o
to other parts of Mulcaster,
the writings of contemporaries, founded upon the groundless assu just mentioned. As to the sin of ai, a, see suprà p. 867, col. Mr. White's account of Eliza pronunciation, infrà.]-136-7.

E.

Whensoeuer E, is the last lett soundeth, it soundeth sharp, as wé. agré. sauing in the, the arti the pronown, and in Latin words a Latin form, when there be vsec lish like, as certiorare, quandare, e, soundeth full and brode aft originall Latin. [Here, as we that the sounds were (mii, si agrii, dhe), though (se) is not : tain from other sources, we migh pose é = (ii), è = (e). Ben J however, in abstracting and ad this passage, distinctly makes the (ii), saying (Gram. chap. iii.), " it is the last letter, and sounde sound is sharp, as in the French ample in mé. sé. agré. yé. shé. saving the article thè." Observ yé is now (Jii) and not (Je). O

also that quandary is referred to a Latin origin, quam dare, as if they were the first words of a writ.] Whensoeuer e, is the last, and soundeth not, it either qualifieth som letter going before, or it is mere silent, and yet in neither kinde encreaseth it the number of syllabs. I call that E, qualifying, whose absence or presence, somtime altereth the vowell, somtime the consonant going next before it. It altereth the sound [length] of all the vowells, even quite thorough one or mo consonants, as made, stême, éche, kinde, stripe, óre, cure, tôste sound sharp with the qualifying E in their end: wheras, mad, stem, ech, frind, strip, or cur, tost, contract of tossed, sound flat without the same E. [Now as we know that steam, each, were (steem, each), it follows that & represented either (ii) or (ee), that is, that the scute accent only represented length, independently of alteration in quality of tone; there was such an alteration in sure, cur, certainly, and in stripe, strip, according to the current pronunciation; but there was or was not in se, steme, compared with stem, and hence we have no reason to infer that there was any in máde, màd, óre, òr. Ben Jonson alters the passage thus : "Where it [E] endeth, and soundeth obscure, and faintly, it serves as an accent, to produce the Vowell preceding: as in made. stéme. stripe. ore. cure. which else would sound, màd. stèm. strìp. òr. cùr." It is tolerably clear that by using "produce" in place of Mulcaster's "alter the sound," he intended to avoid the difficulty of considering stems = steam as (stiim), unless, indeed, he meant it to be a contraction for esteem. He omits the example each for a simi-

lar reason.]—111.

Pert, desert, the most of these sorts be bissyllabs or aboue: besides that, a, dealeth verie much before the r, [meaning probably that er was often sounded (ar)]. By descrue, preserve, conserve, it should appear that either we strain the Latin s to our sound, or that their had som sound of the z, expressed by s, as well as we, [did he say (konzerv')?] —132.

Ι.

I, in the same proportion [suprà p. 911] soundeth now sharp, as give, thriue, aliue, vviue, title, bible, now quik, as giue, liue, elue, title, bible, which sounds ar to be distinguished by accent, if acquaintance will not seme in much reading. [As Ben Jonson uses the same words and notation, and we know that he must have distinguished his i, i, as (oi, i) there is no reason for supposing that Mulcaster's i was anything but (ei) or (ei). But at the same time there is nothing to militate against the contemporary Bullokar's (ii). And Mulcaster's pronunciation of ou as (uu), infrà p. 914, which is about the only certain result that can be elicited from his book, renders the (ii) probable.]-115.

I, besides the time and tune thereof noted before, hath a form somtime vowellish, somtime consonantish. the vowellish sound either it endeth a former syllab or the verie last. When it endeth the last, and is it self the last letter, if it sound gentlie, it is qualified by the e, as manie, merie, tarie, carie, where the verie pen, will rather end in e, than in the naked i. If it sound sharp and loud, it is to be written y, having no, e, after it, as neding no qualification, deny, cry, defy. [This at any rate goes against Gill's use of final (ei), supra p. 281, which, however, he only attributes to "numerus poeticus," Log. p. 130, in his Chap. 25, quoted at

length, infra § 8.]—113.

If it [I] end the last syllab, with one or mo consonants after it, it is shrill [long] when the qualifying e, followeth, and if it be shrill [long] the qualifying e, must follow, as, repine, vnuise, minde, kinde, fiste [foist?]. If it be flat and quik, the qualifying e, must not follow, as, examin, behind, mist, fist. [Observe (beнind) with a short vowel, and hence certainly not

(beneind').]—114.

The quik i, and the gentle passant e, ar so near of kin, as theie enterchange places with pardon, as in descryed, or descryid, findeth, or findith, hir, or her, the error is no heresie.—115.

If it [I] light somwhat quiklie vpon the s, then the s is single, as promis tretis, amis, aduertis, enfranchis, etc. This seems to establish (advertis, enfranchis) as the common pronunciation.]-133.

O.

O is a letter of as great vnccrtaintie in our tung, as e, is of direction both alone in vowell, and combined in diphthong. The cause is, for that in vowell it soundeth as much vpon the u, which is his cosin, as upon the 6, which is his naturall, as in cosen, dosen, mother, which o, is still naturallie short, and, hósen, frósen, móther, which o, is na-turallie long. In the diphthong it soundeth more vpon the, u, then vpon the, o, as in found, wound, cow, sow, bow, how, now, and bow, sow, wrought, ought, mow, trough. Notwithstanding this varietie, yet our custom is so acquainted with the vse thereof, as it wilbe more difficultie to alter a known confusion, then profitable to bring in an vnknown reformation, in such an argument, where acquaintance makes iustice, and vse doth no man wrong. And yet where difference by note shall seem to be necessarie the titles of proportion and distinction will not omit the help. In the mean time thus much is to be noted of o: besides his time long and short, besides his tune with or without the qualifying e, sharp or flat, that when it is the last letter in the word, it soundeth sharp and loud, as agó, tó, só, nó. saue in to the preposition, two the numerall, do the verb : his compounds as. vndò, his derivatives as dòing. In the midle syllabs, for tune, it is sharp, as here, or flat if a consonant end the syllab after o. For time the polysyllab will bewraie it self in our dailie pronouncing: considering tho children and learners be ignorant, yet he is a verie simple teacher, that knoweth not the tuning of our ordinarie words, yea tho theie be enfranchised, as ignorant, impudent, impotent. O varieth the sound in the same proportion, naie oftimes in the same letters, as loue, gloue, doue, shoue, remoue, and loue gróue, shróue, nóue. This duble sound of o, in the vowell is Latinish, where o, and u, be great cosens, as in voltus, voltis, colo. And vultus, vultis, occulo: in the diphthong it is Grekish, for theie sound their ov, still vpon the u, tho it be contract of oo, or oe [there is some misprint in these oo, oe which is imitated here], wherein as their president [precedent] is our warrant against obiection in these, so must acquaintance be the mean to discern the duble force of this letter, where we finde it, and he that will learn our tung, must learn the writing of it to, being no more strange then other tungs be euen in the writing. [It would seem by the general tenor of these remarks, that the two sounds of o were (oo, u), and even that the diphthong ou, in those words it is said to "sound more upon, it then vpon the, o," had, as with I kar and Palsgrave, the sound of It is in fact difficult to conceive Mulcaster pronounced otherwise. this sounding of ou as (uu), leabefore mentioned, p, 913, to the picion of sounding i long as (ii).]—

O, in the end is said to sound as go, shro [shrew?], fro, sauing two, etc. . . . O before, l, sounding a dipthong causeth the Il, be dul as troll. And if a consonant foll o, commonlie hath the same force the l, be but single, told, cold, colt, dolt, colf, rolf, holt, holm, dissolue. [The last example is liar.] O, before m, in the begin or midle of a word, leading the labs soundeth flat vpon the o, a nipotent, commend, but in the e soundeth still vpon, the u, as som dom, [hence the first is (o), the s (u)] and therfor in their derius and compounds as welcom, true newcom, cumbersom, kingdom. W after the m, as home, mome, [roam?], and yet whom, from no, e, by prerogative of vse, tho have it in sound and seming [t are called (Hoom froom), whi strange, especially as regards from Or is a termination of som truble, a consonant followeth, bycause it s eth so much vpon the u, as worm, [(furm)?] sword, word, and your qualifying e, after wil bewraie at the absence thereof will bewraie storme, o, worm, u, lorde o, hord

Good, stood, yood. Hoof, roof. took, book, hook. School, tool. 6 bloom. Hoop, coop. If custon not won this, why not où? Byet the sound which these diphthong somtimes ypon the o, sometimes the, u. I will note the o, sounding himself, with the streight accencause that o, leadeth the lesse nu Bow, know, sow, and Bow, sow move. [That is (buu, suu, kuu, but there seem to be some mispri what follows, compare the wrought, move, trough, given a Outch, croutch, slowtch. Lowde, thouf, alouf. Gouge, bouge. tought, owight, oright, owight, again, B mought, sought, length, rough, sought,

mough. Houl, coul, skoul. Why not as well as with oo? Roum, broum, loum. Noun, croun, cloun, doun. Own, grown, vpon the derivative. Stoup, loup, droup, coup. Sound, ground, found. Our commonlie abrevationlike as our, the termination for enfranchisments, as autour, procuratour, as, er is for our our, as suter, writer : Bour, lour, flour, four, alone vpon the, o. Mourn, adiourn. Howse, lowse, mowse, the verbes and derivatives vpon the, z, as House, louse, mouse, the nouns vpon the, s, Ous, our English cadence for Latin words in osus, as notorious, famous, populous, riotous, gorgeous, being as it were the vniting of the chefe letters in the two syllabs, o, and u, osus. Clout, lout, dout. [These instances are strong-ly confirmative of the close ou having been (uu) to Mulcaster, and his only knowing the open ou or (oou).]-136.

OI.

Thirdlie, oi, the diphthong sounding vpon the o, for difference sake, from the other, which soundeth vpon the u, wold be written with a y, as ioy, anoy, toy, boy, whereas anoint, appoint, foil, and such seme to have an u. And yet when, i, goeth before the diphthong, tho it sound upon the u, it were better oy then oi, as ioynt, ioyn, which their shall soon perceiue, when their mark the spede of their pen: likewise if oi with i, sound upon the o, it maie be noted for difference from the other sound, with the streight accent, as boic, entoic.—117-8.

U.

V besides the notes of his form, besides his time and tune, is to be noted also not to end anie English word, which if it did it should sound sharp, as nú, trú, vertú. But to auoid the nakednesse of the small u, in the end we vse to write those terminations with ew the diphthong, as new, trew, vertew. [Whether this implies that u was called (iu), or that ew was called (yy) occasionally, as in Smith and Palsgrave, it is hard to say.]—116.

-URE.

I call that a bissyllab, wherein there be two seuerall sounding vowells, as Asur, rasur, masur, and why not lasur? Are these words azure, rasure, measure, leisure? If so the orthography, or the confusion of a, ea, ei, into one sound, is very remarkable. Further on he writes:] Natur, statur, Measur, treasur. [Probably this settles the question of measure; but the spelling would indicate that the final -ture, -sure, were (-tur, -sur,) which would have immediately generated the xvII th century (-tər, -sər), and not Gill's (-tyyr, -syyr). Probably both were in use at that time.]-137. This shortnesse or length of time in the derivatives is a great leader, where to write or not to write the qualifying, e, in the end of simple words. For who will write, natur, perfit, measur, treasur, with an, e, in the end knowing their derivatives to be short, naturall, perfitlie, measured, treasurer?.... And again, fortun profit, comfort, must haue no, e, bycause fortunate, profiting, comforter haue the last saue one short. [It will be seen in Chapter IX. § 2, in Hodges's list of like and unlike words, after the vocabulary, that the pronunciation (-ter) or (-tər) prevailed at least as early as 1643. See also the remarks in Mr. White's Elizabethan Pronunciation, infrà. The examples fortun, fortunate, point to the early origin of the modern vulgarism (faat n, faat n:t.)]-

REMARKS FROM AN ANONYMOUS BLACK-LETTER BOOK, PROBABLY OF THE XVI TH CENTURY.

As these pages were passing through the press, I met with an 8vo. black-letter book, without date or place, the date of which is supposed to be 1602 in the British Museum Catalogue, press-mark 828, f. 7, entitled:

"Certaine grammar questions for the exercise of young Schollers in the learning of the Accidence."

In the enumeration of the diphthongs, occur the following remarks which clearly point out sa as (ee), and distinguish i short and i long as having characteristically different sounds, probably (i ei) or (ei):—

"ea for e full great se or is for i smal greefe guyde." ui for i broade

The following curious passage shews that si- was by error occasionally pronounced (sh) in reading Latin words, and hence had most probably the same unrecognized English sound at the close of the xvi th century. It is unfortunate that the book is of unknown date, and that there is nothing which suggests the date with certainty. The type and spelling have the appearance of the xvi th century, and there is a written note "happening byforhond," appended to Accidents on the last page of sig. B, which is apparently of that date, but there are other words on the next page in a much later hand. The information then must be taken for what it is worth, but it seems to be of Shakspere's time, and is important as the oldest notice of such a usage.

"Q. Nowe what thinges doe yee obscrue in reading:

 R. In right observation of the markes and prickes before mencioned."

Here the *lotacismus* may be considered to reprobate the pronunciation of Latin i as (ei). The Lambdacismus alludes to the introduction of (u) before (l). For both errors, see supra p. 744, note 1. The ischnotes (suprà p. 90, n. 1) of feather for father, either means the actual use of the sound (feedh er) for (faadh er), in which case this would be the earliest notice of the pronunciation of a long as (ee), but still as a reprobated vulgarism, antedating its recognition by nearly a century,—or else it means merely thinning a from (aa) to (ex), which was no doubt sporadically existent at this early period. The enigmatical fedder of Salesbury may, as we have seen, also refer to father (supra p. 750, n. 8), and both may indicate an

anomalous pronunciation confined to that single word. The abusing of letters reminds one of Hart, supra p. 794, note 1. It is observable that the use of (z) for (s), in musa, is reprobated, although probably universal, as at present, and is placed in the same category with (v) for (f), a mere provincialism, and (sh) for ci-, which we here meet with for the first time, and notably in terms of reprobation, and after the distinct mention of the "right pronouncing of ti" as "of vs commonly sounded ci," meaning (si) "when any vowel doth follow next after him or els not." As late as 1673, E. Coote writes in his English Schoolmaster, p. 31: "Rob. How many ways can you express this sound si? Joh. Only three; si, ci, and soi or xi, which is csi. Rob. Now have you erred as well as I; for ti before a vowel doth commonly sound si." So that (sh) was not even then acknowledged. It is curious that there is no reference to the use of (th) for t and d final, see supra, p. 844, under D and T.

§ 8. On the Pronunciation of Shakspere.

Our sources of information respecting the pronunciation of Shakspere are twofold, external and internal. The external comprises those writers which have been examined in Chap. III., and illustrated in the preceding sections of the present chapter. Of these,

¹ The first published attempt to gather the pronunciation of Shakspere from the writings of preceding orthoepists is, so far as I know, an article in the "North American Review" for April, 1864, pp. 842-369, jointly written by Messrs. John B. Noyes and Charles S. Peirce. Unfortunately these gentlemen were not acquainted with Salesbury, whose works are the key to all the others. Had they known this orthoepist, the researches in my third and eighth chapters might have been unne-cessary. Salesbury's Welsh Dictionary first fell under my notice on 14 Feb. 1859; his account of Welsh pronunciation was apparently not then in the British Museum, and seems not to have been acquired till some years afterwards, during which time I vainly sought a copy, as it was necessary to establish the value of his Welsh transcriptions. I had finished my first examination of Salesbury, Smith, Hart, Bullokar, Gill, Butler, Wallis, Wilkins, Price, Miege, Jones, Buchanan, and Franklin, and sent the results for publication in the Appendix to the 3rd edition of my Plea (suprà p. 631, note) in 1860, but the printing of that work having been in-terrupted by the outbreak of the Civil War in America, they have not yet appeared. My attention was directed

to Messrs. Noyes and Peirce's article in March, 1865, and I noted all the works they quoted, some of which I have unfortunately not been able to see; and others, especially R. Mulcaster's Elementarie, 1582 (suprà p. 910), and Edward Coote's Schoole-Master, 1624 (suprà p. 47, l. 19), which Mr. Noyes considers as only inferior to Gill and Wallis, I have scarcely found of any value. When I re-commenced my investigations at the close of 1866, since which time I have been engaged upon them with scarcely any intermission, I determined to conduct them independently of Messrs. Noyes and Peirce's labours, with the intention to compare our results. It will be found that we do not much differ, and the points of difference seem to be chiefly due to the larger field here covered (those gentlemen almost confined themselves to Elizabethan times), and perhaps to my long previous phonetic training. The following are the old writers cited by Messrs. Noyes and T. Smith, Bullokar, "Æsops Fables in true Ortography, with Grammar Nots, 8vo., 1586" (which I have not seen), P. Bales, 1590 (not seen). Gill, Butler, B. Jonson, Wallis, Baret, Gataker, Coote, Percival's Spanish Grammar, however, Palsgrave, Salesbury, Smith, and Hart, wrote before Shakspere's birth or when he was a baby (see table p. 50), and although Bullokar published his book when Shakspere was sixteen. it represents a much more archaic form of language than Hart's, of which the first draft (suprà p. 794, note) was written six years before Shakspere's birth. Gill, who was born the same year as Shakspere, should naturally be the best authority for the pronunciation of the time. He was head master of St. Paul's School during the last eight years of Shakspere's life, and he published the first edition of his book only three years after Shakspere's death. But Gill was a favourer of old habits. We have on record his contempt of the modern thinness of utterance then affected by the ladies (pp. 90, 91) and his objections to Hart's propensities in that direction (p. 122). Gill was a Lincolnshire man, of East Midland habits. Shakspere was a Staffordshire man, more inclined to West Midland. Hence, although Gill no doubt represented a recognized pronunciation, which would have been allowed on the stage, it is possible that Shakspere's individual habits may have tended in the direction which Gill reprobated. The pronunciation of the stage itself in the time of the Kembles used to be archaic, and our tragedians (or such of them as remain) still seem to affect similar habits. But it is possible that in Shakspere's time a different custom prevailed, and that dramatic authors and actors rather affected the newest habits of the court. Hence the necessity for proving the indications of Gill and other writers by an examination of Shakspere's own usage, so far as it can be determined from the very unsatisfactory condition in which his text has come down to us.

The internal sources of information are three in number, puns, metre, and rhyme. The first is peculiar and seems to offer many advantages in determining identity of sound, accompanied by diversity of spelling, but is not really of so much use as might have been expected. The metre, properly examined, determines the number of syllables in a word and the place of the accent, and, so far as it goes, is the most trustworthy source of information which we possess. The rhyme, after our experience of Spenser's habits, must be of very doubtful assistance. At most we can compare general habits of rhyming with the general rules laid down by contemporary orthoepists. A few inferences may be drawn from peculiarities of

1623 (not seen), Cotgrave, Nat Strong (not seen), Wilkins, Mulcaster, Festeau, 1673 (not seen), Berault, 1698 (not seen), De la Touche, 1710 (not seen), Taudon, 1745 (not seen), Sharp on English Pronunciation, 1767, and the following, which I have not examined, Nares, 1784, Hexham 1660, Pomey, 1690, Saxon 1737. Messrs. Noyes and Peirce's conclusions will be inserted as footnotes to the subsection headed "Conjectured Pronunciation of Shakspere," immediately before the speci-

men at the end of this chapter.

An elaborate attempt to determine the pronunciation of some vowels and consonants by means of rhymes, puns, and misspellings, was made by Mr. Richard Grant White in his edition of Shakspere, vol. 12, ed. 1861. This did not come under my notice till these pages were passing through the press. An abstract of his researches, with remarks, will be found below, immediately after the present examination of Shakspere's rhymes.

spelling, but when we recollect that Shakspere did not revise the text, and, if he had done so, might not have been very careful in correcting literals, or have had any peculiar notions of orthography to enforce, we cannot lay much store by this. Nevertheless I have thought it right to read through the whole of Shakspere with a view to his puns and rhymes, and, during the latter part of this task, I also noted many metrical and accentual peculiarities. results obtained will have more or less interest to Shaksperean students, independently of their phonetic bearing.

The following system of reference has been adopted in which I have had in view the owners of any modern edition, and have more especially consulted the convenience of those who possess Macmillan's Globe edition, of which the text is the same as that of the Cambridge Shakspere, edited by Messrs. W. G. Clark and W.

In case of the plays the first figure following the title represents the act, the second the scene, and the third the number of the speech. The speeches are generally not numbered. The speeches in each scene were, I believe, first numbered by me in phonetic editions of T and M in 1849, and Mr. Craik, in his edition of JC, numbered the speeches from beginning to end of the play, thinking that he was the first person who had done so. There may be some doubt in some plays, as AC, regarding the number of the scenes, and in a few scenes as to the number of speeches, but those who have been in the habit of using Mrs. Cowden Clarke's Concordance to Shakspere, where the reference is to act and scene only, will readily acknowledge the great convenience of having only to count the speeches to find the passage with tolerable certainty, instead of having to read through a whole long scene. It would be a great boon if subsequent publishers of Shakspere would adopt this plan of numbering the speeches, which would give a means of reference independent of the size of the page, and serving for the prose portions as well as for the verses. In the specimens at the close of this section the speeches are numbered in the way proposed, the current number being prefixed to the name of the speaker. Finding, however, that this reference is not always minute or convenient enough, I have inserted two other numbers in a parenthesis, the first referring to the page (number unaccented denoting the first, and number accented the second column) in the Globe edition, and the second pointing out the line of the previously indicated scene in When the scene consists wholly of verse, this numthat edition. ber coincides with that of the line in the Cambridge edition, but when any prose has preceded, as the number of words in a line in the Globe edition is less than that in the Cambridge edition, the number of the line in the former is somewhat greater than that in the latter. Thus

gilt guilt 2 H4 4, 5, 31 (432, 129)

shews that the pun, gilt guilt, is found in the second part of Henry IV, act 4, scene 5, speech 31; Globe edition, page 432, column 2, verse 129 of this fifth scene. The reference is always to the first line and first speech in which the several words which form the pun and rhyme occur. Consequently the reader will have to refer to some following lines, and even speeches, occasionally, to find the full pun or rhyme. The order of the words in the rhyme as cited is generally, but not always, that in which they occur in the original, and hence the reference must be considered as belonging to either word.

The Sonnets are referred to by the number of the sonnet and verse, with the page or column in the Globe edition, so that

prove love S 117, 13 (1045')

shews that the rhyme prove love, occurs in sonnet 117, verse 13; Globe edition, page 1045, column 2.

For the other poems, VA, RL, LC, and PT, the annexed numbers give the verses and column in the Globe edition. PP gives the number of the poem and verse of the poem as in the Cambridge edition, and the column and verse in the Globe edition.

That it was not used in Shakspere, where he had so much need of it, seems evidence against any ancient derivation, and to reduce it to the chance associations of comparatively modern slang. There is little use in looking for old roots unless the word itself is known to be old.

In addition to the citations there made, Mr. Edward Viles has kindly furnished me with the following :-"There was a Lady in Spaine, who after the decease of hir Father hadde three sutors, (and yet neuer a good Archer.)" Lyly's Euphues and his England, p. 293, Arber's reprint. This is from the book on which LL is, so to speak, founded, and hence establishes the existence of the joke in Shakspere's time. We shall, however, have occasion to see that the resolution of (si) into (sh) was not the received, or polite custom of that period, although it was known and reprobated (suprà p. 915): In the same way a modern joke might be made from picked her picture, which Cooper, 1685, gives as absolutely identical in sound, although (pik tr) is now a pure vulgarism.

bate beat TS 4, 1, 67 (245, 209). There is no doubt of the pronunciation of ea = (ee), and this passage would be unintelligible unless the sound of long a were quite distinct, the play being simply on the consonants. The words are: "as we watch these kites That bate and beat and will not be obedient." We may therefore feel sure that long a was not = (ee). Such allusions are like the heraldic motto dum spiro spero.

gravity gravy 2 H4 1, 2, 55 (413, 183). "Chief Justice. There is not a white hair on your head, but should have his effect of gravity.-Falstaff. His effect of gravy, gravy, gravy."
The mocking joke is entirely lost in the modern (græv iti, gree vi). The old pronunciation must have had the same vowel in each case, (graviti, graavi). This instance and the last therefore determine that Shakspere's long a could not have been (ee), and must have been the same as his short

Hence it does not countenance the supposition that the sound of French u was impossible to an Englishman. Pucelle is spelled Puzel throughout in the fo. 1623.

"Then, if your husband have stables enough, you'll see he shall lack no barns." Bairns is only a modern barns." Bairns is only a modern orthography. In AW1, 3, 10 (257, 28) the first folio reads barnes, the second bearns, probably only a trans-position of the e, and the two last barns. This therefore gives no information respecting ai.

tale tail TG 2, 3, 9 (26', 54). Oth 3, 1, 6 (892, 8). In the first case the joke is so obscure when no difference is made between the sounds of tail, tale, that Hanmer illustrates it with a kick. In the second the first folio reads tale in both places, and tail is meant probably in both cases. Under no circumstances can we suppose tale, tail to have had the same sound till the xviii th century. See however the quotation from Holyband, suprà p. 227, note, col. 2, which seems to indicate an occasional confusion of ai, a, and also Spenser's rhymes,

beats baits WT 1, 2, 32 (312', 91). Leontes speaking of Paulina calls her, "A callat Of boundless tongue, who late hath beat her husband And now baits me!" Here it is absolutely essential to the cutting sarcasm that beat, bait should have been differently pronounced. It would make nonsense to say (beet, beets). The modern (biit, beets) preserves the full force of the original. See remarks on bate beat p. 923, c. 1. fair fear VA 1083 (1013). "Having no

Which I will win from France, or else be slain."

The pronunciation was probably (meen) in each case. But it is possible that the English pronunciation of the state of Maine was still (Main). Gill pronounces the rhyming word slain (slain).

These are the only puns which I have discovered, though I looked carefully for them, in which ai could have the sound of (ee). The three words thus determined are main, heir, raisins. We have no contemporary orthoepical account of these words; but Gill uses (main) in composition, and Cheke spells heiers. Considering how widely the (ee) pronunciation had spread so early as Hart's time, and that Gill acknowledged though scouted its existence, the number of instances is remarkably small, while the first of the preceding examples, beat, bait, seems to establish an accepted difference of sound, between ai, ea, the last of which was undoubtedly (ee).

But the existence of the pun shews that the old Chaucerian (oo) of (Roo'me) was still known, though the final (e) was dropped. See next entry.

Rome room KJ 3, 1, 27 (341', 180). JC 1, 2, 38 (766, 156). Both these al-lusions are in passionate stately verse. They are generally assumed to determine the sound of Rome as (Ruum). See suprà p. 98, last line, p. 101, line 1, p. 102, line 23. Dyce (ib.) quotes the same pun from Hawkins 1626, and from the tragedy of Nero 1607, and the rhyme tomb, Rome from Sylvester 1641. To these we may add Shakspere's own rhymes: Rome doom RL 715 (1021). Rome groom RL 1644 (1029). Bullokar also writes (Ruu'm). It is however certain that both pronunciations have been in use since the middle of the xvith century. (Ruum) may still be heard, but it is antiquated; in Shakspere's time it was a fineness and an innovation, and it is therefore surprising that Bullokar adopted it.

Ba, pueritia, with a horn added .- Moth. Ba, most silly sheep with a horn. You hear his learning. - Hol. Quis, quis, thou consonant? - Moth. The third of the five vowels, if you repeat them; or the fifth, if I.—Hol. I will repeat them,—a, e, i.—Moth. The sheep: the other two concludes it,—o, u." Here the name of the vowel i is identified with the pronoun I, which presents no difficulty, and the name of the vowel u with the pronoun you, and perhaps the sheep evec, houn you, and perhaps the sneep sec, the first of which is opposed to the pronunciation (yy), which all writers down to Wallis give to the French vowel, except Holyband, supra p. 228, note, col. 2, 1. 14. The pun is quite reconcilable with our modern propulation of the state way. pronunciation of u, you, ewe, but see the last two words in the vocabulary pp. 889, 910. It would perhaps be unwise to push this boy's joke too far. Moth's wit, which did not scruple about adding on a consonant to convert wittel into wit-old in his next speech, might have been abundantly satisfied with calling the vowel (Jyy). See, however, the rhymes on long u, ue, ew, iew, and you; and the observations on Shakspere's pronunciation of long u, in the introduction to the specimen at the end of this section.

This examination of puns has not resulted in any real addition to our knowledge. It has confirmed the value of long a=(an) or almost (aah) and quite distinct from (ee). It has rendered rather

doubtful the exact pronunciation of ai, making it probably the same as (ee) in three words, generally different from (ee), and occasionally approximating to (aa). It confirms the use of ea, oa, and of $\bar{o}l$ as (ooul). In the case of mud, it implies the general pronunciation of short u as (u). It confirms the identity of sound in I, eye, aye. It shews that long i and the pronoun I were identical, and that long u and the pronoun you were either identical or closely related. It is evident that without the external help we should have been little advanced.

SHAKSPERE'S METRICAL PECULIARITIES.

My collections have not been made with sufficient care to give a full account of Shakspere's metres, which would have also required more space than could be given to it in a work already overswollen. My attention has been chiefly directed to three points, and that only from the beginning of the Histories. These are, the number of measures in a line, the number of syllables in a measure, and the position of the accent in words. These are necessary to determine the existence of a dissyllabic pronunciation where a monosyllabic now prevails, (or, as it may be called by an inversion of the real process, of resolution,) and to understand the rhymes. All my shortcomings in this respect, however, will be abundantly made up by the third edition of the Rev. E. A. Abbott's Shakespearian Grammar, which was passing through the press at the same time as these sheets. I shall have to make frequent reference to the chapter on Prosody, but as the work is indispensable to all my readers, I shall merely give Mr. Abbott's results, and leave the proofs to be gathered from his own accessible pages. On much relating to rhythm and scansion of lines there is some divergence of opinion between Mr. Abbott and myself, owing to the very different points from which our observations and theories take their rise, but the instances which he has collected and classified, and the explanations which he has given, must be fully considered by any future writer on the subject.

I regret that I did not note the lines containing a defective first measure, as these had been made a special study in Chaucer's prologue. In the preface to the Cambridge Shakspere, vol. i, p.

xvii, the following are quoted :-

No, I will not, for it boots thee not. What? TG 1, 1, 9 (21, 28). Fire, that's closest kept, burns most of all. TG 1, 2, 22 (22', 30). Is't near dinner time? I would it were. TG 1, 2, 37 (23, 67). Twelve year since, Miranda, twelve year since. T 1, 2, 14 (2', 53).

which, however, are none of them entirely satisfactory. In the

first edition, 1869, pp. 136. Revised and enlarged edition, 1870, pp. xxiv, 511. The Prosody, which only occupied 10 pages in the first edition, is expanded to 102 pages in the third. In the above text this 1870 edition will be cited as Abb., with a number annexed referring to the section.

first case the editors have accidentally omitted to notice the final what? which renders the line entirely defective. If we read, What not? or what boots not? the line would have only a third place trissyllabic measure. Thus, italicising the even measures,

No, I will not, for it boots thee not. What boots not? The numerous instances cited below of the dissyllabic use of fire and generally the syllabic value of r, renders the second and fourth instances incomplete. The objection raised by the editors "that one word should bear two pronunciations in one line is far more improbable than that the unaccented syllable before twelve is purposely omitted by the poet," is not tenable. The word year might be dissyllabic in both places, a trissyllabic fifth measure being not uncommon, and the use of the same termination sometimes as two distinct metrical syllables, and sometimes as part of a trissyllabic measure, is extremely common. We have it in two consecutive lines in

It is religion that doth make vows kept; But thou hast sworn against religion. KJ 3, 1, 53 (342', 279). Be patient, gentle queen, and I will stay. Who can be patient in such extremes? 3 H⁶ 1, 1, 109 (528', 214).

In the third example, the simple resolution of is't into is it, by the editors in their text, saves the metre. In the second we might also read that is. And in the last example an initial 'Tis may have dropped, as Pope suggests. These considerations serve to shew how cautious we must be, and how large a comparison of instances has to be made, before we can decide on such a point. It is from this feeling that I have thought it advisable to accumulate instances, and classify them as well as possible. Resolutions, trissyllabic measures in every place, real Alexandrines, and lines with two superfluous syllables, are well established, by the following collections. Defective first measures have still to be traced. The

1 The line: Ay, and we are betrothed; nay more our marriage hour, TG 2, 4, 93 (28', 179), cited by the editors of the Cambridge Shakspere as an instance of the "irregularity" of "a single strong syllable commencing a line complete without it," is a perfect Alexandrine, with the complete pause at the end of the third measure, and is so printed in their text. In the preface they put the Ay into a single line, and reduce the rest to five measures by reading we're. This instance is, however, complicated by the previous imperfect line: But she loves you, on to which the first words of this speech; Ay, and we are betrothed, might be joined, completing the verse. So that we really have one of those cases where "when a verse consists of two parts uttered by two speakers, the latter part is frequently the former part of

the following verse, being as it were, amphibious," Abb. 513; where numerous instances are cited. These sections belonging to two lines might be conveniently termed amphibitichs. In this case, to consider "Ay, and we are betrothed," as an amphistich, would be to confirm the Alexandrine would be to confirm the Alexandrine nature of the second part. The following instances, cited by Abb. ib., are then precisely similar; the amphistich is italicized. Hon. Of mine own eyes. Mar. Is it not like the king? Hor. As thou art to thyself. H1, 1, 42 (812, 58). Ham. No, it is struck. Hor. Indeed? I heard it not: then it draws near the season. H 1, 4, 5 (816', 4).

² Then the whining schoolboy with his satchel AY 2, 7, 31 (214, 145), seems a clear instance, but in the Globe edition the editors of the Cambridge

whole subject of English metres requires reinvestigation on the basis of accent. The old names of measures borrowed from Latin prosodists are entirely misleading, and the routine scansion with the accent on alternate syllables is known only to grammarians, having never been practised by poets.1

The reader should study the passages cited in Abb. 479a-486. About two out of three have four, and one out of fifteen has three." Another reader of the same lines might materially alter these ratios, so much depends upon the particular reader's own rhythmical feelings.

bott suggests, this accent is not needed for the scansion], porténts, precépts, prescience, record [still so called in law courts], sepúlchre, siníster, sojoúrn'd, something?, sweetheart, triúmphing, untó, welcóme, wherefóre. Words in -iseā: advértised, chástised, canónized, authórized, solémnised and sólemnized, rather than make an exception, which is improbable, introduce a second trissyllabic measure, and read: Straight shall our nupti-al rites be solémnized, MV 2. 9. 2 (190', 6)]

MV 2, 9, 2 (190', 6).]
Accent nearer the beginning than with us: archbishop, cément s., cómpell'd, cómplete, cónceal'd, cónduct, cónfessor, cóngeal'd, cónjure = entreat, cónsign'd, córrosive, délectable, détestable, dístinet, fórlorn, húmane, maintain, máture?, méthinks?, mútiners, myself?, Northampton, obscure, observant, persever, perspective, pioners, plébeians [the word is not frequent, it is certainly plebéians in H^a 5, ch. (463' 27), and TA 1, 1, 36 (690', 231), unless we read "Patrici-ans and pléb-eians we create," the italics shewing a trissyllabic measure; in C 1, 9, 1 (661, 7) I would rather read "That with the fusty plebeians hate thine honours," than "That with the fusty pléb-eians hate thine honours," the italics again shewing the nonours, the nature and trissyllabic measure; in C 3, 1, 53 (669, 101), I read "Let them have cushions by you. You're plebéians," and Mr. Abbott's scansion seems forced; again, "the senators and plebéians love him too," C 4, 7, 7 (681', 30), but AC 4, 12, 4 (936, 34) "And hoist thee up to the shouting plébeians," (unless we read unto with Keightley and make a trissyllabic measure: And hoist thee up unto the shouting plebeians,) and C 5, 4, 12 (685', 39) "The plebeians have got your fellow tribune," (which could be easily amended by adding fast, or now, or there, at the end of the line, in which case there would be a trissyllabic first measure,) seem real cases; but they are the only ones in Shakspere and, as we have seen, the reading may be faulty!], pursuit, purveyor, quintessence, récorder, rélapse?, rheumatic, sécure, séquester'd, súccessor, súccessive, tówards, útensils?, without.

In this connection the following extracts from Gill's Logonomia, pp. 128-138, are valuable, though they are much injured by his confused notions of the difference between accent and quantity.

GILL ON ACCENT AND METRE.

Cap. xxv. De Accentu.

Vocum prosodia vsu potiùs quam regulis percipitur: ea tota in accentu est. Accentus est duplex, Grammaticus, et Rhetoricus. Grammaticus est qua vocalis vna, aut diphthongus, in omni dictione affecta est. Rhetoricus, qui ad sensum animo altiùs infigendum, emfasin in vna voce habet potiùs quam alia. Monosyllaba omnia per se accepta accentum acutum habere intelliguntur: at composita, nunc in priori tonum habent; vt, (Horsman, shiphuuk), nunc in posteriori; vt (withstand, withdran, Himself). Quædam ita facilia sunt, vt accentum vtrobius recipiant, vt (tshurtsh yard, outrun, outraadzh).

Dissyllaba qua oxytona sunt, (biliiv', asyyr', aswaadzh', enfoors',

konstrain'): quà paroxytona, vt (pit'i, kul'er, fol'oou).

Trissyllaba quædam paroxytona sunt: vt, (regraater, biluved, akwainted); quædam proparoxytona; vt (mizer, desteni): quæ-

dam indifferentia; vt, (foar goo ing, foar staal er).2

Animaduertendum autem nos tanto impetu in nounullis vocibus accentum retrahere, vt nulla syllabarum longitudo, natura aut positione facta contraueniat: idque non in nostris tantum (for ester, kar penter): sed etiam in illis quæ doctuli à Latinis asciuerunt: vt, (AA ditor, kompet itor, kon stansi, redzh ister, tem perans, in stryyment, multityyd). Hie autem duplici cautela opus: prima, vt illa excipias quæ ad nos integra transierunt; quibus ea humanitate vtimur qua peregrinis, qui suo iure et more viuunt, vt (Amintas, Erinnis, Barika do). Secundò excipias illa à Latinis in io, quæ quanquam in nostrum ius concesserunt, proprium tamen accentum retinent in antepenultima; vt (opin ion, satisfak sion) et alia sic exeuntia (min ion, fran ion), etc.3

Plurisyllaba etiam (quod in alijs quas scio linguis non fit) accentum sæpius in quartâ recipiunt; vt (ok'yypeier, vidzh'ilansi, literatyyr): et omnia fere illa quæ in (muqger) exeunt aut (abl): vt (kos'terdmuqger, ei'ernmuqger, mar'tshantabl, mar'idzhabl, miz'erabl, on'orabl). mirum dixeris si tonum in quinta repereris, tamen sic lege (mul'tipliabl, vitrifiabl, Kon'stantinopl), et alia

fortasse plura.

Duo sunt quæ tonum variant: Differentia, et Numerus poeticus.

1. Differentia est, qua vox voci quodammodo opponitur: hæc accentum transfert in syllabam vulgariter accentuatæ præcedentem, vt (du

¹ Gill does not mark the position of the accent in these three words. In those subsequently cited he marks it by an acute on the vowel of the accented syllable, and neglects to distinguish long and short vowels in consequence, as he says in his errata: "Capite 25 et deinceps; accentuum notatio longarum vocalium quantitati veniam inueniet." I have, therefore, in my transcription restored the quantity, and replaced i by

j (=0i) and u by v (=yy), when it

appeared necessary.

2 Gill writes no accent marks in

these two words.

³ The term antepenultime here determines the dissyllabic character of the termination -tion = (-sion) in Gill's mind.

⁴ Gill does not distinguish (muqger) from (muqer); my transliteration is, therefore, also an interpretation. yuu taak mii reikht, or mis taak mii?) sie (with Hoould, un thaqkful, dis onestei, dis onorabl, dis onorablei) etiam, et (un meezyyrablei); huc refer (dezert) meritum, et (dezert) desertum aut solitudo, etc. Numerus poeticus proparoxytonis in [i] sæpe vltimam productam acuit, vt, (mizerei, konstansei, destinei); vnde etiam in prosâ ferè obtinuit, vt vltimâ vel longâ vel breui æqualiter scribantur, et pronuncientur, non acuantur tamen.

De Rhetorico accentu difficilius est iudicium; quia suum cuique

est, et varium. Exemplo res melius intelligetur.

(Moi song, if an'i ask whuuz grii vus plaint iz sutsh,

Dei, eer dhou let Hiz naam bii knooun, Hiz fol'i shoouz tuu mutsh,

But, best weer dhii tu Hoid, and never kum tu loikht:

For oon dhe erth kan noon but ei, dhein ak sents sound areikht.)

Diximus monosyllaba omnia acui, hoc est accentu Grammatico: at in orationis contextu illis tantum vocibus est accentus oratorius, siue quædam toni ἐνέργεια, quibus sensus vis et ἐνάργεια inest: reliquæ omnes præ his quodammodo barytonæ habeantur. Ego igitur sic ista lego, vt versus primus vno tenore, et æqualis fluat. In secundo tribus voculis accinitur (dei, naam, fol i): quia, ex sensu apparenti moriendum potius est carmini, quam nomen auctoris indicandum; cui tanta stultitia malum est omen. At ex implicità Antanaclasi, sine diastola Tŵy (doi'), et (er, let dhou niz naam bi knooun Doi'er); etiam cum priori tepidius erit, et sine accentu oratorio efferendum. Duos sequentes versus licèt ego sic legam, vt (нэіd), et (nev·er) in priori accentuem: (erth·, ei); et (dhəin),² in posteriori: alius tamen fortasse aliter: idque cum bona vtrinque ratione. Atque hæc de accentu acuto Grammatico, et Oratorio, præcepta sunt. Grauis ubique intelligitur, vbi alius non est accentus. Circumflexus [^] in alijs dialectis frequentius auditur quam in communi; vbi tamen ea est aliquando vocis alicuius prosodia, vt sensum mutet. Exemplo (oi am afraid of him) i. metuo ab illo : (9i am afraaid.3 ov him). i. quid de illo futurum sit timea.

Accentui inseruiunt interpunctiones: quià illæ vt sensum aperiunt, ita quantum possunt accentui viam sternunt. Eædem sunt nobis quæ Latinis, et vsus idem: sunt autem Κόμμα siue incisum [,], 'Υποδιαστολή aut subdistinctio [;], Κῶλον siue membrum [:], Περίοδος siue sententiæ et sensus integra complexio [.] His adjunge interrogationis notam [?] et exclamationis [!]. Παρενθέσει (scientibus loquor) nihil includi debet quod cum vllâ

- 1 The accent is not written here, but is inferred from the context. Observe that we had (des teni) a little above.
 - 2 Erroneously printed (dain).
- ³ Gill writes afraid, afraid, He had long previously explained a to mean (AA), and hence I have thus interpreted the sign, but the interpretation is probably incorrect. He has nowhere given a physiological description of the

effects which he means to indicate by the old Latin terms, acute, grave, and circumflex, which were perhaps in Latin the rising, the falling, and the rising and falling inflections, (. · · · · .) supra p. 12, but there is no reason to suppose that he had in view anything but stress for acute, its absence for grave, and a broadening i.e. opening or rounding or else excessive lengthening of the yowels for the circumflex.

voce in reliqua orationis serie syntaxin habet: at Υποπαρενθέσει [; j]1 illud quod abesse quidem potest, sed cum aliâ aliqua sententiæ voce construitur.

Exemplum.

Huc accedit Απόστροφος in (dh-efekt·),3 et in vocibus compositis Tφη sine maccaf [-] vt (Hart-eeting griif). Et vltimò (si tu concedas (lector) in Διαιρέσει, Διαστολή ["] in συναιρέσει, Άρπη [] vt in (okaa zion) trissyllaba; sed his et Υποπαρενθέσει in vsu frequenti, locus raró conceditur.

Cap. xxvi. De Metro.

Metrum apud nos largè acceptum, aliquando significat ipsa in carmine omoioteleuta: nonnunquam ponitur pro omni oratione adstricta numeris; sic enim metrum, et prosam opponimus. Sed hic pro omni mensura syllabæ, pedis, metri propriè dicti, et carminis

De Syllaba.

Syllabarum quantitas septem modis agnoscitur. 1. Vocali. 2. Diphthongo. 3. Accentu. 4. Positione. 5. Derivatione. 6. Præpositione. 7. Metaplasmo.

1. Vocalis et 2. Diphthongus.

Satis aparuit in grammaticâ, quæ syllaba longa aut breuis censeri debet, ex vocalibus, quas longas aut breues esse diximus: 1. Poetæ tamen illa in (vi) desinentia licenter corripiunt; quia in fluxu orationis accentus in própinqua syllaba eius longitudinem absorbet. At si syllaba accentu vllo grammatico, vel rhetorico afficiatur, non corripitur; vt, (mei moni)

2. (Yy) in fine anceps est; vt (nyy, tryy): at consona in eadem voce monosyllabâ sequente, longa est; vt, (syyr,6 pyyr). sie in dissyllabis, si accentum habeat: vt, (manyyr', refyyz') verbum: at accentus in priori, ultimam ancipitem relinquit; vt, in (ref'yyz. ref'yz) subst. 3. Vocalis, aut diphthongus, ante vocalem non cor-

- 1 This is a sign not otherwise noticed, probably of Dr. Gill's own coinage, for the printer had clearly to "make" the mark, the first time from (and ;, the second time, in the example, from ¿ and ;.
- 2 The original has " (Dhe (best said Hii) dhat), etc., where the parenthesis is clearly incorrectly put.
 - 3 Gill prints S'efekt.
- 4 Gill seems to intend to say that (okaa zion), which is really of four syllables, here reckons as three, from

the rapidity with which (i) is pronounced. See infra, p. 937, n. 1.

- 5 This vowel being represented by v in Gill never has the mark of prolongation placed over it; hence it has been uniformly transliterated (yy). A pure (y) in closed syllables does not seem to have occurred in English of so late a date.
 - 6 Observe, an (s) not an (sh), and
- see suitor, suprà, pp. 215, 922.

 7 The word is only written once réfez in Gill, but is repeated here to exhibit the "doubtful" quantity.

ripitur necesario ut apud Latinos. Sed contra, vocalis longa, aut diphthongus, ante vocalem semper producitur, si in se accentum habeat, vt (denoi ing, displai ed). 4. Vocalis, aut Diphthongus per synalæpham licentiâ poeticâ nonnunquam intercipitur: sed frequentissime intercidit (u), in (tu) datiui et infinitiui signo; et (e), in articulo (dhe), tamen non semper. in (Dhou) ante (art) diphthongus sæpe deficit.2

3. Accentus.

Omnis syllaba, accentum acutum habens aut circumflexum, longa est: idque maxime si syllaba dictionis prima non sit. Nam prima naturâ suâ breuis, accentum sæpe admittit, vt (go:ing, du:ing, an:i, spirit, bodi), quæ etiamsi ex vocali breues esse intelligantur, accentu tamen subinde communes fiunt vt in illo Choriambo (Laa di, ladii.).3

2. In trissyllabis etiam, acutus in breui ante liquidam, syllabam aliquando ancipitem facit, vt in (mal'adei, sim'oni, dzhen'eral,

ben efit.)4

3. Vocalis breuis in vltimâ, ante duplicem, aut etiam ante solam liquidam, accentu anceps fit. Vt (begin', distil', defer', proloq'). Idipsum etiam in monosyllabis accentu acutissimis fiet; vt, (aks., dzhudzh, fel, sin, soq, war, dzhar.) Quam formam quædam etiam ante mutam sequuntur; vt, (bud·) gemma, (but·) meta.

4. Omnis syllaba ante accentuatam breuis est: vt, (dezəir', abroo ad (?), aban don, devoi ded, divoin loi, biliiving, prevented): nisi obstet natura; vt, in (foorgo ing, foorspee king); aut positio, vt, (forgot'n forgiv'iq). Sed hic tantum valet accentus, vt in multis duplicatis alteram elidat, vt, (atend, apii riq, opoo zed, adres ed); pro (attend; appii'riq, oppoo'zed, addres'ed): Sed vt consonam elidat vel non, poetæ in medio relinquitur.

5. Syllabæ quæ solis constant consonantibus, quia accentum nunquam recipiunt, breues iudicantur; vt, (sad·l, trub·l, moist·n).

6. Accentus Rhetoricus longas præcedentes sæpenumero corripit: vt, (If yi bi aal thiivz, what Hoop Hav ei?) vbi vocales naturâ longæ in (yii, bii, maav) ratione accentuum in (AAI) et (oi) correptæ

4. Positio.

In diversis dictionibus positio sæpe valet vt apud Latinos, in eâdem dictione, accentus positioni præualet; ita vt in trissyllabis,

1 As Gill could not have used the word diphthong in the sense of digraph, more especially because he represents the (ai) in the first word by a simple sign j, we have here a confirmation of the theory that he pronounced his ai as a diphthong (ai), and not as a simple

vowel (ee).

This implies the pronunciation of thourt as (dhart) and not (dhourt).

No accent marked in Gill. The assumption of the choriamb -,

shews that the accents were intended as I have placed them. This passage should have been referred to suprà p.

281, 1. 34.

4 The exact meaning of this passage is doubtful, owing to the constant confusion of accent and quantity in Dr. Gill's mind, while he attempts to separate them.

Et licet omnis Metaplasmus ad syllabarum quantitatem agnoscendam non sit vtilis: tamen quia plurimæ eius species hic multum possunt, eas omnes simul explicabimus.

- 1 Written Waterdown, the first vowel probably stands for $\mathscr{X} = (AA^*)$ in Gill's notation.
- ² In the vocabulary I have introduced a second accent mark thus (Sem priq-

There can be no thought of (okaa zhon), which was probably never used, the (aa) having changed to (ee) before (zj) was reduced to (zh). The pronunciation (whatsever) is quite conjectural, as there is no authority for it. The hyphens represent Gill's apostrophes.

3 This refers to "Cap. xxvii., Carmen Rythmicum," which would have been interesting, had not Dr. Gill's utter confusion of accent and quantity rendered it entirely worthless. Thus speaking of heroic and Alexandrine verses he says: "Scenicum. et Epicum, vno ferè carminis genere contenta sunt: illud est vt plurimum pentametrum. Spenceri tamen Epicum, siue Heroicum, nonum quemque versum habet hexametrum: ad grauitatem, et quandam stationis firmitudinem. CONTRACTED WORDS.

The following list is taken from Abb. 460-473. All omitted syllables are here inserted in parentheses. A star * prefixed, shews that this contraction is acknowledged either in the same or a similar word, by Jones 1701, and will be found in the Vocabulary of the xvII th century to be given in Chapter IX. When † is prefixed, the instance is not from Shakspere himself. A subjoined (?) indicates that the passage cited in proof does not appear decisive.

assumes it, although the use of a trissyllabic measure would render it
unnecessary.

Other contractions.—Barthol(o)mew, Ha(ve)rford, †dis(ci)ple, ignom(in)y, †gen(fle)man, gent(le)man, gent(le), †eas(i)ly, par(i)lous = perilous, inter-(ro)gatories, can(dle)stick, †mar(ve)le, †whe(th)er, God b(e with) ye, see suprap. 773, in (hi)s, th(ou) wert, you (we)re, h(e) were, y(ou) are, she (we)re. In these five last cases, not-withstanding the orthography, the sound may have been, (dhou-rt, yuu-r, mi-r, yuu-r, shi-r). But in the passage cited for she (we)re, "'Twere good she were spoken with: for she may strew," H 4, 5, 5 (836, 14), the trissyllabic measure, which would be naturally introduced by any modern reader, obviates all difficulties. Similarly in the passages cited for this = this is, a trissyllabic measure removes all difficulties. Mr. Abbot says (461),

"it (this contraction) is at all events as early as Chaucer, Knighte's Tale, 233." On referring to the six-text edition, v. 1091, we find three MS. (Hengwrt, Cambridge, Lansdowne,) to which we may add Harleian, reading in various spellings, "We mote endure it this is the schort and playn," where we may either contract "endure't," or make is the schort a trissyllabic measure; but the Ellesmere MS. omits it, which seems the best reading, as the it is clearly superfluous, and the Corpus and Petworth omit the, which is not so commendable. Hence it is by no means clear that Chaucer ever said this for this is. Relying on the provincialism 'se, 's for shall, in KL 4, 6, 85 (873, 246), and Lady Capulet's thou's for thou shalt, which was evidently an accommodation of her language to the nurse's, RJ 1, 3, 6 (715', 9), Mr. Abbott would avoid several trissyllabic measures, by reading I'se for I shall, but this does not seem advisable. Wi(th), †w(ith) us, †w(ith) ye, were probably (wi, wi'us, wi'i). To these he adds d(o)off, d(o)out, proba(b)l(e).

Words contracted in pronunciation.—
Abb. 462, desirous of limiting the use of trissyllabic measures and Alexandrine verses as much as possible, suggests many elisions which often appear doubtful, and are certainly, for the most part, unnecessary. A grammarian who would count the syllables of Italian or Spanish verses on his fingers, would be led to conclude that final vowels were always elided before initial vowels, and that frequently a whole word, consisting of a single vowel, was lost in pronunciation. Turning to the musical setting of Italian words, and seeing only one

note written for the two or three vowels which thus come together, he would be strengthened in this opinion. But if he listens to an Italian singing or declaiming, he would find all the vowels pronounced, sometimes diphthongizing, but, as a rule, distinctly audible, without any connecting glide. Such open vowels are, however, generally pro-nounced with extreme rapidity, and perhaps this is what Mr. Abbott means by "softening," a term which he frequently uses in a manner phonetically unintelligible to me, thus: "R frequently softens or destroys a following vowel, the vowel being nearly lost in the burr which follows the effort to pronounce the r," Abb. 463, as alar(u)m, warr(a)nt, flour(i)shing, nour(i)sh, barr(e)ls, barr(e)n, spir(i)t; "R often softens a preceding unaccented vowel," Abb. 464, as confed(e)rates; "Er, El, and Le final dropped or softened, especially before vowels and silent h," Abb. 465. "Whether and ever are frequently written or pronounced whe'r or where and e'er. The th is also softened in either, hither, other, father, etc., and the v in having, evil, etc. It is impossible to tell in many of these cases what degree of 'softening' takes place. In 'other,' for instance, the th is so completely dropped that it has become our ordinary 'or' which we use without thought of contraction. So 'whether' is often written 'wh'er' in Shakespeare, Some, but it is impossible to say what, degree of 'softening,' though not expressed in writing, seems to have affected th in the following words, brother, either, further, hither, neither, rather, thither, whether, whither, having," Abb. 466, where he cites instances, which might certainly all have been used by a modern tainly all have been used by a modern poet who naturally speaks the words dissyllabically. A few words as or, ill, eer, have established themselves. It is impossible to say what liberty of contraction or change the xvith century poets allowed themselves in verse. " I in the middle of a trisyllable, if unaccented, is frequently dropped, or so nearly dropped as to make it a favourite syllable in trisyllabic feet," Abb. 467, where he cites, punishment, cardinal,

willingly, languishing, fantastical, residue, promising ;-easily, prettily ;hostility, amity, quality, civility;
officer, mariners, ladyship, beautiful,
flourishes, par(i)lous. "Any unaccented
syllable of a polysyllable (whether containing i or any other vowel) may sometimes be softened and almost ignored," Abb. 468, as barbarous, com-pany, remedy, implements, enemy, messengers, passenger, conference, majesty "a quasi-dissyllable," necessary, sacrificers, innocent, inventory, sanctuary, un-natural, speculative, incredulous, instruments. It is hardly conceivable that these vowels were habitually omitted in solemn speech. Abb. 469, thus explains the apparent docking of a syllable in proper names. Abb. 470, makes power, jewel, lower, doing, going, dying, playing, prowess, etc., frequent-ly monosyllables or "quasi-monosyllables." Abb. 471, remarks that "the plural and possessive cases of nouns in which the singular ends in s, se, ss, ce, and ge are frequently written, and still more frequently pronounced, with-out the additional syllable," but his instances of plurals are not convincing. We know that -ed after t, d, was often lost in olden time, as we now say it hurt for it hurted, but the instances cited in Abb. 472, by no means establish its general omission, or indeed its necessary omission in those very cases. Compare, however, Abb. 342.—Final-ed, as we see from Gill, was so regularly pronounced, that we should always rather keep than omit it, although Gill allows it to be frequently elided (supra p. 937, l. 35), and Abb. 474, shews that it was often omitted and pronounced in the same line. " Est in superlatives is often pronounced at after dentals and liquids. A similar euphonic contraction with respect to est in verbs is found in Early English. Thus 'bindest' becomes 'binst,' eatest' becomes 'est.' Our 'best' is a contraction for 'bet-est,' " Abb. 473, where he cites, sweet'st, kind'st, stern'st, secret'st, eld'st, dear'st, loyal'st, great'st, near'st, unpleasant'st, strong'st, short'st, common'st, faithfull'st, far-

TRISSYLLABIC MEASURES.

Unmistakeable trissyllabic measures occur in each of the five places, and occasionally two or even three occur in a single line. The complete lines are quoted and the trissyllabic measures are italicised. As Mr. Abbott seeks to explain away many of these examples by contractions and softenings, I have added the reference to his book wherever he cites the example. But it will be seen that he has not noticed many of these instances.

The following instances are not so well marked as the preceding, and many readers would account for them by an elision; but, the commonness of trissyllabic measures being now established, there seems to be no ground for such a violent remedy. Such trissyllabic measures as the following are frequent enough in modern poetry, where the lightness of the first syllable in the measure (depending on the strong accent on the last syllable of the preceding measure,) would make the use of the three syllables as a measure and a half, appear weak or antiquated. But Shakspere has no such scruples.

ALEXANDRINE VERSES.

Shakspere seems never to hesitate to use a pure Alexandrine or six-measure line when it suits his convenience. Such lines also occasionally contain trissyllabic measures. Some of these Alexandrines are well marked, in others the last word has such a strong accent on the last syllable but two that both final syllables fall on the ear rather as an addition to the last measure, a mere superfluous syllable, than a distinct measure by themselves. See supra p. 649,

I. 1. These two cases will be separately classed.

Mr. Abbott is always very unwilling to admit Alexandrines. He says: "A proper Alexandrine with six accents, such as 'And nów | by winds | and waves | my life|less limbs | are tossed'-DRYDEN, is seldom found in Shakespeare," Abb. 493, but he admits also that lines with five accents are rare, suprà p. 929, n. 1. As he intentionally confuses the number of accents (or syllables bearing a stress) with the number of measures, he and I naturally view verses from different points. The true Alexandrine has a pause at the end of the third measure. It consists therefore of two parts of three measures each. This is very marked in the heroic French Alexandrine, where there must be a natural pause in the sense as well as at the end of a word. Now such Alexandrines Mr. Abbott

calls "Trimeter couplets-of two verses of three accents each," Abb. 500, an entirely new conception, whereby normal Alexandrines are made to be no Alexandrines at all. The rule of terminating the third measure with a word is, however, not so strictly followed by English as by French and German writers. Every one admits that the final line in the Spenserian stanza is an Alexandrine, or at least has six measures. Now in the 55 stanzas of the Faery Queen, Book 1, Canto 1, I find 44 perfect Alexandrines (Mr. Abbott's Trimeter Couplets), 9 in which the third measure does not end with a word, and 2 (stanzas 30 and 42) in which, although the third measure ends with a word, the sense allows of no pause. This is quite enough to establish the rule for Shakspere's contemporaries, to shew that Mr. Abbott's Trimeter Couplets must be considered as regular Alexandrines, and to admit of the non-termination of a word with the third measure, which is inadmissible in French. Mr. Abbott begins by noting Alexandrines which are only so in appearance, "the last foot containing two extra syllables, one of which is slurred," (a term phonetically unintelligible to me) Abb. 494. These are those previously mentioned, and instanced below. But Mr. Abbott allows these two superfluous syllables to be inserted "at the end of the third or fourth foot," Abb. 495, without having any value in the verse. Thus, "The flux | of company. | Anon | a cáre|less hérd," AY 2, 1, 6 (210', 52), is made to have only five "feet," i.e. measures, as is also "To cáll | for récompense : |appéar it tó | your mínd," TC 3, 3, 1 (637', 3), and so on. This may do for "scanners," but will not do for listeners. These lines have distinctly six measures, with the true pause. "In other cases the appearance of an Alexandrine arises from the non-observance of contractions," Abb. 496. These "contractions" would have a remarkably harsh effect in the instances cited, even if they were possible. No person accustomed to write verses could well endure lines thus divided: "I dáre abíde no lónger (454). Whither (466) should | I flý," M 4, 2, 34 (803', 73). The line belongs to two speeches, and should may be emphatic. "She lé vell'd at | our púr pose(s) (471), ánd, | béing (470) royal," AC 5, 2, 123 (943, 339). Here there are two trissyllabic measures, and no Alexandrine. "All mór|tal cónse|quence(s) (471) háve | pronoúnced | me thús," M 5, 3, 1 (807, 5). "As mís|ers dó | by béggars (454); | neither (466) gáve | to mé," TC 3, 3, 30 (639, 142). Here to me are two superfluous syllables. I should be sorry to buy immunity from Alexandrines at the dreadful price of such Procrustean "scansion." Abb. 497, adduces a number of lines which he calls "apparent Alexandrines," and says they "can be explained," that is, reduced to five measures, "by the omission of unemphatic syllables." The effect is often as harsh as in those just cited. Abb. 498, calls a number of Alexandrines "doubtful," because by various contrivances, reading "on" for "upon" and so on, he can reduce them to five measures. But is this a legitimate method of deducing a poet's usage? Another contrivance is to throw the two first or two last syllables into a line by themselves, Abb. 499. Finally we have the "Trimeter Couplet" (500, 501), "the comic trimeter" (502), and "apparent trimeter couplets" (503), of which enough has been said. In order that the reader may see Mr. Abbott's method of avoiding the acknowledgment of Alexandrines in Shakspere, reference is made to all the passages in which he cites the following examples with that intention.

We must not forget, however, that Alexandrines are very common in R3, and that the odd line can be explained by an amphistych,

Shaksperian "Resolutions," Dissyllables corresponding to Modern Monosyllables.

The following instances of the resolution of one syllable into two, (as they seem to modern readers, who in fact have run two syllables together,) are so marked that it is impossible not to recognize that they were cases of actual accepted and familiar dissyllable pronunciation. They occur in the most solemn and energetic speeches, where the resolution at present would have a weak and traily effect, such as no modern, even in direct imitation of an old model, would venture to write. We must therefore conclude that all the cases were habitually dissyllabic, and that those numerous cases, where they appear to be monosyllabic as at present, must be explained as instances of trissyllabic measures, Alexandrines, or lines with two

superfluous syllables.

Mr. Abbott, however, by his heading "lengthening of words," Abb. 477, seems to consider the modern usage to be the normal condition, and the resolution to be the licence. Historically this view is incorrect, and the practise of orthoepists, though subject to the objection that "they are too apt to set down, not what is, but what [they imagine] ought to be," Abb. 479,-is all the other way. See Gill on Synæresis, suprà p. 937. Abb. 481, observes that "monosyllables which are emphatic either (1) from their meaning, as in the case of exclamations, or (2) from their use in antithetical sentences, or (3) which contain diphthongs, or (4) vowels preceding r, often take the place of a foot." The examples Abb. 481-486, are worth studying, but except in the case of r, they appear to be explicable rather by pauses, four-measure lines, accidentally or purposely defective lines, and such like, than by making go-od, bo-ot, go-ad, fri-ends, etc., of two syllables, or daughte-r, siste-r, murde-r, horro-rs, ple-asure, etc., of three syllables, which would be quite opposed to anything we know of early pronunciation. I have, however, referred to all Mr. Abbott's observations on the following citations.

take. In the passages from Beaumont

and Fletcher pleasures is the last word of the line, which may in each case have had only four measures with one superfluous syllable. The word pleasure occurs very frequently in Shakspere, and, apparently, always as a dissyllable, except in this one passage. This leads us to suppose the line to have only four measures, thus: You have done | our plea-|-sures much grace | fair la-|dies, just as the next line but three: You have ad-|ded worth | unto't | and lus-|tre; which again is closely followed by a line of three measures: I am | to thank | you for't |, shewing the, probably designedly, irregular character of the whole complimentary speech.

Jove, Jove! this shepherd's passi-on Is much upon my fashi-on AY 2, 4, 19 (212, 61). Observe that the rhyme is here an identical one, on the final syllable -on, as in the two preceding cases, and that it is not a double rhyme (pash un, fash un) like the modern (pæsh'en, fæsh'en), as this would make each line defective by a measure. The following examples shew that pas-si-on, fash-i--on, were really trissyllables. The apparent double rhyme passion, fashion, which occurs three times, is really an assonance of (-as-, -ash-), and will be so treated under assonances, see S with SH and Z, below. It is necessary to be careful on this point, because readers not aware of the trissyllabic nature of passion, fashion, or the use of assonances in Shakspere, might by such rhymes be led to imagine the change of -sion into (-shun), of which the only trace in Shakspere's time, is in the anonymous grammar cited, suprà p. 916.

SHARSPERE'S RHYMES.

After the preceding examination of Spenser's rhymes, pp. 862-871, we cannot expect to find any very great regularity in a poet of nearly the same date, who was doubtless familiar with Spenser's Faery Queen. Shakspere, however, did not allow himself quite so many liberties as Spenser, although his rhymes would be in themselves quite inadequate to determine his pronunciation. His poems are not in this respect more regular than the occasional couplets introduced into his plays. But the introduced songs are the least regular. He seems to have been quite contented at times with a rude approximation. Consonantal rhymes (where the final consonants are the same, but the preceding vowels are different,) are not uncommon. Assonances (where the vowels are the same, but final consonants different,) are liberally sprinkled. The combination of the two renders it quite impossible, from solitary or even occasional examples, to determine the real pronunciation of either vowel or consonant. It is therefore satisfactory to discover that, viewed as a whole, the system of rhymes is confirmatory of the conclusions drawn from a consideration of external authorities only in Chapter III, and to arrive at this result, the labour of such a lengthened investigation has not been thrown away. As it would be impossible for the reader to accept this statement, merely from my own impressions, I have thought it right to give a somewhat detailed list of the rhymes themselves, and I am not conscious of having neglected to note any of theoretical interest. The observations on individual rhymes or classes of rhymes will be most conveniently inserted in the lists themselves. As a rule, only the rhyming words themselves are given, and not the complete verse, but the full references appended will enable the reader to check my conclusions without difficulty.

resolu-tion absolu-tion dissolu-tion RL 352 (1017'). The first line would want a measure if we divided as above, so as to make the rhyme -ution, giving two superfluous sylla-bles to each. Hence we must con-

sider the rhyme to be on -on, and the last two lines to be Alexandrine. imaginati-on regi-on P 4, 4, Gower (993, 3). The versification of the Gower speech in P seems intended to be archaic, and the rhymes are often peculiar. This kind of identical rhyme is, however, not unfrequent in Shakspere, but it has not been thought necessary to accumulate instances. couplet is manifestly erroneous somewhere. As it stands the second line is an Alexandrine, thus, marking the even measures by italics (supra p. 334, n. 2). "For this play at this time is only in The merciful construction of good women," which introduces the common modern pronunciation (wim'n) with the accent thrown forward for the rhyme. This is very forced. Collier's substitution of: "For this play at this time we shall not owe men But merciful construction of good women;" introduces a rhyme owe men, women, which not even Spenser or Dryden would have probably ventured upon, and which the most modern "rhymester to the eye" could scarcely consider "legitimate." See Gill's pronunciation, supra p. 909.

Long and Short I, -IND.

[These rhymes were "allowable," perhaps, in the same sense as poets in the xvitth and xvitth centuries allowed themselves to use, as rhymes, words which used to rhyme in preceding centuries. If I have not been greatly mistaken, the following words would have rhymed to Palsgrave and Bullokar, perhaps even to Muleaster, though it is not likely that any actor of Shakspere's company would have pronounced them so as to rhyme. We find Tennyson allowing himself precisely similar rhymes to this day, supra p. 860. c. 1, and, as there shewn, the singularity of the present pronunciation (wind), leads poets to consider it to be (wind), as

many always pronounce it when reading poetry. The existence of such rhymes, which could not be accounted for by any defect of ear, gives a strong pre-sumption therefore in favour of the old sound of long i as (ii) or (ii), and not as (ai).]

Final unaccented Y with long I.

[These rhymes, which are fully accepted by Gill, who generally pro-nounced both as (ai), are very frequent in Shakspere as well as in Spenser, suprà p. 869. But final unaccented y also rhymes with long ee or as (ii), and hence we gather that the original (-e, -ii, -ii'e), out of which these were composed, were still in a transition state. Though they have now become regularly (-i), yet, as we have seen by numerous examples from Moore and Tennyson, suprà p. 861, the old licence prevails, although the rhyme (-i, -ii) is now more common than (-i, -oi), thus reversing the custom of the xvi th century.]

Long O with open OW=(oou).

[These rhymes shew that the aftersound of (u) had become faint, justifying its entire omission by the orthoepists of the xviith century. It is curious, however, to find that in the xix th century the (u) has reappeared, not merely where there was formerly (oou), but also where there was only (oo). It has no connection with either of the above sounds, having been merely evolved from (00), which replaced both of them in the xviith century. The changes of (ee, oo) into (eei, oou) are local, belonging only to the Southern or London pronunciation of English, although widely spread in America, and orthoepists are not agreed as to their reception; the further evolution into (ei, ou), or nearly (ai, au), is generally con-demned. But orthoepists have a habit of condemning in one century the rising practice of the next.]

Long U, UE, EW, IEW, and YOU.

The following examples shew, that whatever was the pronunciation, Shakspere found these rhymes sufficiently good for his purposes. According to Gill, he must have rhymed (yy, eu, ruu). The modern pronunciations are (iu, uu, Juu) in various words, and are generally held to rhyme. But the rhymes in Shakspere can no more justify us in supposing that he pronounced them identically, than the universal custom of German poets in rhyming ö, ü, eu with e, i, ei, would admit of us supposing that they would endure the former vowels, received as (œœ œ, yy y, ay oy oi), to be reduced to the second, which are received as (ee e, ii i, ai). This is are received as (ee e, ii i, ai). This is a most instructive example, because this custom of rhyming is universal among German poets. The corresponding pronunciation is extremely com-mon, and it is as much shunned by all who have any pretence to orthocpical knowledge, as the omission or insertion of the aspirate in English speech. We may, therefore, well understand Shak-spere using rhymes and making puns due to a perhaps widely spread pronunciation, while he would, as manager, have well "wigged" an actor who ventured to employ them on the stage in serious speech, -a fate impending on any German actor who should "assist" his author's rhymes by venturing to utter ö as (ee), ü as (ii), or eu as (ai). MR. RICHARD GRANT WHITE'S ELIZABETHAN PRONUNCIATION.

The following is an abstract of Mr. White's Memorandums on English Pronunciation in the Elizabethan Era, which forms an appendix to the 12th Vol. of his Shakespeare, supra p. 918, n. 1. Passages in inverted commas are nearly in the words of the original; those in brackets, and all palaeotypic symbols, are additions.

A was generally (ee) as in ale, make, tame; sometimes (AA) as in awe, saw, fall; the Italian (aa) and short (12)

are rarely indicated.

A final was almost always (ee.) This is shewn by the rhymes: say Seneca, Drayton's *Elegies*, 1627, p. 197; Remora delay, *Pastor Fido*, 1647, p. 215; from height of Idey = Ida, Seneca's *Ten* Tragedies, 1581, fol. 115. [See supra p. 912, under AI. In a note on MV 3, 1, 23 (192, 84), Mr. White observes that both folios and quartos spell Genowa or Genoway, and thinks this indicates the pronunciation Geno'a or Geno'ay, a position of the accent now common among the illiterate. But if we remember that the Italian is Genova, we may suppose Gen-o-wa to have been intended, or apply the suggestion, supra p. 133, note. According to the Cambridge editors, the quartos and first three folios have Genowa, and the fourth Geneva, a mistake for Genova. None end the word with ay. He adds:] "I am convinced that the final always the pure sound of the vowel; and the more, because such a pronunciation still pervades New England, where even the best-educated men, who have not had the advantage of early and frequent intercourse with the most polite society of Boston and the other principal cities, say, for instance, Carolinay for Carolina, Augustay for Augusta, and even Savannay for Savannah—the last syllable being rather lightly touched, but being still unmistakeably ay (ee) instead of ah (aa). If told of this, they would probably be surprised, and perhaps deny it; but it is true; and the pronunciation, although somewhat homely, is merely a

remnant of Shakespearian English." Say rather of English of the xvii th century, and that peculiar, if we may trust orthoepists at all. Compare the observations on German e final, suprà p. 119, note, col. 2.]

In angel, stranger, danger, manger, a = (x) or (x), shewn by the co-existence of the spellings an, aun [no instance

of aungel is cited].

In master, plaster, father, a = (ee). In Pastor Fido, v. 6, p. 202, ed. 1647, we find the rhyme: father either. Also in have, a = (ee). "He [the painter West] also pronounced some of his words, in reading, with a puritanical barbarism, such as haive for have. Leigh Hunt's Autobiography, p. 85, ed. 1860. "My mother, who both read and spoke remarkably well, would say haive and shaul (for shall) when she sang her hymns." Ibid. [Both xvii th century sounds, (Reev) being the late form of (Reev). The modern (Hæv) shortened the vowel, without altering its quality. We have (feedh 2) now as a provincialism, see suprà p. 750, n. 8.]

CH

had more frequently than now the sound k. [The instances cited—besche, belk, stinch, roches, for beseech, belch, stink, rocks,—are only cases of old k not changed into (tsh). The ch can hardly be supposed to represent k; yet Mr. White observes that chaste is cast in the first and second folios of WT 3, 2, 19 (315, 133), which might have been a misprint, and suggests that we should read, "he hath bought a pair of chaste lips of Diana, for "cast lips," in AY 3, 4, 10 (219, 16), which would spoil the joke of comparing Dian's lips to cast-off clothes. It cannot be supposed that there was any

variation between (tsh) and (k) in this and similar words. In LL 5, 1, 10 (150', 35), he supposes chirrah to represent shirrah.]

E.

The -ed was "rigorously pronounced," unless the contraction was indicated. Thus purpled, shuffled, were purp-l-ed, shuff-l-ed. [See supra p. 952.]

EA.

Generally ea = ee. [Here Mr. White recants a hasty opinion that ea = (ii), made in a note on LL 4, 1, 60 (145, 148), on finding that Mr. Collier's folio supplied declare as a rhyme to swear in that passage, thus:

succar in that passage, thus: To see him kiss his hand! and how

most sweetly 'a will swear, Looking babies in her eyes, his passion

to declare. But in thread, instead, ea was (ii), as inferred from the very frequent misspellings threed, threde, insteed, instede. [The inference is unsafe, because the spelling ea was not well fixed, see suprà p. 77.] In heart, heard, earth, dearth, hearth, ea appears to have had "the broad sound of a." [this "broad sound" should mean (AA), but (aa) is probably intended, as he spells] hart, hard, arth, etc. "The first and last are still preserved, and the others linger among the uncultivated. But heard and earth were conformed to analogy by some speakers and writers, and pronounced haird and airth; and this usage is not yet extinct in New England. Beard appears to have had four sounds, beerd (rarely), baird (the most usual), bard (rarely), save (the sound of the same letters and burd—the sound of the same letters in heard at this day." In creature, e-a two sounds [supra p. 947]. See were two sounds [suprà p. 947]. the rhyme: began ocean, Milton's Hymn on the Nativity, st. 5, and: ocean run; Browne's Pastorals, 1, 25, ed. 1772. [See: ocean motion, supra p. 954, col. 1, and: physician incision, supra p. 949, col. 2.] Ea was short (e) in leap'd, heap't.

EAU.

[In a note on H⁴ 1, 2, 7 (383', 28), Mr. White conceives that "squires of the night's body" and "thieves of the day's beauty," contained a pun on body, beauty, by giving the latter its modern French sound beauté. But eau in the English pronunciation of that time was not the French, as we have seen, suprà

p. 138, and the French sound of that time was not the modern one, supra p. 822 and p. 922.]

ET

was probably always (ee).

EW

was often (00), as it is now in shew, strew, as shewn by rhymes, and spelling shrow = shrew, Albion's England, 1602, p. 41; tew = tow, Ib. p. 144; shewres = showers, Ib. p. 193, [suprà p. 960, col. 2, under the rhymes to So.] But ew was also (uu), "and even shew, the preterite, had that pronunciation, which it still preserves in New England." In sue, rue, true, Louis, ew was "very commonly used" for (uu).

GH

was more frequently f than at present. Compare the rhymes: daughter after, Pastor Fido, 1647, p. 150, Romeus and Juliet, ed. Collier, p. 65; taught soft, Browne's Pastorals, 1, 68; and the spelling: raughter = rafter, Lilly's Gallathea, act 1, sc. 4. But gh was also silent. The following rhymes are cited from Collier, Coleridge, and Shakespeare, 1860: oft naught, Passionate Pilgrim; taught aloft, Surrey's Forsaken Lover; shaft caught, Chapman's Hero and Leander; aloft thought, Chapman's Hesiod; after manslaughter, Barclay's Ecologue II. [See Shakspere's rhymes, supra p. 963, col. 2.]

H.

Probably more often dropped than at present.

had the sound (ii) in monosyllables and many other places, as shewn by the misspellings in the folio 1623: the world to weet (=wit) AC 1, 1, 11 (911', 39); spleets (=splits) what it speaks AC 2, 7, 67 (924, 129); the breeze (=brize) upon her AC 3, 10, 6 (928', 14); a kind of weeke (=wick) or snuffe H 4, 7, 29 (839, 116), quarto 1604; At whose abuse our flyring (=fleering) world can winke, Churchyard's Charity, 1595; Doth neither church, queer (=quire, choir), court, nor country spare, Ibid; In Dauid's Psalms true miter (= metre) flows, Churchyard's Praise of Poetry, 1595. The spelling spreet for spirit, sprite, or spright, is very common. "Which the High goat (= he-goat) as one

seeing, yet reserving revenge, etc.," Braithwaite's Survey of History, 1638, p. 342. [See Wheeson, suprà p. 930.]

was generally (ii), but pierce, fierce, were "very generally pronounced purse and furse" [meaning (pas, fas), or (peas, feas), but the xvith century sounds were professedly, (pers, fers)].

was more often silent than now, as shewn by the spellings fautes = faults, haulty = haughty, Ralph, Rafe = Ralph; but was heard in could, should, would, down to past the middle of xvII th century. [In a note on LL 5, 1, 5 (150, 22), Mr. White mentions that l in could, would, is heard in the old pronunciation of the eastern United States, see suprà p. 871, col. 2, and p. 961, col. 2, under OO.] The spelling jelious (Albion's England, c. 84, p. 349, ed. 1606) may indicate the sound still retained in rebellious, stallion.

O, OA.

There was great irregularity in the elling. "Some well-educated oldcountry folk (Mrs. Kemble for instance) pronounce toad with a broad dissyllabic utterance of both vowels, the first long, the second short-to-ad. The same pronunciation obtains in a less degree with regard to throat, road, load, and other like words." But Shakspere used "the simple sound of o" [meaning perhaps (oo), but see supra p. 94]. One was the same as own. The modern prefixed w is like the Dorsetshire whot, wold, whome, dwont, pwint, cwot = hot, old, home, don't, point, coat.

OI

was simple i in join, point, boil, etc., down to Pope's time, suprà p. 134.

Early in the Elizabethan era oo expressed "those sounds of u—as in cud and blood, intrude and brood—for which it now stands," that is (o, uu?). The use of o-e, was meant perhaps to indi-cate the old sound (oo). "Although we often find room spelled rome, we never find Rome spelled Room, or either word rume or rum." The sound (Ruum) was one "of the many affectations" of the xvIII th century. Moon. frequently spelled mone, rhymes with

Birone LL 4, 3, 70 (148', 230), and probably had the long o sound. [In a note on the passage, he repudintes the notion that Birone should be read (Biruun'), apparently because the name here rhymes with moon, or because Mr. C. J. Fox said Touloon in the House of Commons; but see supra p. 961. In a note on MN 5, 1, 28 (177', 139), the rhyme: know woo, makes him suppose that woo and woe had the same sound. But see rhymes to 1000, suprà p. 961, and Salesbury, p. 785. And on KJ 5, 7, 1 (354', 2), reading 'poor brain,' instead of 'pure brain,' he observes: "The original has pore, the commonest spelling of 'poor' in the folio, and in other books of the time, representing the old pronunciation of that word, which is still preserved in some parts of the United States." The Cambridge editors say that in all the copies known to them the reading is pure, and not pore.

OU

had either the sound (au) or (uu).

QU

was (k) in *banquet, quality, quantity, quay, quern, quintain, quoif, quod, quoit, quote, and perhaps quart, and quit. [Those words marked are still frequently so pronounced.] LL 5, 2, 142 (154, 279), perhaps contained the pun *qualm*, *calm*; as also 2 H 2, 4,11 (419, 40), where the Hostess has calm, meaning qualm, and Falstaff takes the word as calm. [Price, 1668, gives "qualm sudden fit, calm still quiet," among his list of differences between words of like sound.]

"before a vowel had often the sound of sh, as it has now in sugar and sure. Such was its sound in sue, suit, and its compounds, and I believe in super and its compounds, and in supine and supreme. Sewer was pronounced shore in the Elizabethan era. Hence, too, shekels was spelled sickels" in the fo. MM 2, 2, 64 (74', 149). [The Cambridge editors quote from Notes and Queries, vol. 5, p. 325, the observation that shekels is spelled sickles in Wyc-liffe's Bible. This is not an instance of s and sh interchanging in sound, but of different transcriptions of a Hebrew word (shewel) which Jerome Latinized into siclus, of course the im-

mediate origin of Wycliffe's spelling, and hence probably of the folio reading. Referring to LL 4, 1, 37 (144', 109), see supra p. 215, note, he says that in LL 3, 1, 77 (143, 191), sue is printed shue. It is not so in the fo. 1623, and the Cambridge editors do not note the form.]

TH

probably more frequently had the sound of (t) than at present. Compare the common spellings: nostrils nosethrills, apotecary apothecary, au-tority authority, t'one the one, t'other the other [t'one, t'other, are thought to have been that one, that other = 't one 't other], trill thrill, swarty swarthy, fift fifth, sixt sixth, eight eighth [the last three are quite modern spellings and sounds], Sathan Satan, stalworth stalwart, quot, quote, quod, quoth. Less usual examples: whats tys this, twice in Wyt and Science, Shak. Soc. ed. p. 21 [compare the change of δ to t after d, t in Orrmin, suprà p. 490, l. 22, and p. 444, n. 2, but here tys may be simply a misprint]; a pytheous piteous crye, Robert the Devyll, p. 6; in golden trone throne, Seneca's Ten Tragedies, 1581, p. 124 [compare Salesbury, suprà p. 760, n. 3]; th' one autentique authentic, Daniel's Rosamond, 1599, sig. Cc 2; dept depth of art, Browne's Pastorals, 2, 52; Be as cautherizing cauterizing, Tim 5, 1, 48 (761', 136), ed. 1623 [it is really misprinted as a Cantherizing in that folio, the other three folios read as a catherizing, cauterizing was Pope's conjecture, other editors read cancerizing, the instance is therefore worth-less]; the Thuskan Tuscan poet, Drayton's Nymphidia, 1627, p. 120; with amatists amethysts, Arcadia, 1605, p. 143; call you this gamouth gamut, four times, TS 3, 1, 24 (240', 71), ed. 1623 [the other folios have gamoth, the derivation is obscure]. Observe the interchange of t, th, in Japhet, Batseba, Hithite, Galathians, Loth, Pathmos, Swethen, Goteham, Gotes, Athalanta, Protheus, Antony, Anthenor, "throughout our early literature." See also in Sir Balthazar Gerbier's Interpreter of the Academie for Forrain Languages and all Noble Sciences and Exercises, 1648, 4to., where the writer, a Fleming, whose "associations were with the highest - bred English people of his day, . . . intended to ex-

press with great particularity the Eng-lish pronunciation of the day, and it specially became him to give the best." Thus he spells leftenant, Nassow. "In this singular book, which is printed with remarkable accuracy, we find words spelled with th in which we know there was only the sound of t, and, what is of equal importance, words written with t which were then, as now, according to received usage, spelled with th, and which have been hitherto supposed to have been pro-nounced with the θ (th) sound." The examples are With Sundayes=Whit Sundays, may seth = set, will theach = teach, strenckt = strength, yought = youth, anathomie = anatomy, fourthy = forty, seventhy = seventy, seventheen = seventeen, dept = depth, hight = height, sigth, sigthed = sight, sighted, rethorike =rhetoric, braught = broth, the French

is potage.

To this refer the puns "that most capricious [punning on caper = a goat] poet Ovid among the Goths," AY 3, 3, 3 (218', 9); and "Note, notes, forsooth, and nothing," MA 2, 3, 16 (118', 59). Compare "no hearing, no feeling, but my sir's song, and admiring the nothing of it," WT 4, 4, 164 (324', 625). Let the reader "discover if he can what this means, if nothing was not pronounced noting. Let him explain too, if he can, the following passage (which no one has hitherto attempted to explain), 'Armado.-But to have a love of that colour, methinks Samson had small reason for it. He surely affected her for her wit. Moth .- It was so, sir, for she had a green wit, LL 1, 2, 51 (138', 91), except on the theory that the th was pronounced as t, and that the Page puns, and alludes to the green withes which Dalilah vainly used as bonds for Samson. And here compare Gerbier's [here misspelled Bergier's in the original work] spelling With-Sundayes, and conversely the frequent spelling of the preposition wit in writings of an earlier date." Notice d for th, and conversely, in murder, further, fathom, hundred, tether, quoth. "I believe that in the Elizabethan era, and, measurably, down to the middle of the seventeenth century, d, th, and t, were indiscriminately used to express a hardened and perhaps not uniform modification of the Anglo-Saxon 8, a sound like which we now hear in the French pronunciation of

mourtre, and which has survived, with other pronunciations of the same period, in the Irish pronunciations of murder, further, after, water, in all of which the sound is neither d, th, nor t." [He alludes to the very dental t, $d = (t \uparrow, d \uparrow)$ common on the Continent, still heard in some combinations in Lancashire, Yorkshire, Westmoreland, and the Peak of Derbyshire, and probably much more widely; the Irish seems to be complicated with a post-aspiration (th, dh). In Yorkshire water is sometimes (waa-tfer)and almost (waa-tfuer), and Southerners, in trying to imitate it, call it (waa th.). In the following notes, Mr. White pursues this subject further.] LL 1, 2, enter Moth (137'). "I have not the least doubt that the name of Armado's Page is not Moth, but Mote—a 'congruent epitheton' [LL 1, 2, 9 (138, 14)] to one whose extremely diminutive person is frequently alluded to in the play by phrases which seem applicable only to Tom Thumb. That 'mote' was spelled moth we have evidence twice in one line of this play [LL 4, 3, 39 (148, 161)], which stands in the original [in the quartos and folios]: 'You found his Moth, the King your Moth did see; also in the following from KJ 4, 1, 29 (346', 92): 'O heaven, that there were but a *moth* in yours;' and, in fact, in every case in which the word appears in the first folio, as well as in all the quartos. Wicliff wrote in Matthew vi.: were rust and mought distrycth' [in Forshall and Madden's ed., Matt. vi. 19, older version, "wher rust and mouthe distruyeth," later version, "where ruste and mouste destricth, where we have the very same diversity of th and t]. Indeed, it seems far from improbable that the two words were originally one, and that 'mote' is not, as Richardson supposes, from 'mite.' For both 'mite' and 'mot[e]' are found in Anglo-Saxon, in which language 'moth' is moghte [mog de, mohde, or modde, according to Ettmüller, p. 232, who refers the word to the root mûgan, mûhan, to be able, to cover, to heap up; this accounts for the z so often found in old writings, and the two sounds (moot, mooth) are similar to the two sounds (draat, drauth), see suprà p. 963; mite, ags. mîte, from mîtan, to eat; mote, ags. mot, is of very uncertain origin]. But whether the name is Moth or Mote, it is plain

that the pronunciation was mote." In a note on the fairy's name, Moth, MN 3, 1, 49 (169, 165), Mr. White notes that the Moth of the old editions means mote, and quotes from Withal's Shorte Dictionarie for Young Beginners. London, 4to., 1568. "A moth or motte that eateth clothes, tinea. A barell or great bolle, Tina, næ. Sed tinea, cum e, vermiculus est, anglice, A mought;" and from Lodge's Wits Miserie, or the World's Madnesse, "They are in the aire like atomi in sole, mothes in the sun." On TS 2, 1, 16 (237, 43), he remarks that 'Katharina,' had the th sounded as t, as shewn by the abbreviation Kate. [So also Jones, supra o. 219.] On pother, KL 3, 2, 9 (862', 50), he remarks: "This word was spelled powther, pother, podther, and pudder. In the first three cases it seems to have been prouounced with the th hard; and been pronounced with all the live is then the word 'potter,' which is used in this, but not, I believe, in the mother country." [But the modern (padh'n) favours an old (pudh'er), which, with the intershaper of (d) and (dh) exthe interchange of (d) and (dh), ex-plains everything,] Bermoothes, T 1, 2, 53 (4, 229), is the same as Bermudas. In the introduction to MA, vol. 3, p. 227, Mr. White very ingeniously shews that if we read *Nothing* as *Noting*, the title becomes intelligible, "for the much ado is produced entirely by noting. It begins with the noting of the Prince and Claudio, first by Antonio's man [overheard MA 1, 2, 4 (113', 9)], and then by Borachio, who reveals their conference to John [heard MA 1, 3, 19] (114', 64)]; it goes on with Benedick noting the Prince, Leonato, and Claudio in the garden [the fowl sits MA 2, 3, 26 (119, 95)]; and again with Beatrice noting Margaret and Ursula in the same place [Beatrice runs to hear MA 3, 1, 3 (120, 25)]; the incident upon which its action turns is the noting of Borachio's interview with Margaret by the Prince and Claudio [see me MA 2, 2, 14 (118, 43); you shall see MA 3, 2, 51 (122, 116); saw MA 3, 3, 57 (123, 160); did see MA 4, 1, 41 (126, 123, 160); did see MA 4, 1, 41 (126, 191)]; and finally the incident which unravels the plot is the noting of Borachio and Conrad by the Watch [act 3, sc. 3]. That this sense, to observe,' 'to watch,' was one in which 'note' was commonly used, it is quite needless to shew by reference to the literature and lexicographers of Shake-

speare's day; it is hardly obsolete; and even of the many instances in Shake-speare's works, I will quote only one, 'slink by and note him,' from AY 3, 2, 77 (217, 267)." [Compare also LL 3, 1, 6 (142, 25), "make them men of note-do you note me?" Mr. White then quotes the assonance, which he regards as a rhyme: doting nothing S 20, 10 (1033'), see suprà p. 955].

[The whole of this ingenious dissertation apparently arose from the

passage:-

Balthazar. Note this before my

There's not a note of mine that's worth the noting

D. Pedro. Why, these are very crotchets that he speaks;

Note, notes, forsooth, and nothing."-

MA 2, 3, 15 (118', 57).

This is the reading of the Quarto-and Folios, for which Theobald proposed noting, a correction which seems indubitable. Nothing is given as (noth-iq) with a short vowel, the precursor of our (noth-iq), by both Bullokar and Gill, and although the shortness of the vowel did not stand in the way of Shakspere's assonance, just quoted, nor would have stood in the way of such distant allusions as those among which it is classed, suprà p. 922, yet it is opposed to its confusion with (noot iq). Still I have heard a Russian call nothing (noot iq), with the identical (00) in place of (00) as well as (t) for (th). Acting upon this presumed pun, noting, nothing, Mr. White inquires whether the title of the play may not have been really "Much ado about noting," and seeks to establish this by a wonderfully prosaic summary of instances, all the while forgetting the antithesis of much and nothing, on which the title is founded, with an allusion to the great confusion occasioned by a slight mistake-of Ursula for Hero which was a mere nothing in itself. The Germans in translating it, Viel Lärm um Nichts, certainly never felt Mr. White's difficulty. It seems more reasonable to conclude that in MA 2, 3, 16 (118', 59), and WT 4, 4, 164 (324', 625), nothing was originally a misprint for noting, which was followed by subsequent editors. It is the only word which makes sense. In the first instance, it is required as the echo of the preceding words; in the second, Autolycus says: "My clown . . , grew

so in love with the wenches' song that he would not stir his pettitoes till he had both tune and words; which so drew the rest of the herd to me, that all their other senses stuck in ears; . . . no hearing, no feeling, but my sir's song, and admiring the noting of it;" where song and noting correspond to words and tune; and this serves to explain the joke in MA, where Balthazar, by saying that "there's not a note of his that's worth the noting," having already punned on note = observe, and musical sound, puns again on noting = observing and putting into music; and in D. Pedro's remark, the only pun is on crotchets, i.e., either the musical notes or the puns which Balthazar is uttering. The joke on noting, and nothing, supposing the jingle to answer, is inappreciable in both cases. But dismissing all reference to nothing and noting as perfectly untenable, there is no doubt that Mr. White has proved Moth in LL to mean Mote or Atomy, RJ 1, 4, 23 (717, 57), and in all modernized editions the name should be so spelled, as well as in the other passages where moth means mote. Again, in the passage LL 1, 2, 52 (138', 94), there can be no doubt that green wit alludes to Dalilah's green withe. This interpretation is also accepted by the Cambridge editors. But how should wit and withe be confused? Have we not the key in that false pronunciation of the Latin final -t and -d as -th, that is, either (th) or (dh), which we find reprobated by both Palsgrave and Salesbury (supra p. 844, under D and T, and p. 759, note 4)? There is no reason to suppose that wit was even occasionally called (with); we have only to suppose that Mote-who is a boy that probably knew Latin, at least in school jokes, witness "I will whip about your In-famie Vnum cita," LL 5, 1, 30 (150', 72) [the Latin in this play is vilely printed, by-the-bye, and this vnum cita is sufficiently unintelligible; Theobald reads circum circa; another conjecture is manu cita; perhaps intra extra may have been meant, compare Liv. 1, 26, "verbera, vel intra pomoerium vel extra pomoerium," but it was, no doubt, some well-known school urchin's allusion to a method of flogging]—would not scruple, if it suited his purpose, to alter the termination of a word in the Latin school fashion, and make (wit) into (with) or (widh) or to merely add on the sound of (th), thus (witth), as we now do in the word eighth = (eetth). We find him doing the very same thing, when, for the sake of a pun, he alters wittoll, as the word is spelled in the fo. MW 2, 2, 83 (51', 313), into wit-old, LL 5, 1, 26 (150', 66). But the word withe, ags. wivig, with a long vowel, is otherwise remarkable. It is now called (with) by most orthoepists, Perry giving (widh) and Smart (weidh). The long ags. i would make us expect (ai), but it is one of the words which has remained unchanged. Even Smart gives (widh i), which is the complete word, though Worcester writes (with i). These varieties are due to its being a word which orthoepists are probably not in the habit of hearing and using. The Scotch say (wid-i, wed-i). Could withe have ever been called (wit)? It is possible, just as fift, sixt, cited by Mr. White, had (t) in ags. and as late as Gill, but have now (th). That th, t, were used in a very haphazard way in Latin, Greek, and Hebrew words in the xvi th and even xvii th century is well known (suprà p. 219), and probably there was great uncertainty of pronunciation in such words, partly through ignorance, and partly perhaps, because, notwithstanding what Bullokar says, supra p. 842, l. 19, th in Latin and Latinized words may have been by a large section of scholars called (t). To this category may be referred the pro-nunciation of Goth as (goot), AY 3, 3, 3 (218', 9), which is certainly intended. The usages of the Fleming Gerbier are not entitled to much weight. He probably could not pronounce (th), and identifying it with his own (t), which was also his pronunciation of (t), became hopelessly confused. In his own Flemish, th and t had the single sound (t). His With-Sunday may be a mere printer's transposition of letters for Whit-Sunday. There There does not appear to be any reason for concluding that the genuine English th ever had the sound of (t), although some final t's have fallen into (th) .- As regards the alternate use of d and th in such words as murther, further, father, etc., there seems reason to suppose that both sounds existed, as they still exist, dialectically, vulgarly, and obsolescently. But we must remember that (b, d, g) between vowels have a great tendency in different languages to run into (bh, dh, gh). Thus in German, aber,

schreiben, become dialectically (aa bher shrai bhen). See examples in Pennsylvania German, supra p. 557. In Danish d medial and final is generally (dh), though not distinguished in (dn), though her canaly writing, and similarly g in the greater part of Germany becomes (gh, gh) in the same positions. In Hebrew the pairs (b bh, d dh, g gh) had only one letter a piece. Hence (d, only one letter a piece. Hence (d, dh) forms no analogy for (t, th). The upshot of Mr. White's researches seems, therefore, to be that writers of the xvith and xviith centuries were very loose in using t, th, in non-Saxon words. That this looseness of writing sometimes affected pronunciation, we know by the familiar example author and its derivatives. Thus Mätzner notes, Eng. Gram. 1, 132: "In words derived from ancient languages," observe the limitation, "th often replaces t: Anthony (Antonius), author (autor), prothonotary (protonotarius); we also find lanthorn as well as lantern (lanterne, lat. laterna, lanterna)." Could this last spelling have arisen from a false etymology, arising from the common employment of transparent horn in old lanterns? The h does not appear to have ever been sounded. "Old English often writes t in this way: rethor (rhetor), Sathanas (Satanas), Ptholomee, etc. The modern English anthem, old English antem, ags. anti-fen, arose from antiphona."]

U.

"U, when not followed by e, had very commonly that sound (very unfitly indicated by oo) which it has in rude, crude, and the compounds of lude, and of which the 'furnitoor, literatoor, matoor,' of old-fashioned, though not illiterate, New-England Such phonofolk is a remnant. graphic spellings as the following, of which I have numerous memorandums, leave no doubt on this point: ugly ougly, gun goon, run roon, clung cloong, spun spoon, curl coorle, and conversely poop pup, gloom glum, gloomy glumy." [In all but the last two instances the sound was (u), and they are corroborations of the statement that short u was (u) or (u) in the xvith century. See suprà p. 167. In a note on Puck, MN 2, 1, 3 (164', 18), vol. 4, p. 101, Mr. White says that previously to Shakspere it was always spelled powke, pooke, or pouke; and in vol. 5, p. 143, in a note on "muddied in Fortune's mood," AW 5, 2, 1 (276, 4), he notices the pun, mood, mud (see suprap. 926), spoiled by Theobald's correction into moat, adopted by Warburton. Probably we have the same pun, or error spelling, 2H⁴ 2, 4, 13 (419, 43), where "muddy rascal" is probably a joke on "moody rascal."]

URE.

"That ure final was generally, if not universally, pronounced er among even the most polite and literate of our Elizabethan ancestors, no observant reader of the books of their day, or even those of the latter part of the seventeenth century, need be told."

[The usage was not general, or con-

firmed till the xvII th century. The transition was (-tyyr, -tuur, -ter), compare Mr. White's remarks on U.] Compare the spellings venter venture, Milton's Comus, v. 228, ed. 1673, also in other books, nurter nurture, futer future, tortor torture, vulter vulture; joynter jointure TS 2, 1, 127 (239', 372) in fo. 1623; rounder roundure KJ 2, 1, 52 (337, 259), in fo. 1623, wafter wafture JC 2, 1, 63 (771', 246) in fo. 1623; also monsture monster, Albion's England, ed. 1602, p. 162. [See supra p. 200, l. 11, and the rhymes: departure shorter, enter venture, supra p. 954. Thomas Gray, 1716-42, in his Long Story, rhymes: satire nature, ventured enter'd.]

Mr. White adds: "Some readers may shrink from the conclusions to which the foregoing memorandums lead, because of the strangeness, and, as they will think, the uncouthness, of the pronunciation which they will involve. They will imagine Hamlet exclaiming:—

--- 'A baste that wants discourse of rayson Would haive moorn'd longer!'

O, me prophetic sow!! me ooncle!

'A broken voice, and his whole foonetion shooting Wit forms to his consayt, and all for noting!'

and, overcome by the astonishing effect of the passages thus spoken, they will refuse to believe that they were ever thus pronounced out of Ireland. But let them suppose that such was the pronunciation of Shakespeare's day, and they must see that our orthoepy would have sounded as strange and laughable to our forefathers, as theirs does to us." Of these pronunciations we have no authority for haive, me, shooting, wit, noting, as representatives of have, my, suiting, with, nothing,—(Haav) or (Hææv), (mei) or (mi), (syytiq, with, nothid), being the only pronunciations which external authorities will justify. The example is, however, quoted, as the first attempt which I have seen to give complete sentences in Shaksperian pronunciation, the un-Italicized words being supposed to have their present sounds.

SUMMARY OF THE CONJECTURED PRONUNCIATION OF SHAKSPERE.

It now remains from these indications to draw up a scheme of Shaksperian pronunciation, sufficiently precise to exhibit specimens in palaeotype. Shakspere was born in 1564, became joint proprietor of Blackfriars Theatre¹ in 1589, and died in 1616. He was a

¹ This is the usual belief. Mr. Halliwell, in a letter in the Atheneum of 13 Aug., 1870, p. 212, col. 3, says that he had recently discovered a series of documents concerning the establishment

of the Globe and Blackfriars theatres, which dissipate a mass of conjecture and throw much light on the history of the Elizabethan stage. "It is now certain," he says, "that Shakspeare, Warwickshire man, and our chief authority for the pronunciation of the time, Dr. Gill, a Lincolnshire man; but such local and personal peculiarities must be disregarded. What we want to assign is the pronunciation in which his plays were acted, during the last decade of the xvi th and the first of the xvii th century. This pronunciation may be fairly assumed to be that determined by the preceding quarter of a century, during which the actors must have acquired it, and, judging from stage habits in the xix th century, it will probably have been archaic.

Consonants do not present the slightest difficulty, except in respect to syllabic R (p. 951) and L (p. 952), the guttural or mute GH, and S, T. Although we have much reason to suspect a use of vocal R (= x) similar to that now in vogue (p. 196), especially from the influence of final r on the pronunciation of the preceding letters, as in the rhymes pp. 964-6, yet we have absolutely no authority for such a conclusion. Even Cooper's words (p. 200), which seem to convey the distinctest intimation, are not decisive. Hence no attempt will be made to distinguish R into (x, r), but the modern Scotch (r) will be assumed in all cases. Syllabic R and L will, therefore, be written (er, el). Thus—

As respects GH, there seems to be no doubt that it was still indicated in speech. The interpretation of Salesbury's words, cited on p. 210, was slightly modified by Dr. Davies in revising p. 779, and it is evident that we must assume the (kh) to have been very lightly touched. All those who are familiar with the various local pronunciations of German, know well that there are extreme differences in the force with which the breath is expelled when pronouncing (kh). Shakspere certainly did not find his utterance of this sound sufficiently strong to debar him from disregarding it altogether in rhymes (p. 963), which however does not shew that it was not pronounced; compare the analogous rhymes (oo, oou), p. 961, and the assonances, p. 955. But we should probably be more justified in following the example of Smith and Hart, who wrote (H) or (H'), p. 210, than that of Gill, who identified the sound with the Greek x

who is more than once alluded to by name, was never a proprietor in either theatre. His sole interest in them consisted in a participation, as an actor, in the receipts of 'what is called the house.'" And in the Athenaum of 24 Sept., 1870, p. 398, col. 1, he explains that "this does not mean what is now implied by the ordinary expression of an actor sharing in the receipts of the

house. In Shakspeare's time, the proprietors took absolutely the entire receipts of certain portions of the theatre. 'The house' was, therefore, some other part or parts of the theatre, the receipts of which were divided amongst Shakspeare and other actors, and in which a proprietor had no share, unless, of course, he was an actor as well as a proprietor."

=(kh), ibid. Hence (H) will be adopted in the examples. 1 See

also suprà p. 477, and note 1.

The S was apparently often (z) under the same circumstances as at present. T, S, were also often (s) where they are now so pronounced in French. The numerous examples of "resolutions," 947-950, must be held to prove conclusively that in these cases the modern (sh) sound was unknown or at least unrecognized. See the remarks on fashion, p. 949, col. 2, last entry, and p. 955, and on resolution, imagination, p. 953.2

Initial K, G, in kn, gn, was certainly pronounced, and initial WR was probably (rw), but may have been (w'r). There is, however, no internal authority for this conclusion, but on the other hand no puns

such as: knave nave, write rite, against it.3

Vowers present greater difficulties, and must be considered more in detail.

A was certainly either (aa, a) or (aah, ah). It could not have passed into (ee, e), and still less into (ee, e). The puns with A, p. 923, and the rhymes on A, p. 955, independently of external tes-

timony, can leave no reasonable doubt on this point.4

- AI, AY, present much ground for hesitation. They must now be distinguished from ei, ey, with which Salesbury confounds them, while Smith makes the difference slight. After Gill's denunciation of Hart's pronunciation of ai, ay, as (ee), p. 122, we cannot admit that sound as general in Shakspere's time, notwithstanding the presumption in favour of Sir Philip Sidney's use of (ee), p. 872, and the obscurity of Mulcaster, p. 912. Wallis and Wilkins, who are both later, and both apparently said (ei), confirm this opinion. see by puns that the pronunciation (ee) was well known to Shakspere, but we cannot fix it in more than two or three cases. The remarks on p. 924 justify the retention of (ai) for general purposes, that is, the acceptance of Gill's practice. See also supra p. 474, note, col. 2.
- ¹ Messrs. Noyes and Peirce (supra p. 917, n. 1) say, "The sound of this guttural must have been atonic and faint, for Baret, Smith and Jonson make it equivalent to h . . . Its sound must have been disappearing in Shakespeare's time, for in 1653 it was a provincialism (Wallis, p. 31). . . It is probable that f was frequently substituted for gh." See supra pp. 963, 967.
- ² Messrs. Noyes and Peirce "conclude, -1st that -tion, -sion, are dis-syllabic, but could be contracted to one syllable; and, 2nd, that they had nearly, if not quite, the modern French sound."—See Gill's remarks on synæresis, suprà p. 937, and n. 3.
- Messrs. Noyes and Peirce say "k before n, and w before h, would seem to have been invariably sounded."

4 The short a is considered to have been (æ) by Messrs. Noyes and Peirce, who, relying principally on Wallis, say that "in this case, it is a defect in Gill's system, that it does not distinguish between the a in 'cat,' and that in 'cart.'" But as regards a long, they consider it had " a sound nearly like ale," and then stating that this a, "as now sounded, ends with a very short i sound," conclude that this was not the case then, and seem, on the authority of Wallis, to make it (ææ). The case of long a = (AA) they consider under AU, see the next note but one.

⁵ Messrs. Noyes and Peirce conclude that "ai was a true diphthong, more resembling our a long than our i long,"

meaning probably (ææi), which would not be quite the same as our a long,

which they consider to be (eei).

AU, AW, ought to be (au) if ai=(ai). But the usage of language is independent of such analogies, and changes may be complete in one case, but not in the other. Hart finds no difficulty in pairing (ee, au), and Gill, though he wrote (au), apparently meant (AA), p. 145. But he evidently hesitated at times between (au) or (Au) and (AA), for he says, referring to "Hall Henriculus, hale trahere, et hall aula," that "exilius est a in duabus vocibus prioribus, in tertiâ fere est diphthongus." Compare a similar expression respecting the undoubtedly diphthongal long i, suprà p. 114, l. 10 from bottom. The (au, au, au) have the true archaic stage twang, and each of them may be occasionally heard, at least before (1), from modern declaimers. Still as I have felt constrained to accept (AA) as the most probable representative of Dr. Gill's use, and as Ben Jonson, the friend and contemporary of Shakspere, seems to have had no notion of any diphthongal sound (suprà p. 146), I have adopted (AA) in Shakspere. There is at least one rhyme, la! flaw, p. 957, which favours this supposition, though it would be quite inadequate to establish it. Puns give no results, p. 923.

E, followed the rule of (ee, ii, e) given suprà pp. 225, 227. There was, however, occasionally a tendency to mince it into (i) when short, compare the puns: elept clipt, civil Seville, p. 925, and the rhymes p. 958. This mincing became very prevalent in the XVII the and XVIII the centuries, but is inadmissible as an acknowledged pro-

nunciation in stately verse.2

1 Messrs. Noyes and Peirce, after a long investigation, say: "We must endeavour to explain our facts on the presumption that its sound [that of au] underwent no change. Now this can only be done by supposing that the French a, from 1620 to 1690, represented such a sound as might at once be described as 'daunt' and be made equivalent to 'dawn.' Such a sound is, perhaps, given to 'balm' in Georgia and Alabama." By daunt, daun, I suppose these writers mean (aa, AA); by the last-mentioned sound of balm, they possibly mean (aa). They proceed thus: "Soon after 1690 it took another step in the same direction as that which was taken after the wars of the Huguenots, perhaps, and now bore no resemblance to the a in father. It appears, however, that this change had not struck completely into the provinces; for, as the Revolution gradually passed off, this orthoepy also died out, and left the pronunciation as it was during the reign of Francis I. If we accept this theory, our conclusion respecting the English aw will be that it was always pronounced as at present," that is (AA). They incidentally

call the pronunciation of dance as (dæns), which is thought refined by many English speakers, "a prevalent vulgarism" in America. On the sound of French a, see suprà p. 820, and on the English conception of the sound so late as the end of the xvirith century, see Sir William Jones's English spelling of French, suprà p. 835. At present there is a great tendency in French to make the sound very thin. The use of (aa) is disliked, and the short sound has dwindled from (a) to (ah), on its road, apparently, to (æ), precisely as in older English. See Tito Pagliardin's Essays

on the Analogy of Language, 1864, p. 6.

Messrs. Noyes and Peirce say that e short "has undergone no perceptible change." And of the sound of e long, as in Eve, deer, they say: "There can be no doubt that this sound was heard in almost all the words where it now occurs, including 'people' and 'shire' in combination, for Gill gives to all these words the long sound of the short i. The principal exceptions were words in ea, several in es, Casar, cedar, equal, fierce, Grecian, interfere, these, etc., which had the peculiar sound of ea," explained in the next note.

EA was mostly long (ee) and occasionally short (e). We must here accept the external testimonies, which are clear and distinct. The rhymes, p. 957, are singularly inconclusive as respects the length of the vowel. The rhymes of ea with ee, pp. 957-8, are all clearly false. A few words had the sound of (ii), p. 81. The vocabulary must be consulted for the authorities. All such usages were clearly orthographical mistakes or disputes, the appropriation of ea to long (ee) at the close of the xvith century not having been universally recognized. In heart, heard, the sound of (a) prevailed, see the puns p. 925, but see also the rhymes p. 964, col. 1, and p. 965, col. 2. For the interchange of the sounds (iir, eer) in the terminations -ear, -ere, see the rhymes p. 964, col. 2. In these cases there is no choice but to follow external authorities.1

EE must be regarded as always intentionally (ii).2

EI, EY, ought to have followed the fortunes of ai, ay, with which we have seen they were once interchangeable. Gill is not consistent. He marks prey as (prai), suprà p. 900, but in they he uses (ei, eei), and in receive, conceive simple (ee). The rule that where ei is now (ii) it was then (ee), and where it is now (ee, eei) it was then (eei), will not be far wrong. Neither rhymes nor puns help us here. Hart's ordinary orthography, as shewn by his own MS., suprà p. 794, note, proves that ei was to him identical with (ee).3

EO had become (ii) in people, and perhaps in yeoman, of which the modern sound (joo men) is clearly erroneous. We find leopard trissyllabic, He 1, 5, 5 (475, 31), supra p. 947. The combination is very rare, and there is nothing to be gleaned from rhymes or puns.

EU, EW, if we believe external testimony, were clearly (eu) or (yy), and this view will be adopted. See the observations on the rhymes which apparently militate against this conclusion,

p. 962.4

I, Y, long will be assumed as (ei). Smith and Shakspere identify I, eye, aye, pp. 112, 926, 963. For Gill's sound Wallis's (ei) has been adopted, but the more indeterminate (ei) has been retained in Shakspere. The short I was of course (i). But rhymes present difficulties. We have a few cases of long I and short I rhyming in closed syllables, pp. 958-9, some of which must be esteemed false, but in

1 Messrs. Noyes and Peirce say that "Mr. Marsh, looking at the grammars, at once discovered that it [the sound of es] was neither the one [long s] nor the other [double es], but an inter-mediate sound, like s in met prolonged. [This gives (ee) exactly.]... When ea is found rhymed with ai, it is owing to a common mispronunciation of the latter diphthong noticed by Gill." Shakspere's rhymes of ea with ai, are so rare as to be quite valueless, coming under the category of consciously imperfect rhymes, supra p. 956. Even Sidney's, were not frequent, p. 872. ² Messrs. Noyes and Peirce do not

treat this combination independently

of long e.

3 Messrs. Noyes and Peirce say, "the ei in receive, deceive, etc., was a diph-thong in Gill's time,"—these two words are, however, exceptionally pronounced with monophthongal (ee) by Gill,-"it was used interchangeably with ai, as both Smith and Mulcaster observe." See suprà p. 120 for Smith, and p 912 for Mulcaster.

4 Messrs Noyes and Peirce say that "eu differed from u in 'use' apparently in beginning with the vowel 'end' instead of the consonant y." See below

p. 980, n. 2.

others there may have been a variety of pronunciation. The termination -ind seems to have been generally (eind), corresponding to the modern pronunciation. The final -Y, however, offers the same varieties of rhyme as in Spenser, p. 869, and in modern verse, p. 861. There are occasional rhymes with (-ii), p. 959, col. 2, but many more numerous examples of rhymes with (-ei), p. 959, col. 1, without any reference to the origin from French -é, -ie, or Anglo-saxon -iz. As Gill constantly adopts the pronunciation (-ei) in such cases, I shall follow his lead. Compare the puns on noddy, marry, p. 926.

IE, when not final, was probably (ii), according to the external authorities. When medial, it was still a rare form, and had not regularly replaced ee, p. 104; friend, fiend, were probably (frend, fend), see the rhymes, p. 958. When final, it was generally (ei) accented, and (i) unaccented, see Mulcaster's remarks, supra p. 913, col. 2.

O long and short must be generally assumed as (oo, o), compare the rhymes, pp. 959, 960, and the puns, p. 925. Before *l*, long o becomes (oou), according to Gill. Shakspere in his rhymes disregards the difference (oo, oou), p. 960. We must, therefore, follow external authorities. Long O was also occasionally (uu), compare the puns,

¹ Messrs. Noyes and Peirce say of i in in, that "words to which we now give this sound had in general the same pronunciation in Shakespeare's day." On the long i, they first remark on the gliding characteristic of diphthongs, referring to Mr. J. Jennison in Hil-lard's Reader: "None of our diphthongs are combinations of two vowels, but run from the first sound to the last through an infinite number of gradations. 'Ice,' according to this view, instead of being ah-ee, is more nearly ah, ap, err, end, in, eve,' that is, instead of (ai), is more nearly (asweii). "But it is not to be supposed that any abrupt change was made from the Saxon i long to this very complex combination. It is more rational to suppose that the sound grew up by insuppose that the sound grew up by insensible gradations somewhat in this manner," translating the symbols, they become (1. i, 2. ii, 3. eii, 4. œeii, 5. əweii, 6. aəweii). Then quoting Palsgrave as supra pp. 109, 110, they say: "The unmistakable drift of these citations is to the effect that the tions is to the effect that 'ice' was pro-nounced like i in 'wind,' or perhaps 'end-in-eve,'" that is, as (i)? or (eii)? Further on they say, "the Palsgravian pronunciation of 'ice' in words where the i is now sounded long, appears to have been confined with Mulcaster to a few words ending in nd. Wind, frind, bind, he laconically remarks, 'and with the qualifying e, kinde, finde,' etc. (Elementarie, p. 133). [Suprà p. 913.] So Coote, who, however, like Gill, preferred the longer pronunciation in all words of this class, not excepting 'wind.' 'And some pronunce these words blind, find, behind, short: others blinde, finde, behinde, with e, long,' (Coote, p. 19)." They adopt (a) as Gill's j or long i. These conclusions are not sensibly different from mine. In this relation, the following observation of Ben Jonson, alluded to by Messrs. Noyes and Peirce, shewing apparently that he recognized both sounds (mais mees; lais lees), is noteworthy: "Many words ending in Dipthongs, or Vowells, take neither z. nor s. [in the plural,] but only change their Dipthongs or Vowells, retaining their last Consonant: as Mouse. Mice, or Meece. Louse. Lyce, or Leece. Goose, Geece. Foot, Feet. Tooth. Teeth." B. Jonson, Gram. Chap. XIII. But from the same writer conjugating "Pr. Lye. Pa. lay. Par. pa. lyne or layne," we cannot conclude that layne was pronounced by any one like lyne, but that lyne was a form which he preferred, as one may see from his conjugating: "Pr. Fly. Pa. flev. Par. pa. flyne or flowne," where flyne could never have been the pronunciation of flowne. B. Jonson, Gram. Chap. XIX.

p. 925, and the rhymes in -ove, and of long o with oo, both on p. 961. On the other hand, short o often rhymed with (u), and was frequently so pronounced (compare the puns, p. 926), though some of the rhymes, especially those in -ong (p. 962), are undoubtedly false.

OA seems to have been regularly (oo).

OE is only (oo).

OI, OY will be taken as (oi) or (uui), according to Dr. Gill's usage. When there is no immediate authority, the pronunciation (ui) or (oi) in the xvII th or xvIII th century, may be held to imply a xvI th century (ui) or (uui), suprà p. 134, l. 1, and p. 473, note, col. 2, and infrà p. 992, note 2, and p. 995, note 3. The rhymes, p. 963, are not at all conclusive, but seem to indicate an unsettled pronunciation.²

00 was regularly (uu), but there are a few rhymes with long

u, see p. 963.

OU, OW, had of course the two sounds (ou, oou), but Shakspere quite disregarded the difference between these two diphthongs in rhyme, p. 961, and also the difference between (oo, oou), p. 960. In a few instances he has even rhymed (oo, ou), p. 961. It would of course be wrong to conclude from these rhymes that he did not differentiate the sounds (oo, ou), which have been so carefully distinguished in speech down to the present day; and even, though (oo) and (ou) are now beginning to coincide, in an unrecognized pronunciation of long o, the cases of (oo, ou) are kept apart as (oou, ou) or (ou, au). Hence I shall here follow my external authorities.

1 Messrs. Noyes and Peirce do not seem to be acquainted with the common English provincial and Scotch sounds (oo, o), although they know (oo, o), the short (o) being the "Yankee pronunciation of 'whole' and 'coat'." Finding that in Wallis the pronunciation of short o was (A) or nearly (o), they leave the point in doubt whether Gill may not really have paired (00, A) in error, and have meant those sounds by his ö, o. The long o they take without any aftersound or "vanish," that is, as (oo) not (oou). But the diphthongal o before l, and ou, ow, which are now professedly (oo), they assume "must have been the same with which the Irish now pronounce the word bold." I have not had an opportunity of strictly analyzing the Irish sound, but it appears to me to be rather (ou), or (ou), with a short first element, than (oou), or (oou), with a long first element. It is probably the same sound as orthoepists in the xviii th century analyzed as (Au, ou), suprà p. 160. But if so, it is more nearly the closed sound of ou than the open sound, that is, nearer (ou) than (oou). Messrs.

Noyes and Peirce do not seem to notice

the (uu, u) sounds of o.

² Messrs. Noyes and Peirce recognize
the double sound of oi, and quote the
passage from Muleaster, suprà p. 915.

These distinctions are recognized by Messrs. Noyes and Peirce, who, however, infer from the passages quoted from Mulcaster, suprà p. 914, that he agreed with Bullokar and Palsgrave in pronouncing ou as (uu), where most writers gave (ou), just as when i preceded nd he at least occasionally pronounced (i), and not (ei, ei), suprà p. 913. They also imagine that Shakspere may have occasionally played on the pronunciation of fowl as fool. Mr. Noyes, in a private letter, thinks that the reading foule found in three quartos in H⁴ 4, 2, 7 (402, 21), which is foole or fool in all the other authorities, arose from this source, and that fool is the better reading. The words would then thus run: "such as fear the report of a caliver worse than a struck fool or a hurt wild duck," where this sound would create an obvious pun. But we have no examples of indisputable puns of this sort.

U long must be taken on external authority as (yy). See remarks on the pun you, u, p. 926, and on the rhymes, p. 962. There is of course just the chance of an (iu) pronunciation, which we know existed, not only from Holyband's express assertion (suprà p. 228, note, col. 1, and p. 838), but from the impossibility of otherwise accounting for Wilkins's ignorance of (yy), p. 176. Still the testimony of Gill and Wallis is so distinct that we should not be justified in assuming any but (yy) to be the received pronunciation. But U short was either (u) or (u). The puns or allusions moody, muddy, p. 926, strongly confirm this. None of the rhymes, p. 962, are convincing.

UI receives no light from the rhyme voice juice, even when supplemented by Hodges's confusion noted on p. 963, col. 1, and the

conclusions of p. 136 will be adopted.

1 The possibility of Wallis's (yy) and Wilkins's (iu) coexisting, without either noticing the difference of pronunciation in the other, though both were in frequent communication, is established by the following fact. In Norfolk two, do, are constantly called (tyy, dyy), as I know from personal experience, and much concurrent information. The gentleman who supplied Prince Louis Lucien Bonaparte with a specimen of the dialect, repudiated this sound, and only allowed the existence of (tiu, diu), sounds of which I am ignorant. But I have noticed a con-fusion between (yy, 22) here as else-where. Again, it is generally asserted that in Devonshire they call moon (myyn); but Dr. Weymouth, a Devon-shire man, denies the fact, and his pronunciation is (moon), as nearly as I could judge. The sounds (so, yy) are constantly confused. See remarks on the Devonshire pronunciation of oo, suprà p. 636, note. Kenrick, in his Dicsuprà p. 636, note. Kenrick, in his Dictionary, 1773, p. 39, identifies a quickly spoken u with the French sound. Even as late as 1775, Joshua Steele heard French u or (yy) in superfluous, tune, supreme, credulity, though he states it to be "very rare in English," and "seldom or never sounded . . . except in the more refined tone of the court, where it begins to obtain in a few words." Prosodia Rationalis, pp. x. and xii Prosodia Rationalis, pp. x. and xii. See below Chap. X. I heard (yy) pronounced in purify in 1870, from the pulpit. Attention should also be paid to an extremely difficult provincial diphthong, common in the Peak of Derbyshire, Westmoreland, and Cumberland, and probably in many parts of the north of England, which replaces long u. At first a Southerner takes it for (iu), then he is apt to consider it simply (yy) or (w) or (uv), according to his familiarity with these sounds. I have not yet been able to analyze it satisfactorily, but it appears to me to partake of such characters as (yu, yu, uu). The first element of diphthongs is notoriously difficult to seize, even when the diphthongs are extremely familiar (suprà p. 108), and hence the uncertainty of this sound, which may perhaps be provisionally received as (yu). Yet Mr. Thomas Hallam (suprà p. 473, n. 1, col. 2), from whose pronunciation I endeavoured to analyze the sound, himself analyzed to analyze the sound, himself analyzed take (uu), which did not satisfy my ear, although the corresponding diphthong (ii) for (ii) seemed, after much observation, sufficiently established. It is possibly to some such intermediate diphthong that all the confusion between (yy) and (iu) is to be traced.

² Messrs. Noyes and Peirce say: "the pronunciation of 'use' is described with some unanimity as that of the French u, as indeed it may well have been once; but that certainly was not its sound in Shakespeare's day, for Baret describes it in terms of more than ordinary clearness as being a diphthong compounded of e and u." But see the passage quoted and remarks on it, suprà p. 168. The short u Messrs. Noyes and Peirce fully recognize as (u) or (u), which of course they do not distinguish.

Any deviations from these customs must have special external authority; and when any combination has two values, either the same authority must be sought, or its place supplied by analogy, derived from observing the direction of change in similar words (pp. 225-240). The usual variations in the orthography of the xvi th and early part of the xvii th century must of course be allowed for. We have no specimens of Shakspere's own orthography except his own signature, and no reason to suppose that it would have been more systematic or regular than that of the other literary men of his time.1

¹ For the printed orthography of Shakspere's works, the remarks of Salesbury (supra p. 752 and note 3) should be borne in mind. We have seen that Sir John Cheke attempted a systematic orthography in MS. (supra p. 877, note). Mr. Francis Fry, F.S.A., author of an elaborate Description of the Great Bible of 1539, &c., &c., and editor of a fac-simile reproduction of Tyndale's first edition of the New Testament, 1525 or 1526, and other works, has recently called special attention to a curious and very rare edition of Tyn-dale's New Testament, of which a mutilated copy will be found in the British Museum (press-mark C. 36. a, described in the Catalogue of Bibles, part 13, fo. 1384), and a nearly perfect copy at Cambridge, of which the second title (the first is wanting) runs thus, according to Mr. Fry: "The NEWE TESTAMENT, dylygently corrected and compared with the Greke by WILLYAM TINDALE: and fynesshed in the yere of oure Lorde God A.M.D. and .XXXV." While this sheet was passing through the press, I received Mr. Fry's printed alphabetical list of nearly 300 words in

this edition, whose orthography differs so materially from that used for the same words in the edition of 1534, that Anderson (according to Mr. Fry), in his Annals of the English Bibles, 1, 456, says, it is supposed to be Gloucestershire dialect, and that the Testament was intended by Tyndale (who was born in Gloucestershire, about 1477), for the ploughboys of that county, whom he said, about 1520, he would make to know the Scriptures better than the priests. On examining the list of words furnished by Mr. Fry, and comparing the spelling with the older pronunciations in the preceding Vocabulary (pp. 881-910), we find the following results, neglecting a few doubtful cases.

a few doubtful cases.

AE = (aa) in: aege, baebes, braeke, caege, caeke, caese, chaest, desolaet, facre, facse facce, facther, gaesinge, gaeve, graece, haest haestily, haet, haeth, haeve, haeven, laede, lacke, laeme, laetely, maede, maeke, maekinge, naeked, naeme, parttaeker, plaece, plaetes, raege, raeted, raether, saefe, saeke, saeme, saeved, saeveour, scaepe, shaeke, shaeme, shaepe, spaece, spaeke, taeke, taeme, taest, awacke, waere, waest, waested.

AEL = (aul) in: caelinge, facle, faelsly, shaell, taelked, waelke.

AE = (a) in: accompanyinge, aengell, maed, maesters, paert, rewarde, saete,

The pronunciation founded on these conclusions, and realized in the following examples, may at first hearing appear rude and provincial. But I have tried the effect of reading some of these passages

vincial. But I have tried the effect taecklynge, vyneyaerde, waetch, wraeth (all probably errors).

AEY = (ai) in: abstaeyne, afraeyde, agaeyne, captaeyne, certaeyne, chaene (an error for chaeyne), claey, complaeyners, consaeytes (possibly an error for consactes), contaeyned, daey, dekaeye, faelye (an error for faeyle), faeynt (also by error faeont), faeyr, faeyth, fountaeyne, gaeye, haeye, laey, laeyde, laeye, maeyntayne, maeyste, marvaeyle, mountaeyne, naeye, obtaeyned, paeyed, paeyer, paeyne, paeynted, plaeyne, praeyed, praeyer, praeyse, raeigne (an error for raeygne), raeylinge, raeyment, raeyne, raeyse, sae (an error for saey), saeyde, saeylinge, saeyled, saeynctes, straeyte, taeyles, trevaeyle, unfaeyned, vaele (an error for vaeyle), vitaeyles, waele (an error for vaeyle), waeyght, waeyte.

AE = (ee) or (e) is probably an error for waeyle, waeyght, waeyte.

AE = (ee) or (e) is probably an error for waeyle, waeyght, waeyte.

AE = (be) or (e) is probably an error for waeyle, waeyght, waeyte.

AE = (ee) in aedeth, paerle, percaeve, swaerdes, ware (= where, an error for wear?), waepens.

EE, EA, present no peculiarities, but EAE = (ee) is used, perhaps by error, in: greaet, and EY in agreyment may be an error.

IE, YE, are rarely, probably by error, = (ei) in: abvede, bliend.

OE, sometimes alternating with OO, OA, = (oo) in: abvede, abroed, accoorde, almoest, aloene aloone, aroese, cloeke, attoenment, boet, boethe boothe, eloethe, coele, coete cootes, decar(=door?,) hoeme hoome, hoepe (moane is probably an error for moene, moone), noene noane, oethe, poele, roebe, roese, smoete, soelyke, spoeken, stoene stome, thoese thoose, toekens, troede, whoem whoom, wroete.

OEL = (ooul) in: behoelde, boeldely booldly, coelde, foere, hoeld.

Now the first inspection of such a list leads to the notion that a systematic spelling was attempted (failing of course occasionally), by which long a, e, i, o, u were to be expressed by ae, ee, ie, oe, ue, exactly in accordance with Mr. E. Jones's most recent attempt at improving English spelling (supra pp. 590-1 and notes), and hence that Tyndale's and Cheke's spellings should be placed in the same category. There could have been no attempt at exhibiting rustic pronunciation, because of the close agreement with the accepted literary pronunciation of the time. But an

inspection of the book itself leads to a very different conclusion. Had the author had any systematic orthography in view, it would certainly have pre-dominated, and examples of the ordinary orthography would have appeared as misprints. But the book presents just the opposite appearance. The curious orthographies do not strike the eye on reading a page or two, except as occasional errata, and Mr. Fry's list is the result of a laborious search. The word maester is said to be nearly the only one which is used with tolerable uniformity, and this might have been used for maister, a common form (p. 996, n.). But the systematic character of the spelling, which is clear from the above arrangement, renders it impossible to consider these spellings as merely accidental errors of the press. That they are errors which had been only occasionally committed, and had probably been very frequently corrected in the first proofs, is palpable, but there must have been some special reason for the compositor's committing them. Now the book was most probably printed at Antwerp, and Tyndale was then a prisoner in Flanders. One of the compositors employed on this particular edition may have been a Fleming, with a good knowledge of English, but apt not seldom to adopt his own orthography in place of the English, to represent his own English pronunciation. This supposition would be sufficient to account for his frequently using the Flemish ae, oe, oo, ue, for (aa, uu, oo, yy). That he occasionally used oe for (oo), notwithstanding its Flemish use for (uu), may have been due to erroneous pronunciation, to which also must also be ascribed the use of ae for (a) and of ael, oel, for (aul, ooul). We must suppose that his errors were generally seen and corrected at press, but were not unfrequently overlooked, as they might be by the best press readers, and were sure to have been by such careless ones as those in the xvith century. This hypothesis seems sufficient to account for the phenomenon, though its establishment would require a more laborious examination of the printed text than it seems to be worth.

to many persons, including well-known elocutionists, and the general result has been an expression of satisfaction, shewing that the poetry was not burlesqued or in any way impaired by this change, but, on the contrary, seemed to gain in power and impressiveness. Yet, though every real lover of Shakspere will be glad to know how the grand words may have sounded to Shakspere's audience, how he himself may have conceived their music, how he himself may have meant them to be uttered and win their way to the hearts of his audience, it is, of course, not to be thought of that Shakspere's plays should now be publicly read or performed in this pronuncia-The language of the xvi th century stands in this respect on a totally different footing from that of the xIV th. Chaucer's verse and rhyme are quite unintelligible, if he is read with our modern pronunciation.1 Hence the various "translations" or rather "transformations" of Chaucer perpetrated by Dryden, Pope, Lipscombe, Boyce, Ogle, Betterton, Cobb, etc., and more recent attempts at a "transfusion of Chaucer into modern English," in which the words of the original are preserved so far as the exigencies of rhyme and metre, according to xix th century notions, permit.2 But even then the effect of the new patches on old garments is painfully

The one point of importance to the present investigation is that the orthographies were not due to Tyndale's, or any English system. As due to a Fleming's involuntary system, they would, so far as they go, confirm contemporary English authorities, and hence are so far useful to us.

1 Mr. Payne, in his paper on "The Norman Element in the Spoken and Written English of the x11 th, x111 th, and xiv th Centuries, and in our Provincial Dialects," just published in the Transactions of the Philological the Transactions of the Philological Society, has many criticisms on the theories of pronunciation here adopted, which have been partly noted, supra pp. 581-588, and will have to be fur-ther considered in Chap. XII.; but as he has given a specimen of the pronunciation of Chaucer which results from his researches, it is convenient to reproduce it here, without comment, for comparison with that on p. 681, and Rapp's on p. 676. The original is also in palaeo-type. Mr. Payne has obligingly revised and corrected the proof of this copy. and corrected the proof of this copy, whan dhat aprill | with -is shuur-es swoot dhe druut of martish | math pers ed te dhe root and baadh ad evri veen | in switsh likuur-of whith vertuur | endzhen-dred is dhe fluur whan zefiruus | eek with -is sweet v breeth enspiir ad math | in evri nolt and neeth dhe ten der krop vs. | and dhe ruq v sun nath in dhe ram | -is nalf v kuurs irun-and smaal v fuul vs. | maak vm mel odii: dhat sleep un al dhe niit | with oop un ii soo prik vth -em netuur | in nor kuraadzh vs. dhan log vm folk | tu goon on puigramaadzh vs. dhan loq en folk | tu goon on paigramaadzh us

² The Poems of Geoffrey Chaucer modernized, London (Whitaker), 1841, 8vo. pp. cxlvii, 331.—The modernizers are various. The Prologue, Reve's and Franklin's Tales by R. H. Horne, the Cuckoo and Nightingale and part of Troilus and Cresida by Wm. Wordsworth, Complaint of Mars and Venus by Rob. Bell, Queen Annelida and the false Arcite by Elizabeth B. Barrett, the Manciple's, Friar's, and Squire's Tales by Leigh Hunt, etc.

The initial lines of the Prologue are thus rendered by Mr. R. H. Horne, the italicized words being introduced for the sake of "modernization," see the

revised text, suprà p. 680.

When that sweet April showers with downward shoot

The drought of March have piere'd unto the root,
And bathéd every vein with liquid power,
Whose virtue rare engendereth the flower;
When Zephyrus also with his fragrant

breath
Inspired hath in every grove and heath
The tender shoots of green, and the young

Hath in the Ram one half his journey run, And small birds in the trees make melody, That sleep and dream all night with open

eye; So nature stirs all energies and ages That folks are bent to go on pilgrimages, apparent. The best of them breathe a modern spirit into the dead giant, and by a crucial instance shew the vanity of attempting to represent the thoughts of one age in the language of another.

Shakspere's metre only rarely halts in our present utterance,although it does halt occasionally from not attending to "resolutions" (see remarks on banished, suprà p. 948, col. 1),-and his rhymes are so far from being perfect, as we have seen, that the slightly greater degree of imperfection introduced by modern utterance is not felt. His language, although archaic enough in structure to render the attempts of imitators ludicrous, is yet so familiar to us from the constant habit of reading his plays, and the contemporary authorized version of the Bible, that it does not require a special study or a special method of reading, by which silent letters are resuscitated. essentially our household poet, Shakspere will, and must, in each age of the English language, be read and spoken in the current pronunciation of the time, and any marked departure from it (except occasional and familiar "resolutions," sounding the final -ed, and shifting the position of the accent, which are accepted archaisms consecrated by usage,) would withdraw the attention of a mixed audience or of the habitual reader from the thought to the word,

And palmers for to wander thro' strange

And paimers for we seem strands;
strands;
To sing the holy mass in sundry lands;
And more especially, from each shire's end
Of England, they to Canterbury wend,
The holy blissful martyr for to seek,
Who hath upheld them when that they were

Mr. Horne's introduction gives an account, with specimens, of former paraphrases, and an "examination of the versification and rhythm adopted by Chaucer," (pp. xxxvii-xci) written by a man who has evidently a fine sense of rhythm and a sacred horror of mere scansionists. It is well worth perusal, as antidotal to Mr. Abbott's theories, suprà pp. 940, 944. Thus on Prologue v. 184-5 (suprà p. 690) he remarks: "The words 'study and 'are thus to be pronounced as two syllables instead of three; and the four syllables of 'cloister alway' are to be given in the time of three syllables. Yet, be it again observed, this contraction is not to be harshly given; but all the words of what we may term the appoggiatura [a most happy expression, giving to a musician the whole theory of the usage,] fairly and clearly enunciated, though in a more rapid manner. One of the best general rules for reading such passages, especially when of such vigour as the foregoing, is to read with an un-hesitating and thorough-going purpose, to the utter defiance of old metrical misgivings, and that thrumming of fingers' ends, which is utterly destructive of all harmonies not comprised in the common chord. This rational boldness will furnish the best key to the impulse which directed the poet in writing such lines," p. lxxxiii. The following examples of trissyl-

labic measures in modern heroic verse are borrowed from this introduction, such measures being italicized.

would cross old associations, would jar upon cherished memories, and would be therefore generally unacceptable. Hence all recent editions of the English Bible of 1611 and of Shakspere's Plays and Poems (when not avowedly facsimiles), adopt the current orthography of the time, into which has slipped the change of whan, than, then into when, then, than. A similar attempt has been recently made with Chaucer, but it is not so easy, many of the words having no modern spelling (suprà p. 403, note), and the necessity for adding on and sounding final e's, and shifting the place of the accent, for no apparent purpose but to make the lines scan, has a traily weakening effect, which maligns the fine old rhythms.

¹ The Riches of Chaucer; in which his Impurities have been Expunged, his Spelling Modernized, his Rhythm Accentuated, and his Terms Explained. Also have been added Explanatory Notes and a New Memoir of the Poet. By Charles Cowden Clarke, crown Svo., pp. xvi, 625, London (Lockwood), 2nd edition, 1870. The difficulty arising from words having no modern form is evaded by retaining the old form, and giving an explanation in footnotes. The spelling is occasionally not modernized at all. The Prologue commences thus: Whenné that April, with his showrés sote,¹ The drouth of March hath piercéd to the rote,² And bathéd every vein in such licour, Of which virtúe engendred is the flow'r; When Zephírus eké, with his soté¹ breath Inspiréd hath in every holt³ and heath The tender croppés: and the youngé sun Hath in the Ram his halfé course yrun, And smallé fowlés maken melody, That sleepen allé night with open eye, So pricketh them natúre in their courâges,⁴ Then longen folk tog on pilgrimages, And palmers for to seeken strangé strands, To servé hallows⁵ couthe in sundry lands; And 'specially from every shire's end of Engleland to Canterbury they wend, 'The holy blissful martyr for to seek That them hath holpen when that they were sich.'

1 Sote—sweet. 2 Rote—root. 3 Holt—grove, forest. 4 Courages—hearts, spirits. 5 Hallows—holiness. 6 Couth—known. 7 Wend—go, make way.

As part of his justification for changing Chaucer's spelling (or rather that of the numerous scribes) into a modern form, Mr. Clarke says that Chaucer "would even, upon occasion, give a different termination to them [his words], to make them rhyme to the ear in the first instance. An example of this, among others, occurs in the Clerk's Tale, line 1039" of his version, Tyrwhitt's and Wright's editions, v. 8915, "where the personal pronoun me is altered into mo, that it may rhyme with also," p. v. This charge is taken from

Tyrwhitt's note, and is absurd on the face of it, for those who have dabbled in rhyme know that the first word in a rhyme is generally chosen to rhyme with the second, and not conversely. In the present case the weak also, which is not in the Latin original, was evidently inserted for this reason. On reading the context, every one will see that Griseldis, though she meant herself, was careful not to name herself, and hence used mone more, many, others, as an indefinite. The passage, as contained in the Univ. Camb. MS. Dd. 424, runs as follows, with Petrarch's Latin annexed, in which also an indefinite alteram is used, and not me, although there was no stress of rhyme. O thyng byseke I jow | and warne also That | e ne pryke | with no turmentynge This tendre Mayde | as | e han don moo.

Latin-

Vnum bona fide precor ac moneo ne hanc illis aculeis agites quibus alteram agitasti.

So much importance had to be attributed to Chaucer's rhymes in this work, that it was necessary to point out the error of Tyrwhitt and Clarke in this instance. The limits of Chaucer's habits of varying forms for the sake of rhyme arraying super super 254

of rhyme are given, suprà p. 254.

The objections to modernizing the spelling do not apply to prose works, such as Sir Edward Strachey's Globe edition of "Morte D'Arthur," 1870, because there is no occasion to insert the final e, or change the position of the accent, and there is no rhyme to be murdered. It was also possible in this case to insert a more usual for a less usual word, without sacrificing the metre. This book is a favourable specimen of what can be done to modernize the appearance without modernizing the spirit of an old prose writer, and bring him into many hands which would have never taken up the original.

1 Gill's pronunciation of igh as (eikh) is adopted, so far as the vowel is concerned, in place of Salesbury's (ikh), on account of the rhymes light bite, right spite, might spite, etc., supra p. 963. For the same reason, the (kh) has been reduced to (H), supra p. 975.

4 (Tem poraal) is due to the rhymes fall general, etc., p. 956. (Pou er) is written to shew the syllabic r, p. 951.

5 (Madz estei) after Gill, and on account of the frequent rhymes of -y with

(ei), p. 959. 6 Cheke and all modern orthoepists write a long vowel in the second syllable. Bullokar's short vowel is probably due to a mistaken etymology. The word is not ags., (suprà p. 394.) Orrmin always writes it with a long vowel, -fore, and forr with a short vowel. Mätzner, Eng. Gram., 22, 370, quotes it frequently in the divided form, per foren, meaning evidently, that being before, i.e. in consequence of that. The old forpi split up into the two modern forms because, and therefore.

1 This is adopted, in place of the modern perivig, because the quartos generally read perwig, and Miège, 1688, gives the pronunciation (pærwig), which shews that the i in the perivig of the quarto of 1676 was not pronounced. The first and second folios have pery-wig, the third and fourth have perrivig. The pronunciation (periig) given by Jones, 1700, seems, however, to be really still older, as compared with French perruque, and the orthography peruke. The order of evolution seems to have been (per yyk', periig, per wig, periwig, wig); compare modern bus from omnibus, and the older drake, Old Norse andriki, Mätzner, 1, 165; Stratmann, 158.

2 Price seems to give (neiz), suprà

² Price seems to give (noiz), supra p. 134, a xvii th century pronunciation confirmed by a xix th century vulgarism, and indicating a xvii th century (nuiz), which is therefore adopted in the absence of direct authority (p. 979).

3 Notwithstanding the vulgar (thiee-ta), which would imply an older position of the accent, this place is settled by Shakspere himself, see AY 2, 7, 30 (214', 137), KJ 2, 1, 83 (338, 374), R² 5, 2, 6 (377', 23).

- 4 All the folios read or Norman, but the quartos have nor man, which is adopted by the Cambridge editors. Both are manifestly erroneous. As Denmark in this play is at war with Norway, it is possible that Hamlet may have meant to put his enemies into the position of being neither Christian nor pagan, and that the right reading may have been or Norweyan, a Shaksperian word, see M 1, 2, 5 (788', 31); 1, 2, 13 (789, 49); 1, 3, 35 (790, 95), and easily confused by a compositor with the better known word Norman, which however occurs in its usual sense in this same play, H 4, 7, 20 (839, 91).
- ⁶ On the insertion of the aspirate in this word, see supra p. 220. There is evidently a play on humanity and the old false derivation ab-homine, so that abhominably = inhumanly.

2 This is Smith's pronunciation, the only authority I have found. It is a legitimate form, from ags. pawon, comparable to (knoou), from ags. pawon, mawon. The modern (than) implies an older (thanu, thau), which, however, is more strictly a northern form.

1 Hanmer transposes within and without, but the result is not very intelligible. All will be clear if we suppose Grumio to have been struck by an unsavoury pun as soon as he uttered Jacks fair, thinking of a jakes, so notoriously foul within. The similarity of pronunciation is gua-

ranteed by Sir John Harrington's "New Discourse on a stale subject, called the Metamorphosis of Ajax," meaning a jakes, 1596. The Jacks and Gills came pat, compare The Babees Book of the Early English Text Society, p. 22, v. 90, "and iangylle nether with Iak ne Iylle," A.D. 1480.
